附录 A : 重要术语 Appendix A: Key Terminology	99
附录 B : 活动准备指南 Appendix B: Activity Preparation Guide	102

致谢 :

过去十多年来，无数咖啡专业人士以及优秀教育工作者贡献了宝贵的时间与专业知识，致力推动精品咖啡协会 (SCA) 认证教育计划。以下专业人士贡献并验证此感官品鉴课程教材 2.0 版的教材：Ian Picco、Edouard Thomas、Brandon Bir、Drew Billups，以及 Gloria Pedrosa。

Acknowledgements:

For more than a decade, countless coffee professionals and gifted educators have contributed their time and expertise to the evolution of the Specialty Coffee Association's certificate education programs. The following professionals contributed to and validated Version 2.0 of course materials for Sensory Skills: Ian Picco, Edouard Thomas, Brandon Bir, Drew Billups, and Gloria Pedrosa.

我们也要感谢担任 AST 高级读者并为此 3.0 版本提供反馈意见的专业人士：Cadence Sim、Joost Leopold，以及 Ludovic Maillard。

We would also like to thank the professionals who served as AST advance readers and provided feedback on Version 3.0: Cadence Sim, Joost Leopold, and Ludovic Maillard.

请注意：本课程指南替代了先前的课程文件，仅供已获得感官品鉴课程认证的讲师使用，请勿将此文件分享给其他的 AST 讲师或学员。

Note: This guidebook replaces previous curriculum documents. This guidebook is only available to authorized trainers licensed in Sensory Skills. Please do not share this document with other ASTs or learners.

1. 一般信息 General Information

课程信息 Course Information

课程长度：最少 14 小时，含实作测验。Course Length: Minimum 14 hours including practical exam

先修课程：无；建议可参加咖啡导论课程、感官品鉴初级课程以及生豆初级课程。Prerequisites: None; Introduction to Coffee, Sensory Skills Foundation and Green Coffee Foundation recommended

笔试信息 Written Exam Information

在线笔试总题数：35 题（每题一分） Total Number of Questions on Online Written Exam: 35 (worth one point each)

在线笔试时间总长：37 分钟 Total Time Allowed for Online Written Exam: 37 minutes

及格分数（在线笔试）：70% Passing Score (Online Written Exam): 70%

实作测验信息 Practical Exam Information

实作测验时间总长：60 分钟 Total Time Allowed for Practical Exam: 60 minutes

及格分数（实作测验）：70% = 答对 37 分 / 总分 53 分 Passing Score (Practical Exam): 70% = 37 points correct / 53 total exam points

2. 课程说明与更新 Course Description and Updates

说明 Description

感官品鉴中级课程内容以初级课程所介绍的概念与技能为基础，相当适合已具有杯测经验、有意开发感官技能及增进感官科学知识的咖啡同好。本课程涵盖众多主题，包括：味道与香气的生理学知识、感官测试法及其应用、杯测会流程、咖啡属性的多样性、使用咖啡风味轮以及 WCR 感官辞典，与如何建置感官课程或评估小组。

The Sensory Skills Intermediate course builds on the concepts and skills introduced in the Sensory Skills Foundation course. It is ideal for someone who has cupping experience and wants to develop their sensory skills and knowledge of sensory science. This course covers a wide range of topics: the physiology of taste and aroma, the types of sensory test methods and their applications, the operation of a cupping session, the diversity of coffee attributes, the use of the Coffee Taster's Flavor Wheel and WCR Sensory Lexicon, and the implementation of a sensory program or panel.

旧版课程更新 Curriculum Updates from Previous Version

旧版课程指南为 2.0 版，本课程指南为 3.0 版。

The previous Guidebook is referred to as Version 2.0. This Guidebook is referred to as Version 3.0.

在 3.0 版中，目标、内容、活动均已依咖啡价值评估的标准与工具予以调整。尽管整体目标维持不变，本课程如今纳入了更多感官科学的重要概念，并确保学员使用 CVA 标准规范以及 SCA 描述性与情感性评估表体验杯测。部分章节已重新排序或改写，以充分诠释并易于理解，给予 AST 的注释也已扩充。

In Version 3.0, the objectives, content, and activities have been adjusted to reflect Coffee Value Assessment protocols and tools. While the overarching goals of the module remain the same, the course now includes more key concepts from sensory science and ensures that learners experience cupping using the CVA Protocol and the SCA Descriptive and Affective Forms. Some sections have been reordered or reworded to improve clarity. AST Notes have been expanded.

所有文件（课程教材）均可至使用者入口网站下载（My AST Portal > My AST Downloads > Course Materials）。

All documents are available in the user portal (My AST Portal > My AST Downloads > Course Materials).

3. 笔试题目分布（按主题） Written Exam Question Distribution by Topic

有关在线测验试题的重要信息详如下表。The chart below outlines key information regarding the online exam questions.

题库：每个主题会用于学员在线测验的试题数量。

Question Pool: This is the number of questions per topic that is available to present to the learner during the online exam.

考题数量：每个主题实际列入在线考试（随机选出）的试题数量，该数量由课程建立者决定，目的是确保各章节和主题所占的比例获适当分配。

Number of Questions Presented: This is the number of questions a learner will randomly receive per topic during the online exam. This number was determined by the course authors to ensure that each section and topic is weighted appropriately.

章节比重：每个章节名称右侧，列有该章节在整份测验中的占比。

Section Weighting: Next to each section title is the percentage of the total exam represented by the questions in that section.

部分主题/目标没有列入笔试中，由于这些信息将在未来课程中派上用场，讲师仍应讲授相关内容。

There are some topics/objectives that are not tested on the written exam. The trainer should still address these topics/objectives as the information will be useful in future courses.

考试章节与主题 Exam Sections & Topics	题库 Question Pool	考题 Questions Presented
2.01 章节 感官评估概述 约 11% Section SENSORY ASSESSMENT OVERVIEW About 11%		
主题 1：感官评估介绍 1 Topic: Introduction to Sensory Assessment	5	1
主题 2：三种感官测试法 2 Topic: Three Sensory Test Methods	6	2
主题 3：咖啡产业中的感官评估 3 Topic: Sensory Assessment in the Coffee Industry	4	1
2.02 章节 生理学以及感官属性 约 18% Section PHYSIOLOGY AND SENSORY ATTRIBUTES About 18%		

主题 1：人类生理学以及感官 1 Topic: Human Physiology and the Senses	4	1
主题 2：神经学、心理学，以及感官感知 2 Topic: Neurology, Psychology, and Sensory Perception	4	1
主题 3：基本味道 3 Topic: Basic Tastes	4	1
	活动 Activity	
主题 4：风味感知中的味道与湿香 4 Topic: Taste and Aroma in Flavor Perception	4	1
	活动 Activity	
主题 5：常见口感感知 5 Topic: Common Mouthfeel Sensations	4	1
	活动 Activity	
主题 6：风味的价值链影响 6 Topic: Impact of Value Chain on Flavor	4	1
主题 7：评估咖啡中的感官质量 7 Topic: Evaluating Sensory Qualities in Coffee	活动 Activity	
2.03 章节 差别测试以及三角杯测 约 15% Section DIFFERENCE TESTING AND TRIANGULATIONS About 15%		
主题 1：差别测试以及三角杯测概述 1 Topic: Overview of Difference Testing and Triangulations	4	1
主题 2：三角杯测的常见应用 2 Topic Common Applications for Triangulation Testing	4	1
主题 3：三角杯测标准规范 3 Topic: Triangulation Testing Protocols	4	1
	活动 Activity	
主题 4：三角杯测统计 4 Topic: Triangulation Test Statistics	4	1
	活动 Activity	
主题 5：差别测试的其他替代方案 5 Topic: Alternative Methods for Difference Testing	4	1
2.04 章节 杯测相关作业 约 11% Section CUPPING SESSION OPERATIONS About 11%		
主题 1：咖啡杯测的概述 1 Topic: Overview of Coffee Cupping	4	1

主题 2：SCA 杯测标准规范的重要名词 2 Topic: Key Terms in the SCA Cupping Protocol	仅供教学，未列入施测内容 Taught, not tested	
主题 3：SCA 描述性评分表的专业术语 3 Topic: Terminology on the SCA Descriptive Form	6	2
主题 4：SCA 描述性评估 4 Topic: SCA Descriptive Assessment	活动 Activity	
主题 5：SCA 情感性评分表的专业术语 5 Topic: Terminology on the SCA Affective Form	4	2
主题 6：SCA 情感性评估 6 Topic: SCA Affective Assessment	活动 Activity	
2.05 章节 杯测标准以及相关表格 约 3% Section CUPPING PROTOCL AND FORMS IN USE About 3%		
主题 1：非 SCA 杯测评估表 1 Topic: Non-SCA Cupping Forms	仅供教学，未列入施测内容 Taught, not tested	
主题 2：杯测规范标准化的重要性 2 Topic: Importance of Standardized Cupping Protocols	4	1
2.06 章节 建立感官课程 约 15% Section SETTING UP A SENSORY PROGRAM About 15%		
主题 1：感官描述小组的定义以及目的 1 Topic: Definition and Purpose of a Sensory Descriptive Panel	4	1
主题 2：感官评估小组优于单一品鉴者之处 2 Topic: Advantages of a Sensory Panel Over a Single Taster	4	1
主题 3：设置杯测会 3 Topic: Staging a Tasting Session	4	1
主题 4：成功感官评估的场地要求 4 Topic: Venue Requirements for Successful Sensory Assessment	4	1
主题 5：感官评估的最佳实务 5 Topic: Sensory Assessment Best Practices	4	1
2.07 章节 建立感官评估小组 约 19% Section SETTING UP A SENSORY PANEL About 19%		
主题 1：小组以及测验选择 1 Topic: Panel and Test Selection	4	1
主题 2：感官评估小组提案 2 Topic: Sensory Panel Proposals	4	1
主题 3：小组成员遴选 3 Topic: Panelist Screening	5	1

主题 4：感官评估小组培训 4 Topic: Sensory Panel Training	4	1
主题 5：感官表现的测试与校正 5 Topic: Sensory Performance Testing and Calibration	4	1
主题 6：业务运用 6 Topic: Applications in Business	4	1
2.08 章节 进 / 出测试 约 5% Section In/Out Tests About 5%		
主题 1 进 / 出测试的定义与目的 1 Topic In/Out Test Definition and Purpose	4	1
主题 2：进 / 出测试的步骤 2 Topic: Steps of the In/Out Test	3	1
	活动 Activity	
	活动 Activity	
2.09 章节 分析测试 约 3% Section Analytical Tests About 3%		
主题 1：分析测试 1 Topic: Analytical Testing	4	1
总题数 Total Number of Questions	133	35

4. 课程内容与相关在线笔试考题 Course Curriculum with Corresponding Online Written Exam Questions

课程内容兹列如下，分为章节、主题与目标。

The course curriculum is outlined below and is divided into Sections, Topics, and Objectives.

所有在线笔试题目均为评测学员是否达成特定目标所拟定。这些题目一律按主题分类，并组成所谓的「题库」，学员受测内容为随机选自题库之中。由于测验采随机抽题方式，因此当某个主题的目标不只一个时，可能不会悉数列入学员受测内容。

All online written exam questions were developed as an assessment for a specific objective. These questions have been grouped according to topic. All questions within a topic are considered the topic “pool.” From this pool, a certain number of questions will be randomly selected and presented to the learner. If a particular topic has more than one objective, it is possible that the learner will not be tested on all objectives in the topic. This is due to the randomization of the questions from that topic.

2.01 | 章节 | 感官评估概述

3 个主题

| Section | SENSORY ASSESSMENT OVERVIEW

3 Topics

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
2.01.01 感官评估介绍 Introduction to Sensory Assessment	1. 定义感官评估 Define sensory assessment 2. 叙述以及形容感官评估的四个阶段 State and describe the four stages of sensory assessment	感官评估（评价）是一种科学方法，用于唤起、测量、分析及诠释对产品的反应，这些反应是通过人类的视觉、嗅觉、触觉、味觉和听觉等五种感官所感知。 Sensory assessment (evaluation) is a scientific method used to provoke, measure, analyze, and interpret responses to products as perceived through the five human senses of sight, smell, touch, taste, and hearing.	题目编号 100011696855 下列何者最能形容感官评估的过程？ <u>测量以及诠释人类对产品的反应</u> 辨别并列出具产品的化学成分 生成一种产品类别的定价策略 记录品鉴者的偏见 Question ID: 100011696855 Which of the following BEST describes the process of sensory assessment? <u>Measuring and interpreting human responses to products</u> Identifying and listing a product's chemical components Generating a pricing strategy for a category of products Documenting a taster's biases	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 20-22. Harry T. Lawless and Hildegarde Heymann, <i>Sensory Evaluation of Food - Principles and Practices, Second Edition</i> , (New York: Springer

		第 1 阶段：唤起 控制方法与环境等因素，在诱发感官刺激的过程中让偏见最小化。 Stage 1: Provoke Induce sensory stimuli in a controlled manner and environment, to minimize bias. 第 2 阶段：测量 收集数值数据，建立产品特征以及人类感知之间的关系。 Stage 2: Measure Collect numerical data, which establishes relationships between product characteristics and human perception. 第 3 阶段：分析 使用统计学分析数据，以判断产品特征之间的关系是否可能有效，非因未受控的变量所致。 Stage 3: Analyze The data is analyzed using statistics to determine if the relationships between product characteristics are likely valid and not due to uncontrolled variations.	题目编号 100011696856 在感官评估中，哪个阶段涉及以控制的方式诱发感官刺激？ <u>唤起</u> 测量 分析 同步 Question ID: 100011696856 Which stage of sensory assessment involves inducing sensory stimuli in a controlled manner? <u>Provoke</u> Measure Analyze Synthesize 题目编号 100011696857 在感官评估中，哪个阶段涉及应用统计学方法？ <u>分析</u> 唤起 诠释 测量 Question ID: 100011696857 Which stage of sensory assessment involves applying statistical methods? <u>Analyze</u> Provoke Interpret Measure	Science & Business Media, LLC., 2010), 2-3
--	--	--	--	--

		第 4 阶段：诠释 在假设、专业知识，以及对未来决策影响的背景下解释结果。 Stage 4: Interpret The results are interpreted in the context of hypotheses, professional knowledge, and implications for future decisions.	题目编号 100011696858 在感官评估中，哪个阶段涉及收集数值资料？ <u>测量</u> 唤起 诠释 分析 Question ID: 100011696858 Which stage of sensory assessment involves collecting numerical data? <u>Measure</u> Provoke Interpret Analyze	
			题目编号 100011696859 在感官评估的哪个阶段中，商业实体可根据测试结果从产品供应中剔除某产品？ <u>诠释</u> 唤起 测量 分析 Question ID: 100011696859 During which stage of sensory assessment could a business decide to eliminate a product from their offerings, based on test results? <u>Interpret</u> Provoke Measure Analyze	

2.01.02 三种感官测试法 Three Sensory Test Methods	1.定义并区别三种感官测试法 Identify and differentiate between the three sensory test methods 2.认识描述性评估被视为客观做法，情感性评估则具主观性质。 Recognize that descriptive assessments are considered objective, and affective assessments are considered subjective 3.认识生理学、心理学，以及文化因素可以影响人类在感官测试中的表现。 Recognize that physiological, psychological, and cultural factors can all influence how people perform in sensory tests	传统上，感官测试法被分为三种类别：差别（区别性）测试、情感性测试，以及描述性测试。 Traditionally, sensory test methods are grouped into three categories: difference (discriminative) tests, affective tests, and descriptive tests. 差别测试可以用于评估两个或多个产品是否明显不同，并且判断差异大小。三角杯测是在咖啡产业最为人知的感官差别测试。 Difference tests can be used to assess whether two or more products are perceptibly different, and to determine the magnitude of that difference. The triangulation test is the most widely known sensory difference test in the coffee industry. 情感性测试最常使用于消费者，藉此发掘某产品相较于其他产品的受欢迎或偏好的程度。这是一个主观的方法，除非一位专业人士试图与特定消费者族群或市场喜好一致。 Affective tests are used mostly when working with consumers, to discover how much a product is liked or preferred against other products.	题目编号 100011696860 下列何者并非三种感官测试法之一？ <u>适应性</u> 差别性 描述性 情感性 Question ID: 100011696860 Which of the following is NOT one of the three sensory test methods? <u>Adaptive</u> Difference Descriptive Affective 题目编号 100011696861 在下列感官测试法中，何者可用于评估两个或多个产品是否明显不同？ <u>差别性</u> 情感性 描述性 决定性 Question ID: 100011696861 Which of the following sensory test methods is used to assess whether two or more products are perceptibly different? <u>Difference</u> Affective Descriptive Conclusive	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 16-19, 70-91.
--	---	--	---	--

		This is a subjective approach, unless a professional seeks to align themselves with the preferences of a certain consumer group or market. 描述性测试使用于辨别、描述、和量化产品的特定感官特征。这是一个客观的方法，通常邀请受过培训与校正的描述性评审小组参加。 Descriptive tests are used to identify, describe, and quantify specific sensory characteristics of a product. This is an objective approach and involves the use of a trained and calibrated descriptive panel. 认识生理学、心理学，以及文化因素可以影响人类在感官测试中的表现。 Physiological, psychological, and cultural factors can all influence how people perform in sensory tests.	题目编号 100011696862 在下列感官测试法中，何者一般会被用于消费者测试？ <u>情感性</u> 描述性 差别性 适应性 Question ID: 100011696862 Which of the following sensory test methods is typically used for consumer testing? <u>Affective</u> Descriptive Difference Adaptive	
			题目编号 100011696863 在下列感官测试法中，何者使用受过培训与校正的评估小组？ <u>描述性</u> 情感性 差别性 决定性 Question ID: 100011696863 Which of the following sensory test methods uses a trained and calibrated panel? <u>Descriptive</u> Affective Difference Conclusive	

			题目编号 100011696864 下列叙述是否正确？情感性评估被视为客观做法。 正确 <u>错误</u> Question ID: 100011696864 Is the following statement true or false? Affective assessments are considered objective. True <u>False</u>	
			题目编号 100011696865 下列叙述是否正确？认识生理学、心理学，以及文化因素可以影响人类在感官测试中的表现。 <u>正确</u> 错误 Question ID: 100011696865 Is the following statement true or false? Physiological, psychological, and cultural factors can all influence how people perform in sensory tests. <u>True</u> False	

2.01.03 咖啡产业中的感官评估 Sensory Assessment in the Coffee Industry	1.说明为何感官评估对于有效评估咖啡有其必要 Explain why sensory assessment is necessary to effectively evaluate coffee 2.回顾咖啡专业人士使用风味评估做为决策工具的情形 Recall situations in which coffee professionals use flavor assessment as a decision-making tool 3.定义质量管理 Define quality control	感官评估对于有效评估咖啡有其必要性，因为目前很难或不可能透过仪器测量来预测咖啡的风味，实际品尝比了解咖啡的化学成分更能有效传达咖啡风味的概念。 Sensory assessment is necessary to effectively evaluate coffee because flavor is currently difficult or impossible to predict from instrumental measures. Tasting also conveys the concept of a coffee's flavor more effectively than knowledge about that coffee's chemical composition. 尽管感官分析无法满足所有商业决策，但咖啡专业人士仍会在各类情况下将风味评估作为决策工具，包括在特定农地种植咖啡的位置、种植哪些种类咖啡品种、应用哪种后	题目编号 100011696866 为何感官评估对于有效评估咖啡有其必要性？（请选择所有适用选项） <u>目前光凭仪器测量难以或不可能预测风味相较于了解咖啡的化学成分，品尝可更有效传达咖啡风味的概念。</u> 科学家无法判断一杯咖啡的化学成分 其他评估方法无法在一个受控的环境下进行 Question ID: 100011696866 Why is sensory assessment necessary to effectively evaluate coffee? (Select all that apply.) <u>Flavor is currently difficult or impossible to predict from instrumental measures.</u> <u>Tasting conveys the concept of a coffee's flavor more effectively than knowledge about that coffee's chemical composition.</u> Scientists cannot determine the chemical composition of a cup of coffee. Other methods of assessment cannot be conducted in a controlled environment.	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 16-19, 70-91. Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 20-22, 98-100. Britta Folmer, ed., <i>The Craft and Science of Coffee</i>, (San Diego: Elsevier Inc. as Academic Press, 2017), 419
--	---	--	---	---

		制处理方法、使用哪种烘焙曲线，以及使用哪种冲煮方法或萃取方案。 While sensory analysis cannot inform <i>all</i> business decisions, coffee professionals use flavor assessment as a decision-making tool in a variety of situations, including where to plant coffee on a particular farm, which variety of coffee plant to grow, which processing method to apply, which roast curve to use, and which brewing method or extraction protocol to use. 进行质量管理时会利用产品质量范围，判断感官特征可接受与不可接受的限度。 Quality control uses product quality ranges to determine acceptable and unacceptable limits of sensory characteristics.	题目编号 100011696867 下列何种情形下，咖啡专业人士将风味评估做为决策工具？ (请选择所有适用选项) 选择种植咖啡品种 挑选后制处理方法 决定如何烘焙咖啡 优化咖啡冲煮方法 Question ID: 100011696867 In which of the following situations do coffee professionals use flavor assessment as a decision-making tool? (Select all that apply.) Choosing a variety of coffee to grow Selecting a processing method Deciding how to roast a coffee Refining a brewing recipe Refining a brewing recipe 题目编号 100011696868 下列叙述是否正确？咖啡产业的所有决策应依据感官分析。 正确 错误 Question ID: 100011696868 Is the following statement true or false? All decisions in a coffee business should be based on sensory assessment. True False	
--	--	---	---	--

			题目编号 100011696869 下列哪个过程使用产品质量范围，来判断感官特征可接受与不可接受的限度？ <u>质量管理</u> 产品对照 瑕疵识别 产品配对 Question ID: 100011696869 Which of the following processes uses product quality ranges to determine acceptable and unacceptable limits of sensory characteristics? <u>Quality control</u> Product mapping Defect identification Product matching

7 个主题

2.02 | Section | PHYSIOLOGY AND SENSORY ATTRIBUTES

7 Topics

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
2.02.01 人类生理学以及感官 Human Physiology and the Senses	1.找出三个对于风味感知最有贡献的人类感官 Identify the three human senses that contribute most to the perception of flavor 2.指出负责嗅觉、味觉和触觉感知的人类感官器官 Name and locate the	嗅觉、味觉以及触觉（或「口感」）为感知风味的中心，故在咖啡感官评估中扮演着重要角色。 Smell, taste, and touch (or “mouth-sense”) are central to the perception of flavor and therefore play an important role in the sensory assessment of coffee.	题目编号 100011691665 风味融合了哪三种感官的体验？ <u>味觉 / 嗅觉 / 触觉</u> 嗅觉 / 味觉 / 视觉 味觉 / 触觉 / 视觉 味觉 / 嗅觉 / 听觉 Question ID: 100011691665 Flavor is a multi-modal experience integrating which three senses? <u>Taste/Smell/Touch</u> Smell/Taste/Sight Taste/Touch/Sight Taste/Smell/Sound	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 16-19, 70-91. Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty

	primary human sensory organs used in olfaction, gustation, and tactile sensation 3.区分鼻前嗅觉与鼻后嗅觉 Distinguish between orthonasal and retronasal olfaction	鼻腔内的嗅觉上皮用于嗅觉，软颚上的味蕾用于味觉，口腔肌肉上的触觉受体用于触觉感知。 The olfactory epithelium in the nasal cavity is used in olfaction. The taste buds on the soft palate are used in gustation. The tactile receptors on muscles in the mouth are used for tactile sensation.	题目编号 100011691666 哪一种嗅觉类型对于风味感知具有贡献？ <u>鼻后嗅觉</u> 鼻前嗅觉 触觉 味觉 Question ID: 100011691666 Which type of olfaction contributes to the perception of flavor? <u>Retronasal</u> Orthonasal Tactile Gustatory	Coffee Association, September 2021), 23-24, 38-55.
--	---	---	---	---

		「鼻前嗅觉」的通路是透过鼻子，当我们吸气时，从环境中嗅到气味。「鼻后嗅觉」的通路则是透过口腔后段，当我们呼气时，感知风味中嗅觉成分的方式。 The “orthonasal” pathway is through the nose, is utilized when we breathe in, and allows us to pick up odors from our environment. The “retronasal” pathway is from the back of the mouth cavity, as we breathe out, and is how we pick up the olfactory component of flavor. 风味是一种融合多感官的体验，包括风味的嗅觉成分，以及口感的感觉，如温度和辛辣感。风味的感知有很大一部分来自嗅觉。 Flavor is a multi-modal experience encompassing taste, plus the olfactory component of flavor perceived retronasally, and	题目编号 100011691667 将各项感官与其对应的感知器官进行配对（每个选项仅能使用一次） 1.嗅觉 2.味觉 3.触觉 A = 嗅觉上皮 B = 味蕾 C = 触觉受体 1=A / 2=B / 3=C Question ID: 100011691667 Match each sense with its corresponding sensory organ. Each choice will be used only once. 1. Smell 2. Taste 3. Touch A = Olfactory Epithelium B = Taste Buds C = Tactile Receptors <u>1=A / 2=B / 3=C</u>	
--	--	--	---	--

		the mouth-sense sensations such as temperature and spiciness. A large part of flavor perception comes from the sense of smell.	题目编号 100011691668 下列何者最适合填入以下句子？_____ 通路是透过鼻子，而_____ 通路则是透过口腔后段。 <u>鼻前嗅觉、鼻后嗅觉</u> 鼻后嗅觉、鼻前嗅觉 温度、鼻后嗅觉 口感、鼻前嗅觉 Question ID: 100011691668 Which of the following terms BEST complete this statement? The _____ pathway is through the nose, while the _____ pathway is through the back of the mouth cavity. <u>Orthonasal, retronasal</u> Retronasal, orthonasal Temperature, retronasal Mouth-sense, orthonasal	
2.02.02 神经学、心理学，以及感官感知 Neurology, Psychology, and Sensory Perception	1.认识嗅觉与记忆之间的链接 Recognize the link between the sense of smell and memory 2.认识能够影响感官测试的心理学因素 Recognize the psychological factors that can impact sensory tests	我们的嗅觉输入与大脑的杏仁核系统相连接，每一种刺激都代表一个「气味对象」，并具有直接存取记忆的功能。换言之，在大脑中气味呈现与气味记忆存在着紧密的链接（因此，我们反复接触到某种气味时，对于该气味的识别能力会提高）。 The input from our sense of smell connects to the limbic system, where each stimulus is	题目编号 100011691673 何种感知的功能与嗅觉最紧密一致？ <u>记忆</u> 判断力 语言 想象力 Question ID: 100011691673 Which cognitive function is MOST closely aligned with the sense of smell? <u>Memory</u> Judgement Language Imagination	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 23-27, 40.

	3.定义跨感官互动 Define crossmodal interaction 4.认识能够影响感知的外在因素 Recognize that extrinsic factors can impact perception	represented as an “odor object” with direct access to memory. In other words, there is a close link in the brain between odor representation and odor memory (therefore, our ability to recognize an odor improves as we are repeatedly exposed to that odor). 心理学因素如感官感知、偏见、个性、态度、动机以及文化背景等，都可以影响各种感知测试。 Psychological factors like sensory perception, bias, personality, attitude, motivation, and cultural background can impact all types of sensory tests. 跨感官互动为一种感官影响其他感官的感知。这种现象也许可以解释 (1)我们对咖啡甜味的感知 (请参阅2.02.03)，与 (2)外在因素对我们质量感知的影响。 Crossmodal interaction is the influence of one sense on the perception of other senses. This phenomenon may explain 1.) our perception of sweetness in coffee	题目编号 100011691674 下列何者最适合填入以下句子？跨感官互动是 _____。 <u>一种感官影响其它感官的感知</u> 气味呈现与气味记忆在大脑中的链接 文化背景与经验在风味感知上的影响 一种感官测试的类型 Question ID: 100011691674 Which of the following BEST completes this sentence? Crossmodal interaction is _____. <u>the influence of one sense on the perception of other senses</u> the link in the brain between odor representation and odor memory the influence that cultural background and experiences have on flavor perception a type of sensory test 题目编号 100011691675 下列何种心理学因素会影响感官测试？（请选择所有适用选项） <u>偏见</u> <u>个性</u> <u>动机</u> <u>文化背景</u> Question ID: 100011691675 Which of the following psychological factors can impact sensory tests? (Select all that apply.) <u>Bias</u> <u>Personality</u> <u>Motivation</u> <u>Cultural background</u>	
--	--	--	---	--

		(see 2.02.03), and 2.) the influence of extrinsic factors on our perceptions of quality. 外在属性 – 关于产品的信息，如产地、认证、农场名称或品牌 – 会影响感知、期待以及偏好。 Extrinsic attributes – information about a product like origin, certification, name of farm or brand – can impact perception, expectations, and preferences.	题目编号 100011691676 下列叙述是否正确？关于产品的信息，例如产地、认证、农场名称或品牌，会影响我们对该产品质量的感知。 <u>正确</u> 错误 Question ID: 100011691676 Is the following statement true or false? Information about a product like origin, certification, or brand can impact our perception of that product's quality. <u>True</u> False	
2.02.03 基本味道 Basic Tastes	1.列出五种基本味道 List the five basic tastes 2.识别两种对咖啡风味影响最大的基本味道 Identify the two basic tastes that have the greatest impact on a coffee's flavor 3.讨论跨感官感知如何有助于我们感受咖啡中的甜味。 Discuss how crossmodal perception	五种基本味道为：酸（酸质）、苦、甜、咸与鲜。 There are five basic tastes: sour (acidic), bitter, sweet, salty and umami. 酸与苦是咖啡里面最强烈的基本味道。 Sourness and bitterness are the most intense basic tastes in coffee. 我们之所以能够感受到咖啡中的甜味，最接近的理论应为跨感官感知。例如，我们察觉到	题目编号 100011691681 在下列关于咖啡的叙述语中，何者为基本味道？（请选择所有适用选项） <u>甜</u> <u>咸</u> <u>苦</u> 果味 Question ID: 100011691681 Which of the following coffee descriptors are basic tastes? (Select all that apply.) <u>Sweet</u> <u>Salty</u> <u>Bitter</u> Fruity	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 20-22. Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association,

	may be contributing to our perception of sweetness in coffee	会令人想起甜食的芳香物质，因此感知到甜味。 The most likely theory to explain sweetness our perception of sweetness in coffee is crossmodal perception (we detect aromatics that remind us of sweet foods, and therefore perceive a sweet taste). 我们也可在咖啡中感知到较小程度的咸味与鲜味。 To a lesser degree, saltiness and umami can also be perceived in coffee.	题目编号 100011691682 哪两种基本味道对咖啡的风味影响最大？ <u>苦</u> <u>酸</u> 甜 咸 Question ID: 100011691682 Which two basic tastes have the greatest impact on a coffee's flavor? <u>Bitter</u> <u>Sour</u> Sweet Salty	September 2021), 46-51. World Coffee Research, <i>Sensory Lexicon Unabridged Definition and References, Second Edition</i>. (PDF, Portland: World Coffee Research, 2017), s.v. "Taste Basics" World Coffee Research, <i>Sensory Lexicon Unabridged Definition and References, Second</i>
--	---	---	--	---

		题目编号 100011691683 杯测师在评估咖啡的湿香时嗅到焦糖风味，即使该咖啡中并未含有太多碳水化合物仍感觉到强烈的甜味。以下哪个名词最能解释这种现象？ <u>跨感官感知</u> 边际产品价值 整体差别测试 描述性评估 Question ID: 100011691683 A cupper detects a caramel note when evaluating a coffee's aroma and then detects an intense sweetness, even though the coffee beverage does not contain many carbohydrates. Which of the following terms BEST explains this phenomenon? <u>Crossmodal perception</u> Marginal p-value Overall difference test Descriptive assessment	<i>Edition. (PDF, Portland: World Coffee Research, 2017), s.v. "Taste Basics"</i>
		题目编号 100011691684 下列叙述是否正确？我们之所以在咖啡中感知到甜味，是因为成品中含有大量的碳水化合物。 正确 <u>错误</u> Question ID: 100011691684 Is the following statement true or false? We detect sweetness in coffee because there are high quantities of carbohydrates in the finished brew. True <u>False</u>	

	2.认识基本味道中的差异 Recognize the difference in basic tastes 3.区别以及评比酸值与苦味之间的程度 Discriminate between and rank levels of acidity and bitterness	在本活动中，学员将练习在酸与甜的溶液中分级强度。 In this activity, learners will practice ranking the levels of intensity in sour and sweet solutions.	活动 2.02.04 详见附录 B 指示：活动准备指南 列入实作测验 Activity 2.02.04 See instructions in Appendix B: Activity Preparation Guide Tested on Practical Exam	
2.02.04 风味感知中的味道与香气 Taste and Aroma in Flavor Perception	1.按照风味感知描述味道与香气之间的关系 Describe the relationship between taste and aroma in terms of flavor perception	我们藉由味蕾获取有关咖啡的讯息（主要是酸味和苦味，也有咸味），而这些讯息和鼻后嗅觉相结合，创造了风味感知。 Information about the coffee's taste from our taste buds (mostly its sourness and bitterness, but also its saltiness) is combined with the retronasal smell perception to create the sensation of flavor.	题目编号 100011696871 下列何者最适合定义风味？ <u>一种结合基本味道与鼻后嗅觉感知的体验</u> 咖啡的触感，包括重量感以及质地 一种结合基本味道与鼻前嗅觉感知的体验 干燥咖啡粉的味道 Question ID: 100011696871 Which of the following statements best defines flavor? <u>An experience combining basic tastes and retronasal smell perception</u> The tactile feel of the brew, comprising its heaviness and texture An experience combining basic tastes and orthonasal smell perception The smell of the dry grounds	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 42, 48.

		当我们无法以嗅觉组成部分感知一项产品时（当我们鼻子不通或感冒时），我们察觉风味的能力将大幅地削弱。 When we cannot perceive the olfactory components of a product (when we block our nose, or when we have a cold), our ability to detect flavor is greatly diminished. 我们的味蕾能察觉基本味道（如酸味），而当这些感知与鼻后嗅觉结合时，我们才能感知到风味（例如柠檬或柳橙）。 Our taste buds detect basic tastes (like sourness), and only when those sensations are combined with retronasal olfaction do we perceive a flavor (like lemon or orange).	题目编号 100011696872 当我们无法以嗅觉组成部分感受某产品时，会发生何种情况？ <u>我们察觉风味的能力会大幅削弱</u> 我们对基本味道的感知会加强 我们察觉风味的能力将维持不变 我们对基本味道的口感会加强 Question ID: 100011696872 What happens when we cannot perceive the olfactory components of a product? <u>Our ability to detect flavor is greatly diminished.</u> Our perception of the basic tastes is enhanced. Our ability to detect flavor remains the same. Our perception of mouthfeel is enhanced.	
			题目编号 100011696873 下列何者最适合填入以下句子？当我们在咖啡中品尝到一种香草风味时，我们正在体验_____。 <u>基本味道与鼻后嗅觉的结合</u> 基本味道与口感的结合 口感与鼻后嗅觉的结合 酸的味道 Question ID: 100011696873 Which of the following BEST completes this sentence? When we taste a vanilla flavor note in coffee, we are experiencing _____. <u>a basic taste combined with retronasal olfaction</u> a basic taste combined with mouthfeel mouthfeel combined with retronasal olfaction an acidic taste	

			题目编号 100011696874 下列何者最适合填入以下句子？咸味焦糖的感知是属于 _____ 的范例。 味道与香气 仅是一种味道 仅是一种香气 一种触觉 Question ID: 100011696874 Which of the following BEST completes this sentence? The sensation of salty caramel is an example of _____. a taste and an aroma a taste only an aroma only a tactile sensation	
	1.认识并分类咖啡中的主要香气 Recognize and categorize key aromas in coffee 2.说明干香辨识参考的实际应用 Illustrate practical use of fragrance identification references	在本活动中，学员将接触到通常在咖啡中闻到的香气。 In this activity, learners will be exposed to common aromas found in coffee. 学员将练习使用干香辨别参考。 Learners will practice using fragrance identification references.	活动 2.02.04 详见附录 B 指示：活动准备指南 列入实作测验 Activity 2.02.04 See instructions in Appendix B: Activity Preparation Guide Tested on Practical Exam	World Coffee Research, <i>Sensory Lexicon Unabridged Definition and References, Second Edition</i>. (PDF, Portland: World Coffee Research, 2017).

2.02.05 常见口感感知 Common Mouthfeel Sensations	1. 举出五种由 SCA 咖啡价值评估规范所定义的常见口感 State five common mouthfeel sensations as defined by the SCA Coffee Value Assessment Protocol	在咖啡中有五种常见的口感（触觉）感知： • 粗糙（颗粒感、粉状、沙粒状） • 油滑 • 滑顺（丝绒、丝滑、糖浆） • 口腔干涩（涩味） • 金属 There are five common mouthfeel (tactile) sensations in coffee: • rough (gritty, chalky, sandy) • oily • smooth (velvety, silky, syrupy) • mouth-drying (astringent) • metallic 相关定义可参阅咖啡价值评估规范。提醒学员 WCR 咖啡感官辞典包含四种相似的叙述词：油滑、厚实、口腔干涩与金属。 Definitions can be found in the Coffee Value Assessment Protocol. Remind learners that the WCR Coffee Sensory Lexicon contains four similar descriptors: oily, thickness, mouth-drying, and metallic.	题目编号 100011691689 下列何者最能描述「口腔干涩」或「涩味」的口感？ <u>由单宁与唾液中的蛋白质结合所引起的干燥、收敛感</u> 由酸性咖啡所引起的一种尖锐感知 由咖啡中的生物碱所引起的苦味 由咖啡中胶体物质引起在舌头与上颚间的厚重感 Question ID: 100011691689 Which of the following BEST describes the mouthfeel sensation of ‘mouth-drying’ or ‘astringency’? <u>The dry, puckering sensation caused by tannins binding to proteins in the saliva</u> A sharp sensation caused by an acidic coffee A bitter taste caused by alkaloids in coffee A thick sensation between the tongue and hard palate caused by colloids in coffee 题目编号 100011691690 下列何者并非口感的叙述词？ <u>苹果</u> 涩味 金属感 糖浆般 Question ID: 100011691690 Which of the following terms is NOT a descriptor of mouthfeel? <u>Apple</u> Astringent Metallic Syrupy	<i>A New System to Assess Coffee Value: Introducing the Beta Version of the Specialty Coffee Association’s Coffee Value Assessment (April 2023),</i> (PDF, London: SCA, 2023), 24. Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 20-22. Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 52-55. World Coffee Research, <i>Sensory Lexicon Unabridged Definition and References, Second Edition.</i> (PDF, Portland:
--	---	---	---	--

		题目编号 100011691691 下列何者为根据 WCR 咖啡感官辞典定义的常见口感感知？(请选择所有适用选项) <u>口腔干涩</u> <u>油滑感</u> <u>厚实</u> <u>金属感</u> Question ID: 100011691691 Which of the following are common mouthfeel sensations as defined by the WCR Coffee Sensory Lexicon? (Select all that apply.) <u>Mouth-Drying</u> <u>Oily</u> <u>Thickness</u> <u>Metallic</u>	World Coffee Research, 2017), s.v. "Mouthfeel" World Coffee Research, <i>Sensory Lexicon Unabridged Definition and References, Second Edition</i> . (PDF, Portland: World Coffee Research, 2017), s.v. "Mouthfeel"
		题目编号 100011691692 下列叙述是否正确？咖啡会呈现出具有金属的口感。 <u>正确</u> 错误 Question ID: 100011691692 Is the following statement true or false? A coffee can exhibit a metallic mouthfeel. <u>True</u> False	

	2.区分在 WCR 咖啡感官辞典参考中所找到的口感 Distinguish between mouthfeel sensations found in references from the WCR Sensory Lexicon	在本活动中，学员将使用 WCR 咖啡感官辞典中所列之参考，探索咖啡中与口感有关的常见感知。 In this activity, learners will explore the common sensations associated with mouthfeel in coffee by using the references listed in the WCR Sensory Lexicon.	活动 2.02.05 详见附录 B 指示：活动准备指南 列入实作测验 Activity 2.02.05 See instructions in Appendix B: Activity Preparation Guide Tested on Practical Exam	
2.02.06 风味的价值链影响 Impact of Value Chain on Flavor	1.认识咖啡价值链的所有环节都可能影响咖啡风味 Recognize that all steps of the coffee value chain can impact coffee flavor 2.以基本词汇陈述哪些因素有助于生成咖啡中的特定风味 State in general terms what factors help	生豆包含风味前身。在咖啡价值链中的所有步骤都足以影响最终产品风味。 Green coffee contains flavor precursors. All steps in the coffee value chain can impact the flavor of the final product. 烘焙是由各式各样影响香气与味道曲线的化学反应所组成。 苦味会随烘焙程度增加。 Roasting consists of a variety of chemical reactions that impact aroma and taste properties.	题目编号 100011691697 下列哪两种原因可以解释咖啡为何过苦？ <u>咖啡烘焙过度</u> <u>咖啡萃取过度</u> 咖啡以全日照种植 咖啡熟豆储存在冰箱内 Question ID: 100011691697 Which two of the following reasons could explain why a coffee tastes excessively bitter? <u>The coffee was roasted excessively.</u> <u>The coffee was over-extracted.</u> The coffee was grown in full sun. The roasted coffee was stored in the freezer.	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 50. Britta Folmer, ed., <i>The Craft and Science of Coffee</i>, (San Diego: Elsevier Inc. as Academic Press, 2017), s.v. “12.3 Flavor Compounds Generated

	generate certain flavors in coffee	Bitterness increases with the roast level. 冲泡不会产生任何新的挥发性化合物，仅单纯萃取咖啡熟豆中的一部分，而过度萃取则可能会造成咖啡苦味增加。 Brewing does not produce any new volatiles, but simply extracts a percentage of what is in a roasted bean. An over-extracted brew can result in increased bitterness.	题目编号 100011691698 下列哪两种因素不会影响咖啡的风味？ <u>价格</u> <u>咖啡豆尺寸</u> 后制处理方法 储藏方式 Question ID: 100011691698 Which two of the following factors do NOT affect a coffee's flavor? <u>Price</u> <u>Bean size</u> Processing method Storage 题目编号 100011691699 下列叙述是否正确？咖啡从产地运送到消费国的条件不会对咖啡风味产生影响。 正确 <u>错误</u> Question ID: 100011691699 Is the following statement true or false? The conditions under which coffee ships from origin to consuming country do NOT have the potential to impact coffee flavor. True <u>False</u>	Upon Roasting,” “12.2 Flavor Precursors Occurring in Green Coffee Beans,” “15.The Brew—Extracting for Excellence”
--	------------------------------------	--	---	--

			题目编号 100011691700 下列叙述是否正确？冲泡咖啡会产生新的挥发性化合物。 正确 错误 Question ID: 100011691700 Is the following statement true or false? Brewing coffee produces new volatile compounds. True False	
2.02.07 评估咖啡中的感官差异 Evaluating Sensory Differences in Coffee	1.使用「选择所有适用选项」(CATA)来辨别描述词 Utilize check all that apply (CATA) tools to identify descriptors 2.归纳并描述咖啡中的关键气味、风味与口感等特征 Characterize and describe key aromas, flavors, and mouthfeel characteristics present in brewed coffees 3.找出风味及口感与产地及加工的关联 Relate flavors and textures to origin and process	在本活动中，学员将练习使用 SCA 描述性评分表，在六杯不同的咖啡之间实践识别风味、香气和口感的结合。 In this activity, learners will practice combining the recognition of flavor, aroma, and mouthfeel together in six different brewed coffees using the SCA Descriptive Form.	活动 2.02.07 详见附录 B 指示：活动准备指南 列入实作测验 Activity 2.02.07 See instructions in Appendix B: Activity Preparation Guide Tested on Practical Exam	World Coffee Research, <i>Sensory Lexicon Unabridged Definition and References, Second Edition</i>. (PDF, Portland: World Coffee Research, 2017).

2.03 | 章节 | 差别测试与三角杯测

5 个主题

| Section | DIFFERENCE TESTING AND TRIANGULATIONS 5 Topics

主题 Topics	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
2.03.01 差别测试以及三角杯测概述 Overview of Difference Testing and Triangulations	1. 定义差别测试的两个常见用途 Define the two general purposes of difference testing 2. 识别与区别两种常见类型的差别测试 Identify and distinguish between two general types of difference tests	差别（或区别性）测试用于判断两种产品间的差异或相同点，或用于测试品鉴者识别这些差异的能力。 Difference (or discriminative) tests are used to determine the difference or similarity between two products or test a taster's ability to do so. 较重大或明显的差异将被较多的品鉴者正确识别，而仅有较少的品鉴者能够成功辨别细微	题目编号 100011691705 下列哪 两者 最能描述差别测试的目的？ <u>判断两种产品间的差异</u> <u>测试品鉴者区别样本的能力</u> 判断一杯咖啡的风味轮廓 测试一杯咖啡受消费者喜爱的程度 Question ID: 100011691705 Which two statements BEST describe the purposes of difference testing? <u>To determine the differences between two products</u> <u>To test a taster's ability to discriminate between samples</u> To determine a coffee's flavor profile To test how much a coffee is liked by consumers	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 20-22. Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association,

	3.描述一项三角 (三角形) 杯测 Describe a triangulation (triangle) test	的差异。 More significant or noticeable differences will be correctly identified by more tasters, whereas fewer tasters will be able to correctly identify subtle differences. 差别测试有两种常见类型：总体差别测试（品鉴者判断样本间是否存在感官差异），以及属性差别测试（品鉴者在样本间发现单一属性的差异）。 There are two general types of difference tests: overall difference tests (in which the taster determines whether a sensory difference exists between samples) and attribute difference tests (in which the taster finds differences in a single attribute between samples). 三角杯测是一种区别化的测试方法，由品鉴者在三个一组的样本中识别出与其它两个不同	题目编号 100011691706 何种差别测试会由品鉴者在样本间发现单一属性的差异？ <u>属性差别测试</u> 整体差别测试 描述性测试 偏好测试 Question ID: 100011691706 Which type of difference test involves a taster finding differences in a single attribute between samples? <u>Attribute difference test</u> Overall difference test Descriptive test Preference test 题目编号 100011691707 三角杯测是属于哪一种感官测试的范例？ <u>差别测试</u> 描述性测试 喜好度测试 偏好测试 Question ID: 100011691707 A triangulation test is an example of what kind of sensory test? <u>Difference test</u> Descriptive test Hedonic test Preference test	September 2021), 72-81. Roland P. Carpenter, David H. Lyon, and Terry A. Hadsell, <i>Guidelines for Sensory Analysis in Food Product Development and Quality Control – Second Edition</i> (Gaithersburg: Aspen Publishers, Inc. 2000), 43.
--	--	---	--	--

		/ 最明显不同者。 A triangulation (or triangle) test is a discriminative test method in which the taster identifies the odd/most significantly different sample in a set of three samples.	题目编号 100011691708 哪种差异测试会由品鉴者判断样本之间是否存在感官差异？？ <u>整体差别测试</u> 属性差别测试 喜好度测试 偏好测试 Question ID: 100011691708 Which type of difference test involves a taster determining whether a sensory difference exists between samples? <u>Overall difference test</u> Attribute difference test Hedonic test Preference test	
2.03.02 三角杯测的常见应用 Common Applications for Triangulation Testing	1. 辨别在咖啡中三角杯测的实际应用 Identify practical applications for triangulation testing in coffee	三角杯测在咖啡产业被广泛应用于： Triangulation testing is used widely in the coffee industry for: 检测是否由于烘焙或是配方改变而存在可感知的差异 Detecting if perceivable differences exist due to changes in roasting or blending	题目编号 100011691713 下列叙述是否正确？三角杯测可用于测试一款新的配方是否与旧配方在风味上有所差异。 <u>正确</u> 错误 Question ID: 100011691713 Is the following statement true or false? A triangulation test can be used to test whether a new blend profile is perceptibly different than an old blending profile. <u>True</u> False	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 20-22. Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i>

		- 产品重新配方、配对与比较 Product reformulation, matching, and comparison - 评估品鉴者的感官区别技能 Assessing a taster's sensory discriminating skills	题目编号 100011691714 下列哪三种场景最适合使用三角杯测？ <u>决定新配方与旧配方之间是否存在可感知的差异</u> <u>将新产品的感官特性与消费者的喜好风味相匹配</u> <u>测试与校正感官评估小组成员</u> 建立消费者偏好的浓缩咖啡配方 Question ID: 100011691714 In which three of the following scenarios would it be MOST appropriate to use a triangulation test? <u>Deciding if there is a perceivable difference between a reformulated blend and the original recipe</u> <u>Matching a new product's sensory profile to a customer's desired profile</u> <u>Testing and calibrating a sensory panelist</u> Establishing which new espresso recipe customers prefer	(London: Specialty Coffee Association, September 2021), 72-81.
			题目编号 100011691715 下列叙述是否正确？三角杯测通常用于测试消费者的偏好。 正确 <u>错误</u> Question ID: 100011691715 Is the following statement true or false? Triangulation testing is often used to test consumer preference. True <u>False</u>	

			题目编号 100011691716 烘豆业者想要知道：新的烘焙曲线是否在感知上与旧烘焙曲线有所差异，应该使用哪种感官测试方法？ 三角杯测 偏好配对 偏好评比 进 / 出 Question ID: 100011691716 A roasting company wants to know if a new roasting profile is perceptibly different than an old roasting profile. Which sensory test should the company use? Triangulation Paired preference Ranked preference In/out	
--	--	--	--	--

2.03.03 三角杯测标准规范 Triangulation Testing Protocols	1.描述三角杯测的要求与标准规范 Describe the requirements and protocol for triangulation testing	国际标准化组织 (ISO) 将每一个一组的样本称为「三合一」。 The ISO refers to each set of three samples as a “triad.” 向学员介绍基本问题：三种样本之中，何者为不同的样本？ <i>Introduce learners to the basic question: Out of the three, which is the odd sample?</i> 六 (6) 个可能的排列组合应随机安排。例如 A 与 B，六种可能的排列组合为：AAB、ABA、BAA、BBA、BAB 以及 ABB。指示学员辨别出不同的样本并记录答案。 <i>The six (6) possible order combinations should be randomized. For samples A and B, the six possible order combinations are: AAB, ABA, BAA, BBA, BAB, and ABB. The learner is instructed to identify the odd sample and record the answer.</i> 样本编码为三位数随机编号，以减少惯性评分与预期错误。 Coding samples with a three-digit random number helps	题目编号 100011691721 在感官测试中，将样本进行编码（例如，使用三位数的随机数字）有助于减少哪两种错误？ <u>习惯化 / 惯性评分</u> <u>预期错误</u> 适应 / 残留效应 偏好 Question ID: 100011691721 Coding samples (e.g., with a three-digit random number) helps reduce which two errors in sensory tests? <u>Habituation/habitual scoring</u> <u>Expectation errors</u> Adaptation/carry-over effects Preference 题目编号 100011691722 在三角杯测中如何尽可能降低残留效应？ <u>提供参加者所有可能的品鉴顺序序列</u> 纳入熟练的品鉴者 邀请超过 40 名参加者 一大早进行测试 Question ID: 100011691722 How does one minimize the carry-over effect in a triangulation test? <u>By serving all possible serving order sequences to participants</u> By including skilled tasters By inviting more than 40 participants By conducting the tasting early in the morning	International Organization for Standardization. <i>ISO 4120:2004 Sensory analysis — Methodology - Triangle test</i>. Geneva, ISO, 2004 International Organization for Standardization. <i>ISO 4120:2004 Sensory analysis — Methodology - Triangle test</i>. Geneva, ISO, 2004 Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 20-22. Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 72-81.
--	--	---	--	---

		reduce habitual scoring and expectation errors. 为了得到具有公信力的测试结果，至少有 18 名杯测员进行差别测试，以及 36 名杯测员进行相似度测试。 To have a test that is robust enough to generate significant results, one would want to have at least 18 testers for difference testing and 36 tasters for similarity testing. 三角杯测的样本可以使用任何萃取方法。 A triangulation test can be conducted using any extraction method.	题目编号 100011691723 设立一个三角杯测需要准备几种不同的咖啡样本？ 1 <u>2</u> 3 4 Question ID: 100011691723 How many different coffee samples are needed to set up a triangulation test? 1 <u>2</u> 3 4 题目编号 100011691724 下列叙述是否正确？三角杯测的测试样本应采用杯测法萃取。 正确 <u>错误</u> Question ID: 100011691724 Is the following statement true or false? Triangulation testing samples must be brewed using the cupping method. True <u>False</u>	
--	--	---	---	--

	2.三角杯测的准备与进行 Prepare and perform a triangulation test.	在本活动，学员将练习如何安排与进行三角杯测。 In this activity, learners practice arranging and conducting a triangulation test.	活动 2.03.03 详见附录 B 指示：活动准备指南 列入实作测验 Activity 2.03.03 See instructions in Appendix B: Activity Preparation Guide Tested on Practical Exam	
2.03.04 三角杯测统计 Triangulation Test Statistics	1.依照假设检验的方式，描述通常用于分析三角杯测结果的统计方法 Describe the statistical method commonly used to analyze the results of a triangulation test in terms of hypothesis testing	进行三角杯测时，品鉴者有 33% 的可能性选择正确答案。 When conducting a triangulation, there is a 33% probability that the taster chooses the correct answer by chance. 在统计学中进行假设检验时，p 值有助于判断结果的显著性。于一个母体提出主张后，可利用假设检验测试其有效性，而尚未成立的主张在本质上被称为虚无假设。	题目编号 100011691729 下列叙述是否正确？在三角杯测中，一个 p 值有助于判断结果的重要性。 <u>正确</u> 错误 Question ID: 100011691729 Is the following statement true or false? A p-value helps determine the significance of the results in triangulation testing. <u>True</u> False	Alejandra M. Muñoz, Gail Vance Civile, and B. Thomas Carr, <i>Sensory Evaluation In Quality Control</i> (New York: Springer Science+Business Media 1992), 206

		When one performs a hypothesis test in statistics, a p-value helps determine the significance of the results. Hypothesis tests are used to test the validity of a claim that is made about a population. This claim that's on trial, in essence, is called the null hypothesis. 在三角杯测中，虚无假设是指在样本之间没有可区别的差异。 In a triangle test, the null hypothesis is that there is no distinguishable difference between the samples.	题目编号 100011691730 某品管经理假设在样本之间没有可区别的差异，而该经理在三角杯测中选择了通过 / 不通过的 p 值（alpha 值）为 0.01 而非 0.05。下列哪两个叙述正确？ <u>接受该假设具有较高的风险</u> <u>选择 0.01 有较多有效的 / 统计上显著的结果</u> 拒绝该假设具有较高的风险 该测试需要一个额外的样本才有效 Question ID: 100011691730 A quality control manager has a hypothesis that there is no distinguishable difference between two samples. The manager has chosen a pass/fail p-value (alpha value) of 0.01 instead of 0.05 in a triangulation test. Which two of the following statements are true? <u>There is a higher risk to accept the hypothesis.</u> <u>There are more valid/statistically significant results with 0.01.</u> There is a higher risk to reject the hypothesis. The test requires an additional sample to be valid.	
--	--	--	---	--

		小的 p 值 (通常 ≤ 0.05) 表示有强而有力的证据反对虚无假设 , 故虚无假设被拒绝。 In a triangle test, the null hypothesis is that there is no distinguishable difference between the samples. A small p-value (typically ≤ 0.05) indicates strong evidence against the null hypothesis, so the null hypothesis is rejected. 大的 p 值 (> 0.05) 表示对虚无假设的证据较为薄弱 , 故测试者拒绝虚无假设失败。	题目编号 100011691731 于三角杯测中品尝咖啡时 , 有机会选择到正确答案的机率为 ? 25% 33% 50% 75% Question ID: 100011691731 When tasting the coffees in a triangulation test, what is the probability of choosing a correct answer by chance? 25% 33% 50% 75%	
--	--	--	--	--

		A large p-value (> 0.05) indicates weak evidence against the null hypothesis, so the tester fails to reject the null hypothesis. 非常接近临界点 (0.05) 的 p 值会被视为处于统计学意义的边缘 (可能有不同结果) , 应始终提供 p 值报告 , 供读者自行得出结论。 p-values very close to the cutoff (0.05) are considered to be marginal (could go either way). Always report the p-value so that readers can draw their own conclusions. 从统计的角度来看 , 三角杯测要比二选一测试法更为有效。 A triangulation test is statistically more efficient than a duo-trio test. Alpha-risk (α-risk) 是发生第一类错误的机率 , 即当实际上不存在可觉察的差异时 , 却得出存在差异的结论 , 亦称为伪阳性。 Alpha-risk (α-risk) is the probability of making a Type I error, which is concluding that a perceptible difference exists when one does not. This is also known as a false positive.	题目编号 100011691732 下列叙述是否正确？从统计的角度来看 , 三角杯测要比二选一的测试法更为有效。 <u>正确</u> 错误 Question ID: 100011691732 Is the following statement true or false? A triangulation test is statistically more efficient than a duo-trio test. <u>True</u> False	
--	--	--	--	--

		Beta-risk (β-risk) 是发生第二类错误的机率，即当实际上存在可觉察的差异时，却得出不存在差异的结论。beta-risk (β-risk) is the probability of making Type II error, which is concluding that no perceptible difference exists when one does.		
	3.将统计学方法应用到三角杯测的测试结果 Apply a statistical method in the analysis of triangulation test results	在本活动中，学员将练习在先前完成的三角杯测应用统计学分析。 In this activity, learners practice applying statistical analysis to the triangulation test they completed earlier.	活动 2.03.04 详见附录 B 指示：活动准备指南 列入实作测验 Activity 2.03.04 See instructions in Appendix B: Activity Preparation Guide Tested on Practical Exam	International Organization for Standardization.<i>ISO 4120:2004 Sensory analysis — Methodology - Triangle test.</i>Geneva, ISO, 2004

2.03.05 差别测试的其它替代方案 Alternative Methods for Difference Testing	1. 认识替代的差别测试方法 (二选一、进 / 出 , 以及对照比较) Recognize alternative difference test methods (duo-trio, in/out, and difference from control)	其他差别测试包含二选一测试、进 / 出 , 以及对照比较测试。 Other difference tests include duo-trio tests, in/out tests, and difference from control tests. <i>复习附录A 中这些测试的定义。提供这些测试在感官科学中实际应用的实作范例。</i> <i>Review the definitions of these tests in Appendix A. Provide practical examples of how these tests are used in sensory science.</i>	题目编号 100011691737 在下列测试方法中，何者可用于差别测试？（请选择所有适用选项） <u>三角杯测</u> <u>二选一测试</u> <u>进 / 出测试</u> 感官风味测试 Question ID: 100011691737 Which of these test methods can be used for difference testing? (Select all that apply.) <u>Triangulation test</u> <u>Duo-trio test</u> <u>In/out test</u> Sensory profiling test 题目编号 100011691738 于二选一测试中品尝咖啡时，有机会选择到正确答案的机率为？ 25% 33% <u>50%</u> 75% Question ID: 100011691738 When tasting the coffees in a duo-trio test, what is the probability of choosing a correct answer by chance? 25% 33% <u>50%</u> 75%	Roland P. Carpenter, David H. Lyon, and Terry A. Hadsell, <i>Guidelines for Sensory Analysis in Food Product Development and Quality Control – Second Edition</i> (Gaithersburg: Aspen Publishers, Inc. 2000), 41-45. Harry T. Lawless and Hildegarde Heymann, <i>Sensory Evaluation of Food - Principles and Practices, Second Edition</i>, (New York: Springer Science & Business Media, LLC., 2010), 84.
--	--	--	---	---

			题目编号 100011691739 下列叙述是否正确？进 / 出测试是一种差别测试法。 <u>正确</u> 错误 Question ID: 100011691739 Is the following statement true or false? The in/out test is a difference test method. <u>True</u> False	
			题目编号 100011691740 下列何者最适合填入以下句子？在 _____ 中，品鉴者对样本进行评级，以评估该样本与标准或对照产品的整体差异程度。 <u>对照比较测试</u> 三角杯测 二选一测试 进 - 出测试 Question ID: 100011691740 Which of the following BEST completes this sentence? In a _____, the taster rates a sample on the overall degree of difference from a standard or control product. <u>Difference from control test</u> Triangulation test Duo-trio test In-out test

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
2.04.01 咖啡杯测概述 Overview of Coffee Cupping	1. 定义咖啡杯测 Define coffee cupping 2. 认识杯测可用于完 成描述性或情感性感 官评估 Recognize that cupping can be used to complete descriptive or affective sensory assessments	杯测是一种对咖啡进行感官评 估的方法，每个杯中有不同的 咖啡豆（独立研磨与冲泡）， 然后对每杯咖啡样本品尝数 次。杯测的目的是进行描述性 评估、情感性评估，或两者兼 之（综合评估）。 Cupping is a method for the sensory assessment of coffee, which involves tasting several cups per coffee sample, using a different set of coffee beans for each cup, which is ground and	题目编号 100011691745 下列叙述中，哪 两者 最能形容杯测？ <u>对咖啡进行感官评估的方法</u> <u>对每个咖啡样本进行多次品尝的方法</u> 测量咖啡中特定化学化合物的方法 撰写生豆合约的方法 Question ID: 100011691745 Which two of the following statements BEST describe cupping? <u>A method for the sensory assessment of coffee</u> <u>A method that involves tasting several cups per coffee sample</u> A method for measuring the presence of certain chemical compounds in coffee. A method for writing green coffee contracts.	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 98- 100 Britta Folmer, ed., <i>The Craft and Science of Coffee</i> , (San Diego: Elsevier Inc. as Academic Press, 2017),

		brewed independently. The purpose of a cupping may be to do a descriptive assessment, an affective assessment, or both (combined). 请勿混淆咖啡杯测的一般类别与特定的 SCA 咖啡价值评估规范的方法和表格。 Don't confuse the general category of coffee cupping with the specific SCA Coffee Value Assessment Protocol and Forms. 作为杯测法之一，SCA 描述性评估可系统化评估咖啡样本的感官特征。 SCA Descriptive Assessment is a cupping method used to systematically evaluate the	题目编号 100011691746 下列叙述是否正确？杯测仅可用于描述性评估。 正确 错误 Question ID: 100011691746 Is the following statement true or false? Cupping can be used for descriptive assessment only. True False	s.v. "Chapter 8 Cupping and Grading - Discovering Character and Quality." Coffee – Sensorial Analysis – Vocabulary ISO TC 34/SC 15N 2113
			题目编号 100011691747 下列叙述是否正确？咖啡杯测是感官评估的同义词。 正确 错误 Question ID: 100011691747 Is the following statement true or false? Coffee cupping is a synonym for sensory assessment. True False	

		sensory characteristics of a coffee sample. SCA 情感性评估则可评估个体的「质量印象」。 SCA Affective Assessment is a cupping method used to evaluate an individual's "impression of quality."	题目编号 100011691748 下列何者最适合填入以下句子？作为杯测法之一，SCA _____ 评估可用于评估一个个体的偏好或「质量印象」。 情感性 描述性 区别性 卓越杯（又称超凡杯） Question ID: 100011691748 Which of the following BEST completes this sentence? SCA _____ Assessment is a cupping method used to evaluate an individual's preference or "impression of quality". Affective Descriptive Discriminative Cup of Excellence	
2.04.02 SCA 咖啡价值评估标准规范的重要术语 Key Terms in the SCA Coffee Value Assessment Protocol	1.定义 SCA 咖啡价值评估标准规范中出现的重要术语 Define key cupping terms that appear in the SCA Coffee Value Assessment Protocol	复习进行 SCA 杯测过程时所使用到的术语，例如注水、浸泡以及破渣等。 Review terms used in the process of conducting an SCA cupping, such as pour, steep, crust break and more.	仅供教学，未列入施测内容 Taught not tested.	<i>A New System to Assess Coffee Value: Introducing the Beta Version of the Specialty Coffee Association's Coffee Value Assessment (April 2023), (PDF, London: SCA, 2023), 5-33.</i>

2.04.03 SCA 描述性评估表的专业术语 Terminology on the SCA Descriptive Form	1. 定义 SCA 咖啡价值评估描述性评估表所采用的术语 Define the terms on the SCA Coffee Value Assessment Descriptive Form	定义 SCA 咖啡价值评估描述性评分表的所有属性： Define all the attributes evaluated on the SCA Coffee Value Assessment Descriptive Form: • 干香 • <i>fragrance</i> • 湿香 • <i>aroma</i> • 风味 • <i>flavor</i> • 余韵 • <i>aftertaste</i> • 酸质 • <i>acidity</i> • 甜度 • <i>sweetness</i> • 口感 • <i>mouthfeel</i>	题目编号 100011691757 下列何者最能描述「湿香」在咖啡杯测术语中的意义？ <u>对冲泡咖啡的鼻前嗅觉感知</u> 味觉或鼻后嗅觉的甜味感知 咖啡在口中时的触感 一杯富含果香的咖啡 Question ID: 100011691757 Which phrase BEST describes the meaning of ‘aroma’ in coffee cupping terminology? <u>The orthonasal olfactory perception of the coffee brew.</u> The perception of gustatory or retronasal sweetness. The tactile perception of a brew while it is in the mouth. A cup with a prominent fruity aroma. 题目编号 100011691758 下列哪两者最能形容酸质？ <u>透过咖啡唤起的酸味感知</u> <u>一种可用于干或甜形容的属性</u> 主要与未熟豆有关的金属感知 舌尖上的不悦感知 Question ID: 100011691758 Which two of the following statements BEST describe acidity? <u>A perception of sour taste provoked by the brew.</u> <u>An attribute that could be described as dry or sweet.</u> A metallic sensation associated primarily with unripe coffee. An undesirable sensation at the tip of the tongue.	<i>A New System to Assess Coffee Value: Introducing the Beta Version of the Specialty Coffee Association’s Coffee Value Assessment (April 2023), (PDF, London: SCA, 2023), 22 – 24.</i>
---	---	---	---	--

			题目编号 100011691759 下列叙述是否正确？干香是对湿咖啡粉的嗅觉评估。 正确 <u>错误</u> Question ID: 100011691759 Is the following statement true or false? Fragrance is the olfactory assessment of the wet grounds. True <u>False</u>	
			题目编号 100011691760 下列有关 SCA 描述性评估表的叙述是否正确？感官特征的强度使用 0-15 进行评分。 <u>正确</u> 错误 Question ID: 100011691760 Is the following statement about the SCA Descriptive Form true or false? The intensity of a sensory characteristic can be rated using 15-point scales. <u>True</u> False	

		题目编号 100011691761 关于 SCA 描述性评分表 上的香气属性，下列哪两项叙述正确？ <u>杯测者可使用「CATA 列表」来描述香气的特征</u> <u>一杯具有低强度香气的咖啡在强度评级上会获得 5 分 或更低</u> 杯测者可使用九分制喜好度量表法来描述香气的强度 一杯具有不愉悦香气的咖啡在强度评级上会获得 10 分 或更高 Question ID: 100011691761 Which two of the following statements are true about the attribute of aroma on the SCA Descriptive Form? <u>A cupper can use the check-all-that-apply (CATA) list to describe the aroma's character.</u> <u>A coffee that has a low-intensity aroma would receive a 5 or below on the intensity scale.</u> A cupper can use the nine-point hedonic scale to describe the aroma's intensity. A coffee with an unpleasant aroma would receive a 10 or above on the intensity scale.	
		题目编号 100011691762 口感指的是下列哪两种？ <u>在舌头和上颚之间感知到的口中液体的触感</u> <u>对咖啡的重量、黏度、质地以及其它触觉特性的综合感知</u> 来自咖啡味道及鼻后嗅觉同时造成的感知 透过咖啡唤起的酸味感知 Question ID: 100011691762 Mouthfeel refers to which two of the following? <u>The tactile feeling of the liquid in the mouth perceived between the tongue and the roof of the mouth.</u> <u>A combined sensation of the coffee's weight, viscosity, texture, and other tactile properties.</u> The perception coming from both the taste of the brew and the brew's retronasal olfactory component. The perception of sour taste provoked by the brew.	

2.04.04 SCA 描述性评估 SCA Descriptive Assessment	1.筹备一场描述性杯测会 Prepare a descriptive cupping session 2.展示咖啡价值评估标准规范中所描述的杯测实务 Demonstrate the cupping practices described in the Coffee Value Assessment Protocol 3.使用 SCA 描述性评分表 Use the SCA Descriptive Form 4.使用描述性评估法来检验不同的产地和后制处理方法的咖啡 Examine coffees of different origins and processing methods using descriptive assessment	在本活动中，学员将根据咖啡价值评估规范以及 SCA 描述性评分表进行杯测。 In this activity, learners perform a cupping using the practices outlined in the SCA Coffee Value Assessment Protocol and the SCA Descriptive Form.	活动 2.04.04 详见附录 B 指示：活动准备指南 列入实作测验 Activity 2.04.04 See instructions in Appendix B: Activity Preparation Guide Tested on Practical Exam	<i>A New System to Assess Coffee Value: Introducing the Beta Version of the Specialty Coffee Association's Coffee Value Assessment (April 2023), (PDF, London: SCA, 2023), 22 – 24.</i> <i>A New System to Assess Coffee Value: Introducing the Beta Version of the Specialty Coffee Association's Coffee Value Assessment (April 2023), (PDF, London: SCA, 2023), 22 – 27.</i>
--	---	---	---	---

2.04.05 SCA 情感性评估表的专业术语 Terminology on the SCA Affective Form	1. 解释 SCA 咖啡价值评估情感性评估表上所使用的专业术语 Explain the terminology on the SCA Coffee Value Assessment Affective Form	<i>复习在描述性与情感性评估表上的属性定义。</i> <i>Review the definitions of the attributes that appear on both the descriptive and affective forms.</i> <i>定义并讨论 SCA 情感性评估表的额外评分标准与检查清单：</i> • 整体 • 一致性 • 瑕疵 <i>Define and discuss the additional scales and checklists present on the SCA Affective Form:</i> • overall • uniformity • defects	题目编号 100011697716 下列叙述是否正确？SCA 情感性评估表采用九分制（1-9）喜好度量表来衡量质量的印象。 <u>正确</u> 错误 Question ID: 100011697716 Is the following statement true or false? The SCA Affective Form uses nine-point hedonic scales to measure the impression of quality. <u>True</u> False 题目编号 100011697717 关于 SCA 情感性评估表上的酸质属性，下列叙述何正确？ <u>一杯具有良好酸质的咖啡，可获得 6 分或更高。</u> 一杯具有良好酸质的咖啡，可获得 4 分或更低。 高质量的酸质意味着酸质的强度也很高 高质量咖啡一般不讲究酸度 Question ID: 100011697717 Which of the following statements is true regarding the attribute of acidity on the SCA Affective Form? <u>A coffee that has an acidity with a positive impression of quality would receive a 6 or above.</u> A coffee that has an acidity with a positive impression of quality would receive a 4 or below. High quality acidity means the intensity of the acidity is also high. Acidity is generally something not sought after in high quality coffee.	<i>A New System to Assess Coffee Value: Introducing the Beta Version of the Specialty Coffee Association's Coffee Value Assessment (April 2023), (PDF, London: SCA, 2023), 24, 31 - 35</i>
---	---	--	---	---

		题目编号 100011697718 下列哪两者最能形容「一致性」？ <u>评定不一致杯数的属性</u> <u>咖啡批次均一性的指标</u> 咖啡吞咽后留下的印象 对咖啡质量的一般印象 Question ID: 100011697718 Which two of the following statements best describe uniformity? <u>An attribute rated as the number of non-uniform cups.</u> <u>An indicator of the coffee lot's homogeneity.</u> The impression left behind after a brew has been swallowed. The general impression of the quality of a coffee.	
		题目编号 100011697719 下列何者并非 SCA 情感性评估表上所列的瑕疵风味？ <u>发酵</u> 酚类 霉味 马铃薯 Question ID: 100011697719 Which of the following is NOT a defect listed on the SCA Affective Form? <u>Ferment</u> Phenolic Moldy Potato	

2.04.06 SCA 情感性评估 SCA Affective Assessment	1.筹备情感性杯测会 Prepare an affective cupping session 2.展示 SCA 咖啡价值评估规范中所描述的杯测标准 Demonstrate the cupping practices described in the SCA Coffee Value Assessment Protocol 3.使用 SCA 情感性评分表 Use the SCA Affective Form 4.使用情感性评估法来检验不同产地和后续处理方法的咖啡 Examine coffees of different origins and processing methods using affective assessment	在本活动中，学员将根据 SCA 咖啡价值评估规范以及 SCA 情感性评分表进行杯测。 In this activity, learners perform a cupping using the practices outlined in the SCA Coffee Value Assessment Protocol and the SCA Affective Form.	活动 2.04.06 详见附录 B 指示：活动准备指南 列入实作测验 Activity 2.04.06 See instructions in Appendix B: Activity Preparation Guide Tested on Practical Exam

5 Topics

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
2.06.01 感官描述小组的定义和目的 Definition and Purpose of a Sensory Descriptive Panel	1.定义并比较感官描述性小组与杯测小组有何不同 Define and contrast a sensory descriptive panel and a cupping group 2.感官评估小组的要求 Summarize the requirements of sensory panels	感官描述性小组是受过正式特定高度训练的团队，用于执行感官描述性分析。目的是根据标准程序品鉴和评估产品。通常，这类型的评估小组不会使用杯测法。 A sensory descriptive panel is a formal, specific, highly trained panel used for Sensory Descriptive Analysis. The purpose of this panel is to taste and evaluate a product based on standard procedures. Generally, this kind of panel does not use the cupping method.	题目编号 100011691781 下列何者最适合填入以下句子？感官描述性小组是 _____。 <u>根据标准程序品鉴以及评估产品的团体</u> 一群聚在一起讨论各自偏好的咖啡消费者 一名定期品鉴咖啡的咖啡专家 一群对咖啡进行分析测试的实验室技术人员 Question ID: 100011691781 Which of the following BEST completes this sentence? A sensory descriptive panel is _____. <u>a group of people whose purpose is to taste and evaluate a product based on standard procedures</u> a group of consumers who meet to discuss their preferred coffee a coffee expert who tastes coffee regularly a group of lab technicians who perform analytical tests on coffee	June E. Yantis, ed. <i>The Role of Sensory Analysis in Quality Control</i> (Philadelphia: American Society for Testing and Materials, 1992), 10. Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 20-22. Mario Roberto

		感官描述性小组有别于杯测小组（一群受过咖啡杯测训练，且可使用咖啡价值评估来填写描述性与情感性信息的人士） A sensory descriptive panel is different from a cupping group (a group of people trained in coffee cupping who can use Coffee Value Assessment practices to output both descriptive and affective information.) 感官评估小组是一个正式的评测工具，训练以及校正是该小组成功的必要条件。 The sensory panel is a formal measurement instrument. Training and calibration are necessary for a successful panel. 组成感官评估小组的目的<u>仅限</u>于品鉴产品并提出品鉴结果。对于这些结果的诠释以及根据这些诠释所做出的决定，并非评估小组的责任。	题目编号 100011691782 下列叙述是否正确？感官描述性小组通常使用杯测法来评估产品。 正确 <u>错误</u> Question ID: 100011691782 Is the following statement true or false? Sensory descriptive panels often use cupping to evaluate products. True <u>False</u> 题目编号 100011691783 设立感官评估小组通常需要下列哪些要素？（请选择所有适用选项） <u>受过训练的品鉴者</u> <u>标准问题 / 问卷</u> <u>准备事项的标准规范</u> <u>测试设计与分析计划</u> Question ID: 100011691783 A sensory panel setup typically requires which of the following? (Select all that apply.) <u>Trained tasters</u> <u>Standard questions/questionnaires</u> <u>A preparation protocol</u> <u>A test design and plan for analysis</u>	Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 86-91.
--	--	--	--	---

	The purpose of a sensory panel is ONLY to taste the product and generate a tasting result. The interpretation of these results and the decisions based on these interpretations are not the panel's responsibility. 设立评估小组通常需要： • 6 至 40 位受过训练的品鉴者 • 标准问题 / 问卷 • 准备事项的标准规范 • 测试设计 • 分析 • 设施 A panel setup typically requires: • 6 to 40 trained tasters • standard questions/ questionnaires • preparation protocol • test design • analysis • facilities 举例说明在各个咖啡领域感官评估小组或杯测小组的应用。 <i>Provide examples that illustrate sensory panels or cupping groups in various coffee businesses.</i>	题目编号 100011691784 下列叙述是否正确？「感官描述性小组」与「杯测小组」两者在意义上互通。 正确 <u>错误</u> Question ID: 100011691784 Is the following statement true or false? The terms 'sensory descriptive panel' and 'cupping group' are interchangeable. True <u>False</u>	
--	--	--	--

2.06.02 感官评估小组 优于单一品鉴者之处 Advantages of a Sensory Panel Over a Single Taster	1. 说明小组或团体优于单一品鉴者之处 State the advantages of a panel or group as opposed to a single taster 2. 认识为何必须分开小组中的产品专家、受过训练的测试者以及消费者 Recognize the importance of separating product experts, trained testers, and consumers on panels	小组或团体优于单一品鉴者之优点包括： • 更客观的结果 • 更少的偏见 • 更具统计学意义 The advantages of a panel or group over a single tester include: • more objective results • less bias • more statistically relevant 然而，有一位品鉴者总比没有来得好。 However, one taster is better than no tasters. 评估小组可以由产品专家、受过训练的品鉴者或消费者组成，但他们不应分配在同一个评估小组内。 Panels can be composed of product experts, trained tasters, or consumers. They should not be mixed within a panel. 毕竟，品鉴者受过训练，他们所提出的客观判断不同于消费	题目编号 100011691789 进行感官评估时，为何使用多名受过训练的品鉴者，会比单一品鉴者来得好？（请选择所有适用选项） <u>可以产出更具意义的数据</u> <u>减少偏见</u> 产生更多主观数据 增进团队的产品知识 Question ID: 100011691789 Why is it better to use several trained tasters as opposed to a single taster when conducting sensory assessments? (Select all that apply.) <u>It yields more significant data.</u> <u>It reduces bias.</u> It results in more subjective data. It increases the team's product knowledge. 题目编号 100011691790 下列叙述是否正确？由多位训练有素的品鉴者组成感官评估小组，可望呈现更具意义的结果。 <u>正确</u> 错误 Question ID: 100011691790 Is the following statement true or false? A sensory panel made of multiple, well-calibrated tasters will likely result in more significant results. <u>True</u> False	
---	---	--	---	--

		者的主观判断。 There is a difference between the objective judgment of a trained taster and the subjective judgment of consumers. 不同评估小组的结果可互相比 较。举例而言，可以将受过训 练的品鉴小组结果与消费者小 组的结果进行比较。 Results of different panels can be compared. For example, results from a trained taster panel could be compared with the results from a consumer panel.	题目编号 100011691791 下列叙述是否正确？感官评估无法仅由一名品鉴者进行。 正确 <u>错误</u> Question ID: 100011691791 Is the following statement true or false? A sensory assessment cannot be conducted with only one taster. True <u>False</u>	
			题目编号 100011691792 下列叙述是否正确？最成功的感官评估小组往往由专业品鉴者与消费者共同组成。 正确 <u>错误</u> Question ID: 100011691792 Is the following statement true or false? The most successful sensory panels contain a mix of professional tasters and consumers. True <u>False</u>	

2.06.03 筹备杯测会 Staging a Tasting Session	1. 针对杯测会的筹备、执行及结束，说明相关最佳执行方式。 State best practices associated with the preparation, execution, and conclusion of a tasting session	要求学员列出设置杯测会的筹备步骤，并根据需要填入空格。 <i>Ask learners to list the steps to setting up a tasting and then fill in the blanks as necessary.</i> 请确保述及这些标准： • 品鉴区域 • 准备区域 • 储存区域 • 干净用品 • 适当编号 • 书面标准 • 纪录系统 <i>Be sure to mention these standards:</i> • <i>tasting area</i> • <i>preparation area</i> • <i>storage area</i> • <i>cleaning supplies</i> • <i>proper coding</i> • <i>written protocols</i> • <i>documentation system</i>	题目编号 100011691813 下列何者为筹备杯测会的最佳执行方式？（请选择所有适用选项） <u>以随机的 3 位数代码将样本编码</u> <u>将样本以随机顺序呈现</u> <u>以双盲测试的方式准备样本</u> <u>检查设备仪器的校准</u> Question ID: 100011691813 Which of the following are best practices for setting up a tasting session? (Select all that apply.) <u>Code samples clearly with random 3-digit code</u> <u>Present samples in randomized order</u> <u>Prepare samples in a double-blind manner</u> <u>Check calibration of equipment</u> 题目编号 100011691814 下列何种样本编号无法确保匿名性以及限制偏见？ Question ID: 100011691814 Which of the following sample codes would NOT ensure anonymity and limit bias? <u>444</u> 785 364 189	Harry T. Lawless and Hildegarde Heymann, <i>Sensory Evaluation of Food - Principles and Practices, Second Edition</i>, (New York: Springer Science & Business Media, LLC., 2010), s.v. "Chapter 3 Principles of Good Practice."
---	--	---	---	--

		无论对于感官描述性小组或杯测团体，这些都很重要。 <i>These are important whether using a sensory descriptive panel or a cupping group.</i> 以随机三位数将样本编码，请勿在编号中重复数字（例如，避免 333）。 Code samples clearly with a random three-digit code. Do not repeat the number in the code (e.g., avoid 333).	题目编号 100011691815 下列叙述是否正确？与其他人进行品鉴或杯测时，使用非言语沟通是可以接受的。 正确 <u>错误</u> Question ID: 100011691815 Is the following statement true or false? It is acceptable to use non-verbal communication when tasting or cupping with others. True <u>False</u>	
--	--	---	---	--

	以随机顺序和双盲测试的方式展示样本。 Present samples in a randomized order and in a double-blind manner. 检查设备仪器的校准。 Check the calibration of equipment. 避免在品鉴期间交谈和使用非言语沟通。 Avoid talking and non-verbal communication during the tasting. 在杯测会完成后： • 记录所有品鉴者的评语 • 将评语 / 数据输入数据库备查 • 清洁 / 维护设备以确保运作正常 • 储存剩余的样本材料，以便必要时再次评估 After the tasting session is complete: • Document all notes from all tasters • Enter notes/data into a database for easy recall	题目编号 100011691816 在杯测会结束后，应完成下列哪些工作？（请选择所有适用选项） <u>记录所有品鉴者的评语</u> <u>将评语 / 数据输入数据库备查</u> <u>清洁 / 维护设备以确保运作正常</u> <u>储存剩余的样本材料，以便必要时再次评估</u> Question ID: 100011691816 Which of the following tasks should be completed after finishing a tasting session? (Select all that apply.) <u>Document all notes from all tasters</u> <u>Enter notes/data into a database for easy recall</u> <u>Clean/maintain equipment to ensure proper function</u> <u>Store leftover sample material for reevaluation if needed</u>	
--	--	--	--

		• Clean/maintain equipment to ensure proper function • Store leftover sample material for reevaluation if needed		
2.06.04 成功感官评估 的场地要求 Venue Requirements for Successful Sensory Assessment	1. 概述成功的感官评估在场地环境、家具、工具及设备上有何必要和建议事项。 Outline the essential and recommended aspects of environment, furnishings, tools, and equipment for a successful sensory assessment venue	使用照片或训练场地向学员介绍咖啡感官评估场地的基本元素，包括： • 空间 • 桌子（高脚桌，没有椅子） • 杯测小型器皿 • 定时器 • 适当的照明（如情况允许，请使用红色灯光） • 秤重与研磨设备 • 水壶 • 其它列于CSP 感官品鉴模块场地要求中的物品	题目编号 100011691797 下列何种环境要素是打造成功感官实验室的必备条件？（请选择所有适用选项） <u>红色灯光</u> <u>可控制的湿度与温度</u> <u>个人的品鉴设备</u> <u>安静的空间</u> Question ID: 100011691797 Which of the following environmental elements contribute to a successful sensory lab? (Select all that apply.) <u>Red light</u> <u>Controlled humidity and temperature</u> <u>Individual tasting equipment</u> <u>Silent place</u>	<i>SCA Protocols & Best Practices</i>, SCA (2018), s.v. “Cupping Protocols.” <i>Coffee Standards</i> (PDF, London: SCA, 2018), 9-11 <i>Coffee Standards</i> (PDF, London: SCA, 2018), 9-11 Thomas Oberthür, Peter Läderach, H.A. Jürgen Pohlen, and James H. Cock, ed. <i>Specialty Coffee: Managing Quality</i>. (International

		<i>Use photos or the training venue to introduce the learners to essential elements of a sensory assessment venue for coffee, including:</i> • room • table (high table, no chairs) • cupping small wares • timers • proper lighting (red light if possible) • weighing and grinding equipment • kettles • other items listed on the venue requirements for the CSP Sensory Skills module <i>针对其他最佳实务进行讨论，包括：</i> • 个人品鉴区域 • 温度控制 • 照明控制 • 洗碗机 <i>Facilitate a discussion about other best practices, including:</i> • booths for individual tasting • temperature control • lighting control • dishwashers	题目编号 100011691798 下列叙述是否正确？SCA 建议在 SCA 杯测期间仅使用高脚桌，不需要椅子。 <u>正确</u> 错误 Question ID: 100011691798 Is the following statement true or false? The SCA recommends high tables and no chairs for SCA cuppings. <u>True</u> False 题目编号 100011691799 在进行标准化感官评估的杯测实验室中，需要下列哪些工具？（请选择所有适用选项） <u>磅秤</u> <u>可控温的煮水壶</u> <u>可控制的水质</u> 样本烘焙机 Question ID: 100011691799 Which of the following tools are needed inside the cupping lab for a standardized sensory evaluation? (Select all that apply.) <u>Weight scale</u> <u>Controlled temperature boiler</u> <u>Controlled water</u> Sample roaster	Plant Nutrition Institute, 2012), s.v “Chapter 3.4 Laboratory Set, Practices and Principles.”
--	--	---	--	--

		讨论根据现有设备可用性进行的调整，以及设备在模式上的差异（例如，旋转式 vs 固定式桌子，水槽式 vs. 手持式吐桶等）。 <i>Discuss adaptations based on available equipment and how equipment can vary in modality (e.g., a spinning vs. stationary table, a sink spittoon vs. handheld, etc.)</i> 环境应保持清洁安静，湿度与温度受到控制。 The environment should be clean and quiet, with controlled humidity and temperature. 遵循书面标准以进行重复且一致的测试，制定或遵循纪录以及储存感官数据的步骤。 Follow written protocols for repeatable and consistent testing. Develop or follow the process for recording and storing sensory data.	题目编号 100011691800 打造成功的感官实验室需要下列何者？ <u>记录以及储存感官数据的步骤</u> 生豆分级筛网 闻香瓶 以上皆非 Question ID: 100011691800 Which of the following is required for a successful sensory lab? <u>A process for recording and storing sensory data</u> Green grading screens Aroma vials None of the above	
--	--	--	--	--

2.06.05 感官评估的最佳实务 Sensory Assessment Best Practices	1. 针对感官评估说明常见的最佳实务及礼仪 State some common best practices and etiquette for sensory assessment	倘若熟练的品鉴者人数有限，可重复品鉴以增加结果的准确度。 If the number of skilled tasters is limited, make repetitions to increase the accuracy of the results. 品鉴者因摄入咖啡因感到不适时，建议他们离开评估小组担任其它职位，或限制他们的咖啡因摄取量并经常补充水分。 If a taster is struggling with caffeine consumption, advise that they leave the panel for a different position or limit their consumption and hydrate regularly. 尽可能避免无意识偏见，以确保评估小组的结果具有意义。 Reduce unconscious bias whenever possible to ensure the panel results are meaningful. 与他人进行品鉴 / 杯测时，最好能保持安静直到品鉴完成。 When tasting/cupping with others, it is always best to remain silent until the tasting is complete.	题目编号 100011691805 进行感官测试时，倘若熟练的品鉴者人数有限，可以采取下列哪个措施来提高感官测试结果的准确性？ <u>多次重复进行</u> 参考先前的结果 邀请未受过训练的品鉴者 以上皆是 Question ID: 100011691805 What can be done to increase the accuracy of results when conducting a sensory test if the number of skilled tasters is limited? <u>Make repetitions</u> Merge with previous results Include untrained tasters All of the above 题目编号 100011691806 若品鉴者在摄入大量咖啡因时感到不适，评估小组组长可建议对方采取哪两种行动？ <u>离开评估小组并担任其它职位</u> <u>限制咖啡因摄取量并定期补充水分</u> 采纳另一位训练有素的品鉴者意见 置之不理并结束品鉴 Question ID: 100011691806 A taster says they do not feel well when they consume a lot of caffeine. Which two actions could the panel leader suggest? <u>Leave the panel for a different position</u> <u>Limit caffeine consumption and hydrate regularly</u> Adopt the opinions of another well-calibrated taster Ignore the discomfort and finish the tasting	Harry T. Lawless and Hildegard Heymann, <i>Sensory Evaluation of Food - Principles and Practices, Second Edition</i>, (New York: Springer Science & Business Media, LLC., 2010), s.v. "Chapter 3 Principles of Good Practice."
---	---	---	--	---

		根据右侧字段列出的参考数据以及实际经验，讨论其它适当的最佳实务。 <i>Discuss additional best practices from references listed in the righthand column and practical experience as appropriate.</i>	题目编号 100011691807 下列何者最适合填入以下句子？为确保感官评估小组的结果具有意义，应减少 _____。 <u>无意识偏见的影响</u> 品鉴者人数 杯测匙的大小 杯子之间的距离 Question ID: 100011691807 Which of the following BEST completes this sentence? To ensure that sensory panel results are meaningful, reduce _____. <u>the impacts of unconscious bias</u> the number of tasters the size of the tasting spoon the distance between cups 题目编号 100011691808 下列叙述是否正确？与其他人一同进行品鉴 / 杯测时，最好能保持安静直到品鉴完成。 <u>正确</u> 错误 Question ID: 100011691808 Is the following statement true or false? When tasting or cupping with others, it is best to remain silent until the tasting is complete. <u>True</u> False	
--	--	---	---	--

2.07 | 章节 | 建立感官评估小组

6 个主题

| Section | SETTING UP A SENSORY PANEL

6 Topics

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
2.07.01 小组以及测验 选择 Panel and Test Selection	1.判断何种类型的评估 小组与测试最适合目标 Determine what type of panel and what type of test is best suited for an objective	复习2.01.02 所讨论的三种感官 方法。 <i>Review the three sensory methods discussed in 2.01.02.</i> 讨论不同评估小组的组成以及 性质： • 专家 • 受过训练的品鉴者 • 消费者 <i>Discuss the makeup and nature of different panels:</i> • experts • trained tasters • consumer	题目编号 100011691821 针对下列问题选出最合适的感官测试类型。 (A) 产品之间是否存在差异？ (B) 此样本的属性 / 风味轮廓为何？ (C) 我的客户是否喜欢该咖啡？ A = 差别测试 B = 描述性测试 C = 情感性测试 Question ID: 100011691821 Select the best type of sensory test to answer each of the following questions. (A) Is there a difference between the products? (B) What are the attributes/flavor profile of this sample? (C) Do my customers like the coffee? A = Difference Test B = Descriptive Test C = Affective Test	Roland Carpenter, David H. Lyon and Terry A. Hadsell, <i>Guidelines for Sensory Analysis in Food Product Development and Quality Control - Second Edition</i> (Gaithersburg: Aspen Publishers, Inc., 2000), s.v. "Chapter 8 - Putting Sensory Analysis into Practice," 35-53.

		讨论哪些情况能让学员练习如何辨别最佳小组/测试组合，以完成特定目标。 <i>Discuss examples that allow learners to practice identifying the best panel/test combinations for particular objectives.</i> 可能情况包括： • 产品开发 • 创新 • 重新配方 • 消费者偏好 • 质量管理 • 趋势追踪 • 在职训练 • 产品取样 <i>Example situations might include:</i> • <i>product development</i> • <i>innovation</i> • <i>reformulation</i> • <i>consumer preference</i> • <i>quality control</i> • <i>trend follow up</i> • <i>on the job training</i> • <i>product sampling</i>	题目编号 100011691822 进口商想要辨别特定咖啡的感官风味时，应该使用何种类型的测试？ 描述性测试 差别测试 情感性测试 偏好测试 Question ID: 100011691822 An importer wants to identify the sensory profile of a particular coffee. What type of test should be used? Descriptive test Difference test Affective test Preference test	
			题目编号 100011691823 烘焙业者想要测试消费者偏好哪种烘焙曲线时，应该使用何种类型的测试？ 消费者评估小组 受过训练的小组 咖啡师焦点小组 评估小组 Question ID: 100011691823 A roasting company wants to test which roast profile their customers prefer. What type of panel should be used? Consumer panel Trained panel Barista focus group Expert panel	

			题目编号 100011691824 烘豆业者想要测试全新混豆配方是否与目前使用的混豆配方有所不同，应该使用何种类型的测试？ <u>差别测试</u> 喜好度测试 描述性测试 偏好测试 Question ID: 100011691824 A roasting company wants to test if a new blend recipe differs from the current blend recipe. What type of test should be used? <u>Difference test</u> Hedonic test Descriptive test Preference test	
2.07.02 感官小组提案 Sensory Panel Proposals	1. 为各种咖啡商业模式创建感官评估小组提案 Create sensory panel proposals for various coffee business models	请学员选择一种商业情境，然后引导他们根据假设的资源，提案哪种类型的小组最适合此情况。 <i>Ask learners to select a business situation and then prompt them to propose what type of panel would be best suited for this business based on assumed resources.</i>	题目编号 100011691829 下列叙述是否正确？对于小型咖啡生意，最好将老板纳入感官评估小组。 正确 <u>错误</u> Question ID: 100011691829 Is the following statement true or false? In a small coffee business, it is best to include the owner in the sensory panel. True <u>False</u>	

		学员将需要： • 描述该商业情境。 例如：这是一间咖啡店、小型烘豆厂、国际生豆贸易或其它？ • 辨别该企业所面临的挑战，以证明有必要建立一个感官评估小组。 • 针对该生意所面临的情况提议最适合的感官评估小组类型。 Learners will need to: • describe this business. For example, is it a coffee shop, small roastery, international green coffee trading or other? • identify the challenge facing the business that justifies a sensory panel. • propose the best type of panel for this situation at this business.	题目编号 100011691830 下列叙述是否正确？感官评估小组对大型咖啡业者才有价值可言。 正确 <u>错误</u> Question ID: 100011691830 Is the following statement true or false? A sensory panel is only valuable to large coffee companies. True <u>False</u> 题目编号 100011691831 感官评估小组如何为咖啡烘焙业增加价值？（请选择所有适用选项） <u>提升质量管理</u> <u>提高产品一致性</u> <u>客观的感官评估</u> 在咖啡圈中强化品牌认知度 Question ID: 100011691831 How can a sensory panel add value to a coffee roasting business? (Select all that apply.) <u>Improved quality control</u> <u>Improved product consistency</u> <u>Objective sensory assessment</u> Better brand recognition in the coffee community	
--	--	---	---	--

			题目编号 100011691832 在下列哪两种情形中，感官评估小组对于评估产品质量的变化具有帮助？ <u>变更烘豆机尺寸</u> <u>变更烘豆机品牌</u> 安装新的瓦斯管线 安装新的银皮收集筒 Question ID: 100011691832 In which two of the following situations would a sensory panel be helpful for evaluating changes to product quality? <u>Change in the size of the roasting machine</u> <u>Change in the brand of the roasting machine</u> New gas line installed New chaff collector installed	
2.07.03 小组成员遴选 Panelist Screening	1. 阐述遴选小组成员的最佳实务 Describe best practices for screening panel members	说明遴选品鉴者对于小组的重要性。 <i>Explain the importance of screening tasters for a panel.</i> 招募具强烈动机的候选人，提醒候选人身为品鉴者的职责。 Recruit motivated candidates. Remind candidates about their duties as tasters. 小组成员对于任何测试应至少具备正常感官感知能力。进行	题目编号 100011691838 下列何者是成立感官评估小组的必备条件？ <u>品鉴者的能力需经过筛选</u> 纳入公司负责人 在小组中同时安排超强品鉴者和能力较差的品鉴者 排除任何不具备咖啡知识的人员 Question ID: 100011691838 Which of the following is necessary to set up a sensory panel? <u>The ability of the tasters is screened</u> The inclusion of company owner The presence of both supertasters and poor tasters on the panel The exclusion of anyone without coffee knowledge	Morten Meilgaard, Gail Vance Cville, and B. Thomas Carr, <i>Sensory Evaluation Techniques, 4th Edition</i> (Boca Raton: CRC Press LLC., 2006), s.v. "Chapter 9."

		一系列测试，以确保候选人能够表达描述性语言。 Panelists should have at least normal sensory sensitivity to any tests. Conduct a series of tests to ensure the candidate can formulate descriptive language. 筛选小组成员时，应评估是否具备适当能力。例如，利用三角杯测评估品鉴者能否辨别样本间的差异。 Panelists should be screened in a manner that assesses the appropriate ability. For example, to evaluate a taster's ability to	题目编号 100011691839 下列何种方法是筛选品鉴者对于五种基本味道敏感度的最佳方式？ <u>准备浓度渐强的不同溶液，要求品鉴者辨识出该基本味道。</u> 要求他们准确描述深焙与浅焙的咖啡 使用生产样本建立一个进 / 出测试 设置一个三角杯测，观察他们能否辨别两个样本之间的差异。 Question ID: 100011691839 Which of the following is the best way to screen a taster's sensitivity to the five basic tastes? <u>Have them identify each basic taste in coded solutions at increasing levels of intensity</u> Have them accurately describe a dark roast and a light roast Set up an in/out test with production samples Set up a triangulation test and see if they can identify the difference between two samples	
--	--	---	---	--

		tell the difference between samples, use a triangulation test. 品鉴仰赖感知的敏锐度，而非在公司内的职等、年龄或是经验。 Tasting relies on sensation acuity, not on stature within a company hierarchy, age, or experience. 应避免非品鉴者加入小组。 Non-tasters should be avoided on a panel.	题目编号 100011691840 下列何者最能看出品鉴者能否辨别不同咖啡样本的差异？ <u>进行三角杯测</u> 请他们品尝两款咖啡并且详述其差异 进行配对偏好测试 进行情感性评估 Question ID: 100011691840 Which of the following is the best way to screen a taster's ability to discriminate the differences between coffee samples? <u>Perform a triangulation test</u> Ask them to taste two coffees and describe the differences in detail Perform a paired preference test Perform an affective assessment	
			题目编号 100011691841 下列叙述是否正确？建立感官小组时，筛选品鉴人员的最佳方式为依据年龄和经验。 正确 <u>错误</u> Question ID: 100011691841 Is the following statement true or false? When setting up a panel, the best way to screen tasters is by age and experience True <u>False</u>	

			题目编号 100011691842 下列叙述是否正确？一旦某品鉴员在一个感官小组中的表现通过验证，即有资格加入其它小组。 正确 <u>错误</u> Question ID: 100011691842 Is the following statement true or false? Once a taster's performance is validated in one panel, they are then eligible to join any other panel. True <u>False</u>	
2.07.04 感官评估小组训练 Sensory Panel Training	1. 确定准备感官评估小组训练课程的最佳实践 Identify best practices for preparing a sensory panel training program	培训专业的品鉴小组是一段漫长过程，一个毫无经验的品鉴者组成小组时，需要平均六个月的时间进行适当训练。 Training a professional tasting panel is a long process. A panel of tasters with no experience can take an average of six months for proper training. 举例说明SCA杯测和生产的培训计划。 Give examples of training	题目编号 100011691847 经营一支感官评估小组需要下列哪三种元素？ <u>至少两名品鉴者</u> <u>定期校正</u> <u>参与与标准</u> 专业学历 Question ID: 100011691847 Running a sensory panel requires which three of the following elements? <u>More than one taster</u> <u>Regular calibration</u> <u>References and standards</u> A professional degree	Roland P. Carpenter, David H. Lyon, and Terry A. Hadsell, <i>Guidelines for Sensory Analysis in Food Product Development and Quality Control – Second Edition</i> (Gaithersburg: Aspen Publishers, Inc. 2000), 41-45. Roland P. Carpenter, David H. Lyon, and Terry A. Hadsell, <i>Guidelines for Sensory Analysis in Food Product</i>

		<i>programs for SCA cupping and production.</i> 经营一支感官评估小组需要至少两名品鉴者，再加上定期校正、参考和标准。 Running a sensory panel requires more than one taster, regular calibration, and references and standards. 为感官评估小组准备培训课程时，应考虑可用的公司资源、小组规模以及感官评估类型。 When preparing a training program for a sensory panel, consider available company resources, the size of the panel, and the types of sensory assessment being conducted. 若时间许可，要求学员针对个人业务或发展，量身设计专属的小组成员训练课程。 <i>If time allows, ask learners to</i>	题目编号 100011691848 为感官评估小组准备培训课程时，应考虑下列那些细节？ 可用的公司资源 小组规模 感官评估的类型 <u>以上皆是</u> Question ID: 100011691848 Which of the following details should be considered when preparing a training program for a sensory panel? Available company resources The size of the panel The types of sensory assessment being conducted <u>All of the above</u> 题目编号 100011691849 下列叙述是否正确？记录感官评估小组的结果有其重要性。 <u>正确</u> 错误 Question ID: 100011691849 Is the following statement true or false? It is important to document sensory panel results. <u>True</u> False	<i>Development and Quality Control – Second Edition</i> (Gaithersburg: Aspen Publishers, Inc. 2000), 82-83. Alejandra M. Muñoz, Gail Vance Civile, and B. Thomas Carr, <i>Sensory Evaluation In Quality Control</i> (New York: Springer Science+Business Media 1992), 84-94, 179-189, 154-158, 126-133.
--	--	--	--	---

		<i>design their own panelist training program tailored to their business or personal development.</i>	题目编号 100011691850 以下是为感官评估小组准备培训计划的步骤，请依先后顺序排列。 遴选品鉴者 集结评估小组 依据感官分析目标进行校正 定期测试以及校正小组成员 = 「1」 B = 「2」 C = 「3」 D = 「4」 Question ID: 100011691850 Place the following steps to preparing a training program for a sensory panel in order from first to last. Screen tasters Assemble panel Calibrate on sensory analysis goals Test and calibrate panel members regularly A = 「1」 B = 「2」 C = 「3」 D = 「4」	
--	--	--	--	--

2.07.05 感官表现的测试与校正 Sensory Performance Testing and Calibration	1. 认识定期检查感官评估小组表现并书面化这些检查标准规范的重要性。 Recognize the importance of checking sensory panel performance regularly and documenting protocols for these checks	检查感官评估小组的表现和校正有其必要，如同检查任何其他分析仪器一样。 It is important to check the performance and calibration of sensory panels just like any other analytical instrument. 缺乏动机、敏感度钝化和习惯化都可能导致评估小组表现欠佳。 Lack of motivation, desensitization, and habituation can all cause panel performance to suffer. 举例说明评估小组的偏差情况，例如某些品鉴者变得缺乏动机、习惯化、敏感度钝化、校正不准确等情况。 Give an example of panel deviation, such as certain tasters becoming unmotivated, habituated, desensitized, out of calibration, etc.	题目编号 100011691855 感官评估小组的表现和校正应该多久检查一次？ <u>取决于评估小组的规模、公司资源，以及内部品保标准</u> 每天 每月 评估小组结果有误时再检查即可 Question ID: 100011691855 How often should the performance and calibration of a sensory panel be checked? <u>It depends on the size of the panel, company resources, and internal quality assurance standards</u> Every day Monthly Only when the panel results show errors 题目编号 100011691856 下列叙述是否正确？定期检查感官评估小组的表现与校正有其必要。 <u>正确</u> 错误 Question ID: 100011691856 Is the following statement true or false? It is important to regularly check the performance and calibration of a sensory panel. <u>True</u> False	Roland P. Carpenter, David H. Lyon, and Terry A. Hadsell, <i>Guidelines for Sensory Analysis in Food Product Development and Quality Control – Second Edition</i> (Gaithersburg: Aspen Publishers, Inc. 2000), 43. Roland P. Carpenter, David H. Lyon, and Terry A. Hadsell, <i>Guidelines for Sensory Analysis in Food Product Development and Quality Control – Second Edition</i> (Gaithersburg: Aspen Publishers, Inc. 2000), 137.
--	--	--	---	--

		检查频率取决于评估小组规模、公司资源，和内部品保标准。 The frequency of these checks depends on the size of the panel, company resources, and internal quality assurance standards. 最好制定并保存一份有关检查表现和校正的书面标准规范文件。 It is best to develop and maintain a written document of standard protocols for checking performance and calibration.	题目编号 100011691857 下列叙述是否正确？以口头方式拟定评估小组表现的检查标准即可。 正确 <u>错误</u> Question ID: 100011691857 Is the following statement true or false? Verbal agreement is sufficient for developing and maintaining standard protocols for checking panel performance. True <u>False</u>	
			题目编号 100011691858 下列何者不是造成评估小组表现欠佳的原因？ <u>偏好的变更</u> 缺乏动机 敏感度钝化 习惯化 Question ID: 100011691858 Which of the following conditions would NOT cause a panel's performance to suffer? <u>Changes in preference</u> Lack of motivation Desensitization Habituation	

2.07.06 业务运用 Applications in Business	1. 找出建立感官评估计划的两大步骤。 Identify the two primary steps to set up a sensory program. 2. 复习感官课程的关键需求。 Review key requirements for a sensory program.	感官评估计划的各层面会因业务需求和可用资源而调整。 The aspects of the sensory program will change due to the business's needs and available resources. 建立感官评估计划应遵循以下两步骤： 步骤 1 - 确定并制定目标与目的。 步骤 2 – 依据可用资源（时间、预算、设备以及人员）设计评估计划内容。	题目编号 100011691863 对于以卡布奇诺与拿铁为产品主力的咖啡店，采用下列何者评估咖啡是找到理想烘焙曲线的最佳方式？ <u>使用烘焙样本制作卡布奇诺与拿铁</u> 使用 SCA 杯测标准对生豆进行杯测 制作冲泡咖啡并进行品鉴 制作浓缩咖啡并进行品鉴 Question ID: 100011691863 A café sells mostly cappuccinos and lattes. What is the best way to evaluate coffees for finding the best roast profile? <u>Prepare cappuccinos and lattes using roast prototypes</u> Cup the green coffee using the SCA Cupping Protocol Tasting the finished product as brewed coffee Tasting the finished product as espresso	Britta Folmer, ed., <i>The Craft and Science of Coffee</i>, (San Diego: Elsevier Inc. as Academic Press, 2017), 419 Britta Folmer, ed., <i>The Craft and Science of Coffee</i>, (San Diego: Elsevier Inc. as Academic Press, 2017), 437 Roland P. Carpenter, David H. Lyon, and Terry A. Hadsell, <i>Guidelines for Sensory Analysis in Food Product Development and Quality Control – Second</i>
---	--	---	---	---

		Those setting up sensory programs need to follow these two steps: Step 1 - Identify and formulate the objectives and goals. Step 2 - Design according to the available resources (time, budget, equipment, and personnel). 请记住适当的测试环境、测试标准和纪录留存的重要性。 Recall the importance of an appropriate testing environment, protocols, and record keeping. <i>提醒学员采用最能直接反应他们试图回答问题的感官测试方法。</i> <i>Remind learners to use the sensory test method that most directly reflects the question they are trying to answer.</i>	题目编号 100011691864 若咖啡品鉴者没有计算机数据库时，下列何者最有助于收集品鉴资料？ <u>收集、整理以及储存个人品鉴表格</u> 在共享的笔记本内记录重要发现 以随机顺序讨论个别品鉴者的分数 讨论最资深品鉴者给出的评分，并询问其他品鉴者同意与否。 Question ID: 100011691864 A coffee taster does not have a computer database. What is the best way for them to collect tasting data? <u>Collect, organize, and store individual tasting forms</u> Document key findings in a shared notebook Discuss individual tasters scores in a random order Discuss the scores of the most senior person and ask if others agree or disagree	<i>Edition (Gaithersburg: Aspen Publishers, Inc. 2000), s.v. "Chapter 8 - Putting Sensory Analysis into Practice."</i>
			题目编号 100011691865 下列何者对于有效的情感性感官评估计划是非必要条件？ <u>聘请一位有经验的品鉴者</u> 适当的测试环境 为样本编号 问题简单明了 Question ID: 100011691865 Which of the following is NOT necessary for an effective sensory evaluation program? <u>Hiring an experienced taster</u> Appropriate testing environment Coded samples Clear and simple questions	

			题目编号 100011691866 在商业环境中进行感官评估的成功要件，包括下列哪两项？ <u>标准规范</u> <u>纪录</u> 超过 50 名小组成员 SCA 描述性评分表的复本 Question ID: 100011691866 Successful sensory assessment in a business requires which two of the following? <u>Protocols</u> <u>Record keeping</u> More than 50 panelists Copies of the SCA Descriptive Assessment Form

2.08 | 章节 | 进 / 出测试

2 个主题

2.08 | Section | IN/OUT TESTS

2 Topics

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
2.08.01 进 / 出测试的 定义与目的 In/Out Test Definition and Purpose	1. 定义进 / 出测试 Define the in/out test 2. 阐述进 / 出测试的目的 State the purpose of an in/out test	进 / 出测试，又称为合格 / 不合格测试，某些进 / 出测试法也包括对照比较测试，包含了与评比标准的整体差异程度进行评分。 The in/out test is also known as pass/fail. Some in/out methods will also include a difference from control test, which involves rating the overall degree of difference from the standard. 透过实际示范解释进 / 出测试。 Explain an in/out test through practical demonstration.	题目编号 100011691871 下列何者最适合填入以下句子？参考样本的用途是 _____。 <u>判断其它产品是否符合期望标准</u> 指称某特定生产批次 让咖啡店赠送给消费者 让进口商寄送给烘豆业者 Question ID: 100011691871 Which of the following BEST completes this sentence? A reference sample is _____. <u>a sample used to determine whether other products meet desired standards</u> a sample that refers to a specific production batch a sample given to a café customer a sample that an importer sends to a roasting company	Alejandra M. Muñoz, Gail Vance Civile, and B. Thomas Carr, <i>Sensory Evaluation In Quality Control</i> (New York: Springer Science+Business Media 1992), 140-141 Harry T. Lawless and Hildegarde Heymann, <i>Sensory Evaluation of Food - Principles and Practices, Second Edition</i> , (New York: Springer Science & Business Media, LLC., 2010), 84.

		这是咖啡烘焙质量保证中特别常用的核心方法，通常由少数受过训练的品鉴者进行。 This is a core methodology used particularly in coffee roastery quality assurance, very often with a small number of trained tasters. 这是一种根据参照物的简单方法，参考样本可以是实物样本或是已知规格，且适用于例行测试。 It is a simple method based on a reference, which can be a physical sample or known specification, and is good for routine testing. 讨论拥有参考样本的挑战。 <i>Discuss the challenges of having a reference sample.</i> 解释量表的创建和使用，以及如何在简单感官量表上进行标准化和校正，有几种不同的问卷量表。	题目编号 100011691872 下列叙述是否正确？某些进 / 出测试法含有对照比较测试。 <u>正确</u> 错误 Question ID: 100011691872 Is the following statement true or false? Some in/out methods include a difference from control test. <u>True</u> False
			题目编号 100011691873 进 / 出测试法最适用于下列哪两种场景？ <u>测量产品间的差异</u> <u>判断产品是否符合规格</u> 建立产品描述 了解消费者偏好 Question ID: 100011691873 The in/out test method is best used for which two of the following scenarios? <u>Measuring difference between products</u> <u>Determining if a product meets specifications</u> Creating product descriptions Understand what customers prefer

		<i>Explain creation and use of scales and how it requires standardization and calibration on simple sensory dimensions. There are different questionnaire scales.</i> <i>请学员描述可以应用该方法的三种情形。</i> <i>Ask learners to describe three situations where they can apply the method.</i> 二选一测试可做为替代方案。 The duo-trio can alternatively be used.	题目编号 100011691874 使用进 / 出测试法时，可使用下列哪两类感官测试？ <u>对照比较测试</u> <u>合格 / 不合格测试</u> 感官风味测试 二选一测试 Question ID: 100011691874 Which two types of sensory tests can be utilized when using the in/out method? <u>Difference from control</u> <u>Pass/fail</u> Sensory profiling Duo-Trio	
--	--	--	--	--

2.08.02 进 / 出测试的步骤 Steps of the In/Out Test	1. 识别进 / 出测试的步骤。 Identify the steps of an in/out test.	<i>使用一个视觉的进 / 出测试作为初始范例。接着进入咖啡感官进 / 出测试。</i> 进 / 出测试的步骤应该包含： 1.定义产品规格和个别评估的限制。 2.建立问卷 / 评分量表。 3.定义通过率。 4.与受过训练的品鉴者（们）一同执行。 5.分析结果并做出决策。 <i>Use a visual in/out test as an initial example. Then, move to a coffee sensory in/out test.</i> The steps of the in/out test should include: 1. Define product specifications and limits for individual evaluation. 2. Create a questionnaire/scale. 3. Define pass rate. 4. Run session with trained taster(s). 5. Analyze results and make decision(s).	题目编号 100011691878 以下为进/出测试的设计步骤，请依正确顺序排列。 (A) 定义产品规格和个别评估的限制 (B) 建立问卷 / 评分量表 (C) 定义通过率 (D) 与受过训练的品鉴者一同执行 (E) 分析结果并做出决策 A = 「1」 B = 「2」 C = 「3」 D = 「4」 E = 「5」 Question ID: 100011691878 Place the steps for designing an in/out test in the correct order. (A) Define product specifications and limits for individual evaluation (B) Create a questionnaire/scale (C) Define pass rate (D) Run session with trained taster(s) (E) Analyze results and make decision(s) A = "1" B = "2" C = "3" D = "4" E = "5" 题目编号 100011691879 制定进 / 出测试包含下列哪些步骤？ 定义产品规格 建立问卷 定义通过率 <u>以上皆是</u> Question ID: 100011691879 Developing an in/out test includes which of the following steps? Defining product specifications Creating a questionnaire Defining a pass rate <u>All of the above</u>	Alejandra M. Muñoz, Gail Vance Civile, and B. Thomas Carr, <i>Sensory Evaluation In Quality Control</i> (New York: Springer Science+Business Media 1992), 1451-1467.
---	---	--	--	---

			题目编号 100011691880 下列叙述是否正确？执行进 / 出测试时，应该在分析结果之前先建立问卷或评分量表。 <u>正确</u> 错误 Question ID: 100011691880 Is the following statement true or false? When conducting an in/out test, questionnaires or scales should be created prior to analyzing results. <u>True</u> False	
	2. 示范进 / 出测试的步骤 Demonstrate the steps of an in/out test	在本活动中，学员将对咖啡熟豆执行简单的进 / 出测试 In this activity, learners practice a simple in/out test of a roasted coffee product.	活动 2.08.02A Activity 2.08.02A 详见附录 B 指示：活动准备指南 See instructions in Appendix B: Activity Preparation Guide	Alejandra M. Muñoz, Gail Vance Civile, and B. Thomas Carr, <i>Sensory Evaluation In Quality Control</i> (New York: Springer Science+Business Media 1992), 1451-1467. Alejandra M. Muñoz, Gail Vance Civile, and B. Thomas Carr, <i>Sensory Evaluation In Quality Control</i> (New York: Springer Science+Business Media 1992), 145-167.

	3. 比较三角杯测 vs. 进 / 出测试法 Compare the triangulation test method vs. in/out method	在本活动中，学员将回顾三角杯测章节并讨论其应用范围，例如品管、新品开发、改变烘焙曲线、更换供货商以及改变用水等。 In this activity, learners recall the triangulation section and participate in a discussion on the areas of application, such as quality control, new product development, changes in roast profile, changes in supplier, changes in water and more.	活动 2.08.02B Activity 2.08.02B 详见附录 B 指示：活动准备指南 See instructions in Appendix B: Activity Preparation Guide	
--	--	---	--	--

2.09 | 章节 | 分析测试

1 个主题

| Section | ANALYTICAL TESTS

1 Topic

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
2.09.01 分析测试 Analytical Testing	1. 区别分析测试与感官测试 Differentiate between analytical and sensory testing 2. 列举咖啡实验室中常见的分析测试 List common analytical tests performed in coffee labs	常见的分析测试可以用来支持感官评估的结果。 Common analytical tests can be used to support results found in sensory assessments. 例如 For example: - 烘焙发展不足或过度发展的风味与产品规格不符时，可使用烘焙颜色分析。 - underdeveloped or overdeveloped flavors that differ from product specification can	题目编号 100011691886 下列何者并非分析测试？ SCA 描述性评估 氧气分析 包装密封压力测试 色彩光谱学 Question ID: 100011691886 Which of the following is NOT an analytical test? SCA Descriptive Assessment O₂ analysis Bag seal pressure test Color spectrometry	Thomas Oberthür, Peter Läderach, H.A.Jürgen Pohlen, and James H. Cock, ed. <i>Specialty Coffee: Managing Quality</i>. (International Plant Nutrition Institute, 2012), 257-260.

	3. 理解分析测试如何用于支持感官评估 Recognize how analytical tests can be used to support sensory assessments	also be supported by roast color analysis. • 老化、霉味或陈旧潮湿风味可以透过水分含量分析来量测。 • faded, moldy, or musty flavors could be additionally supported with moisture content analysis. • 密度测量是影响整体咖啡质量 / 具体风味的指针，也会影响杯测的样本准备。 • density measurement may be an indicator of general cup quality potential/cup profile and may also influence sample preparation for cupping. • 不新鲜、变质或氧化的风味，可以透过咖啡包装的氧气测试或是密封压力测试。 • stale, rancid, or oxidized flavors could also be supported with O₂ Testing or Seal Pressure Testing of the coffee packaging. 说明烘焙颜色分析是属于色彩光谱学的一种形式，而光谱颜色分析也适用于其他目的。 Clarify that roast color analysis is a form of color spectrometry, but forms of color spectrometry are used for other purposes.	题目编号 100011691887 下列何者为咖啡实验室中常见的分析测试？（请选择所有适用选项） <u>烘焙颜色分析</u> <u>生豆密度</u> <u>生豆湿度含量</u> 情感性感官评估 Question ID: 100011691887 Which of the following are common analytical tests performed in a coffee quality lab? (Select all that apply.) <u>Roast color analysis</u> <u>Green coffee density</u> <u>Green coffee moisture content</u> Affective sensory assessment 题目编号 100011691888 烘焙发展不足或过度发展的风味与产品规格不符时，可佐以下列何种分析测试？ <u>烘焙颜色分析</u> 生豆密度 生豆湿度含量 包装密封压力测试 Question ID: 100011691888 Which of the following analytical tests might support the presence of underdeveloped or overdeveloped flavors that differ from product specifications? <u>Roast color analysis</u> Green coffee density Green coffee moisture content Bag seal pressure testing	
--	---	--	--	--

			题目编号 100011691889 在咖啡样本中发现老化、霉味或陈旧潮湿时，可佐以下列何种分析测试？ <u>生豆水分含量</u> 氧气分析 烘焙色度分析 生豆密度 Question ID: 100011691889 Which of the following analytical tests might support the presence of faded, moldy, or musty flavors found in a coffee sample? <u>Green coffee moisture content</u> O₂ testing Roast color analysis Green coffee density

7. 附录 Appendices

附录 A：重要术语 Appendix A: Key Terminology

术语 Term	说明* Description*
酸质 Acidity	由咖啡唤起的酸味感知，在强度与特征上可能有所不同。 The perception of sour taste provoked by the brew, which may vary in intensity and character.
余韵 Aftertaste	在口中和喉咙残留的咖啡成分所引起的感知，包含味道与鼻后嗅觉。在咖啡被吐掉或吞咽之后，大脑将这些不同的感官输入结合，形成一个整体印象。 The perception coming from both the taste and the retronasal olfactory component caused by the remnants of the brew inside the mouth and throat, after the brew has been ejected or swallowed. It is perceived as a single impression, as the brain combines the different sensory inputs.
湿香 Aroma	在加入热水开始冲煮咖啡后，与破除咖啡浮渣时，进行评估的鼻前嗅觉感知（咖啡的香气）。 The orthonasal olfactory perception of the coffee brew, assessed right after brewing and while the crust is broken (the smell of the brew).
涩感 Astringent	余韵感受在口中持续的干涩感觉。 An aftertaste sensation consistent with a dry feeling in the mouth.
属性 Attribute	被视为咖啡特征或固有部分的质量或特性。用于感官评估时，属性是若干感官类别（湿香、干香、风味、余韵、酸质、甜味以及口感）中的描述词，会用于评估咖啡时进行分析以及评分。 A quality or feature regarded as a characteristic or inherent part of a coffee. For the purpose of sensory assessment, an attribute is a descriptor within a number of defined categories (aroma, fragrance, flavor, aftertaste, acidity, sweetness, and mouthfeel) of sensation that are analyzed and rated when assessing a coffee.
基本味道 Basic Tastes	甜、酸、苦、咸及鲜等五种基本味道。 The five basic tastes of sweet, sour, bitter, salty and umami.

破渣 Break	搅拌咖啡液中「咖啡浮渣」或「圆顶」（通常在萃取过程中形成于杯子顶层）的行为，为准备啜吸之前的步骤之一。 The act of stirring the “crust” or “dome” of coffee slurry usually formed on the top of the cup during brewing, as one of the steps to ready the cup for liquoring.
咖啡浮渣 Crust	萃取后立即在咖啡表层形成的一层湿咖啡粉。破除后可评估咖啡的湿香。 The layer of wet coffee grounds that forms on the top of the brew surface immediately after brewing. This crust is broken to evaluate the coffee aroma.
杯测 Cupping	一种对咖啡进行感官评估的方法，每款咖啡样本会准备数杯，每杯咖啡豆独立研磨并冲泡，然后对每杯咖啡样本品尝数次。A method for the sensory assessment of coffee, which involves tasting several cups per coffee sample, using a different set of coffee beans for each cup, which is ground and brewed independently.
杯测杯 / 碗 Cupping Glasses/ Bowls	用于杯测咖啡的玻璃或陶瓷容器，容量在 200 毫升至 350 毫升之间。 Tempered glass or ceramic vessels between 200mL and 350mL used for cupping between 200mL and 350mL.
杯测研磨 Cupping Grind	较滤纸研磨度稍粗的研磨度，约有 70% 到 75% 的咖啡粉能通过 850μm 或美国 20 号筛网。 A grind that is coarser than a paper filter grind with 70% to 75% passing through a 850μm or US Size 20 sieve.
描述性测试 Descriptive Test	描述性测试是一种量化的感官测试，旨在对产品所有感知感官属性进行描述和分析。 A descriptive test is a quantitative sensory test that seeks to profile a product on all its perceived sensory attributes.
差别测试 Difference Test	差别（区别性）是一种感官测试，用于辨别样本之间是否存在差异（或没有差异）。 A difference (discriminative) test is a sensory test that identifies whether there is a difference (or not) between samples.
对照比较测试 Difference From Control Test	一种差别测试，由品鉴者评估样本与标准或对照品的整体差异程度，并对样本评分。 A difference test in which the taster rates a sample on the overall degree of difference from a standard or control product.
二选一测试 Duo-Trio Test	一种差别测试，品鉴者会收到一个参考样本和两个已编号的样本，品鉴者必须选出与参考样本最相似者。选择正确答案的机率为 50%。 A difference test in which the taster receives one reference sample and two coded samples. The taster must choose the sample most similar to the reference. The probability of choosing a correct answer by chance is 50%.

风味 Flavor	来自咖啡的味道和咖啡在口中时的鼻后嗅觉感知。脑部将不同的感官输入结合起来，被感知为一种单一「风味」印象。 The perception coming from both the taste of the brew and the brew's retronasal olfactory component, while the brew is in the mouth. It is perceived as a single "flavor" impression, as the brain combines the different sensory inputs.
干香 Fragrance	在咖啡冲泡之前，对咖啡粉的鼻前嗅觉感知。 The orthonasal olfactory perception of the coffee grounds prior to brewing (the smell of the coffee grounds.)
味觉 Gustation	品尝味道的感知，就像「视觉」代表视力的感知，以及「嗅觉」代表气味的感知。味觉主要的生理结构是一组味蕾。 The sense of taste, just as "visual" refers to the sense of sight and "olfactory" to the sense of smell. The main physiological structure of the sense of taste is the set of tastebuds.
进 / 出测试 In/Out Test	一种差别测试，由品鉴者比较样本与已建立的标准，判断样本是否符合指定标准，又称为合格 / 不合格测试。 A difference test in which the taster compares a sample to an established standard to determine whether the sample meets or does not meet specified criteria. This is also known as a pass/fail test.
口感 Mouthfeel	当咖啡在口中时的触觉感知，不包含温度感知。口感包括：咖啡的重量感、黏稠度、质地，以及其它触觉特性，例如涩感（口腔干涩感） The tactile perception of the brew while it is in the mouth, excluding the temperature perception. It encompasses the brew's weight and viscosity, its texture, and other tactile properties such as astringency (mouth-drying property).
嗅觉 Olfactory	与气味的感知有关。人类嗅觉系统由鼻子、鼻腔，以及大脑中的「嗅球」所组成，嗅球负责处理鼻腔内覆盖的嗅觉受体的讯息。 Relating to the sense of smell. The human olfactory system consists of the nose, the nasal cavities, and the "olfactory bulb" in the brain, which processes information from the olfactory receptors lining the nasal cavities.
p 值 P-Value	当您进行统计学中的假设检验时，p 值（经计算得出的概率）有助于判断结果的显著性。通常落于 0 到 1 的范围内。 When you perform a hypothesis test in statistics, a p-value, or calculated probability, helps you determine the significance of your results. It falls within a scale of 0-1.
感官评估小组 Sensory Panel	感官小组是受过培训、校正的团体，能够客观地描述样本之间的差异性。 A sensory panel is a trained, calibrated group that can objectively describe differences between samples.

三角杯测 Triangulation Test	三角杯测是一种区别性的测试方法，品尝者必须在三个一组样本中辨别出那个不同或最明显不同的样本。 A triangulation (or triangle) test is a discriminative test method in which the taster identifies the odd/most significantly different sample in a set of three samples.
三合一 Triad	三个一组的样本，用于三角杯测。 The individual set of three samples used in a triangulation test.

*这些术语的参考数据已列入课程内容。

*References for these terms are listed within the context of the curriculum.

附录 B：活动准备指南 Appendix B: Activity Preparation Guide

活动 Activity	说明指示 Instructions								
2.02.03 五种基本味道 Five Basic Tastes	第 1 部分：AST 可选择为每一种基本味道准备溶液，这对尚未完成感官品鉴初级课程的学员来说，格外有帮助。学员将练习盲测这些溶液。 Part 1: If they choose, the AST can set up solutions for each of the five basic tastes. This is especially helpful if one or more learners did not complete Sensory Foundation. Learners practice the blind identification of these solutions. <table> <tr> <th>味道 Taste</th><th>溶液 Solution</th></tr> <tr> <td>酸（酸质） Sour (Acidic)</td><td>0.5 克的柠檬酸颗粒 + 1,000 毫升的水 0.5 g citric acid granules + 1000 mL water</td></tr> <tr> <td>甜 Sweet</td><td>10 克的蔗糖 / 白砂糖 + 1,000 毫升的水 10 g sucrose/table sugar + 1000 mL water</td></tr> <tr> <td>苦 Bitter</td><td>0.5 克的咖啡因粉* + 1,000 毫升的水 0.5 g caffeine powder* + 1000 mL water</td></tr> </table>	味道 Taste	溶液 Solution	酸（酸质） Sour (Acidic)	0.5 克的柠檬酸颗粒 + 1,000 毫升的水 0.5 g citric acid granules + 1000 mL water	甜 Sweet	10 克的蔗糖 / 白砂糖 + 1,000 毫升的水 10 g sucrose/table sugar + 1000 mL water	苦 Bitter	0.5 克的咖啡因粉* + 1,000 毫升的水 0.5 g caffeine powder* + 1000 mL water
味道 Taste	溶液 Solution								
酸（酸质） Sour (Acidic)	0.5 克的柠檬酸颗粒 + 1,000 毫升的水 0.5 g citric acid granules + 1000 mL water								
甜 Sweet	10 克的蔗糖 / 白砂糖 + 1,000 毫升的水 10 g sucrose/table sugar + 1000 mL water								
苦 Bitter	0.5 克的咖啡因粉* + 1,000 毫升的水 0.5 g caffeine powder* + 1000 mL water								

	<table><tr><td>鲜 Umami</td><td>0.6 克的味精（MSG）+ 1,000 毫升的水 0.6 g monosodium glutamate (MSG) powder + 1000 mL water</td></tr><tr><td>咸 Salty</td><td>1.6 克氯化钠（食盐）+ 1,000 毫升的水 1.6 g NaCl/table salt + 1000 mL water</td></tr><tr><td colspan="2">使用干净安全、适合饮用的过滤水。 Use clean, filtered, potable drinking water.</td></tr></table> * 请注意：在添加咖啡因时应注意（高剂量咖啡因具毒性）。尽管这些材料大多可在超市、杂货店或在线购买，AST 可能还是需要透过学校 / 实验室名义，向供货商登记以取得咖啡因。 *Note: Use caution when dosing caffeine (it is toxic in high quantities). While most of these materials can be obtained at a supermarket, grocery store, or online, the AST may need to register with a laboratory supplier as a school/laboratory to obtain caffeine. 第 2 部分：AST 依照感官品鉴中级实作测验的指示，准备并展示不同酸甜强度的溶液。学员将练习对这些溶液的强度进行评比。 Part 2: Next, ASTs prepare and present solutions of varying intensities for sourness and sweetness using the instructions for the Sensory Skills Intermediate Practical Exam. Learners practice ranking the intensities of these solutions.	鲜 Umami	0.6 克的味精（MSG）+ 1,000 毫升的水 0.6 g monosodium glutamate (MSG) powder + 1000 mL water	咸 Salty	1.6 克氯化钠（食盐）+ 1,000 毫升的水 1.6 g NaCl/table salt + 1000 mL water	使用干净安全、适合饮用的过滤水。 Use clean, filtered, potable drinking water.																									
鲜 Umami	0.6 克的味精（MSG）+ 1,000 毫升的水 0.6 g monosodium glutamate (MSG) powder + 1000 mL water																														
咸 Salty	1.6 克氯化钠（食盐）+ 1,000 毫升的水 1.6 g NaCl/table salt + 1000 mL water																														
使用干净安全、适合饮用的过滤水。 Use clean, filtered, potable drinking water.																															
2.02.04 香气辨识 Aroma Identification	学员将使用 Le Nez du Café 香瓶组或 Scentone（T100 或 T144），一次探索一种类型的香气。考验学员能否将闻香瓶的编号与正确的香气描述正确配对。着重在实作测验将使用到的香气，并确保学员将闻香瓶拿好。 Using either the Le Nez du Café aroma kit or Scentone (T100 or T144), learners explore each aroma one category at a time. Challenge them to match the vial numbers with their correct aroma descriptors. Focus on aromas which you will use in the practical exam. Ensure that learners are handling the vials properly. <table><tr><th>Le Nez du Café</th><th>Scentone T144</th><th>Scentone T100</th></tr><tr><td>#3 碗豆 Garden Pea</td><td>#111 小黄瓜 Cucumber</td><td>#91 小黄瓜 Cucumber</td></tr><tr><td>#7 丁香 Clove</td><td>#98 丁香 Clove</td><td>#79 丁香 Clove</td></tr><tr><td>#12 咖啡花 Coffee Blossom</td><td>#4 茉莉花 Jasmine</td><td>#68 茉莉花 Jasmine</td></tr><tr><td>#15 柠檬 Lemon</td><td>#23 柠檬 Lemon</td><td>#26 柠檬 Lemon</td></tr><tr><td>#16 杏桃 Apricot</td><td>#56 杏桃 Apricot</td><td>#38 杏桃 Apricot</td></tr><tr><td>#18 奶油 Butter</td><td>#92 奶油 Butter</td><td>#59 奶油 Butter</td></tr><tr><td>#26 黑巧克力 Dark Chocolate</td><td>#88 黑巧克力 Dark Chocolate</td><td>#56 黑巧克力 Dark Chocolate</td></tr><tr><td>#29 榛果 Hazelnut</td><td>#76 榛果 Hazelnut</td><td>#40 榛果 Hazelnut</td></tr><tr><td>#33 烟斗 Pipe Tobacco</td><td>#101 烟斗 Pipe Tobacco</td><td>#99 烟熏 Smoke</td></tr></table>	Le Nez du Café	Scentone T144	Scentone T100	#3 碗豆 Garden Pea	#111 小黄瓜 Cucumber	#91 小黄瓜 Cucumber	#7 丁香 Clove	#98 丁香 Clove	#79 丁香 Clove	#12 咖啡花 Coffee Blossom	#4 茉莉花 Jasmine	#68 茉莉花 Jasmine	#15 柠檬 Lemon	#23 柠檬 Lemon	#26 柠檬 Lemon	#16 杏桃 Apricot	#56 杏桃 Apricot	#38 杏桃 Apricot	#18 奶油 Butter	#92 奶油 Butter	#59 奶油 Butter	#26 黑巧克力 Dark Chocolate	#88 黑巧克力 Dark Chocolate	#56 黑巧克力 Dark Chocolate	#29 榛果 Hazelnut	#76 榛果 Hazelnut	#40 榛果 Hazelnut	#33 烟斗 Pipe Tobacco	#101 烟斗 Pipe Tobacco	#99 烟熏 Smoke

2.02.05 常见口感感知 Common Mouthfeel Sensations	根据 WCR 感官辞典中的「口感」章节，准备干涩、厚实、金属感以及油滑的参照物。本活动所需的用品也可以在 WCR 感官辞典中找到。 Prepare references for Mouth-Drying, Thickness, Metallic, and Oily according to the “Mouthfeel” section of the WCR Sensory Lexicon. Supplies for this activity can also be found in the WCR Sensory Lexicon.
2.02.07 评估咖啡的感官差异 Evaluating Sensory Differences in Coffee	准备三杯咖啡，展现出在香气、风味和口感上的差异。AST 可以使用任何咖啡（任何产地或后制处理方法、大量或手冲冲煮），只要能在香气、风味以及口感上呈现显著差异。学员以盲测方式，描述每杯咖啡的香气、风味以及口感。 Prepare three brewed coffees that demonstrate distinct differences in aroma, flavor, and mouthfeel. ASTs can use any coffees (any origin or processing method, using batch or manual brewing) as long as they display notable differences in aroma, flavor, and mouthfeel. Learners describe the aroma, flavor, and mouthfeel of each coffee in a blind tasting. 鼓励学员使用 SCA 叙述性评估表记录品评印象。鼓励学员专注于填写评估表上关于香气、风味和口感的「选择所有适合项目」（CATA），不需考虑其他属性或强度量表。 Encourage learners to document their impressions individually using the SCA Descriptive Form. Encourage learners to focus on filling out the check all that apply (CATA) lists for aroma, flavor, and mouthfeel on the form (don't worry about other attributes and intensity scales). 于品鉴完成后讨论学员成果。揭晓每杯咖啡的产地以及后制处理方法，并对照小组最终成果。 Discuss learners' results after the tasting is complete. Reveal the origin and processing method of each coffee and relate to the group results.
2.03.03 三角杯测标准规范 Triangulation Testing Protocols	将学员分为两组，每组为另一组设置一场三角杯测盲测并建立答案。协助学员练习使用两款咖啡设置六组三角杯测（每组三杯）。 Divide learners into two groups. Each group will set a blind triangulation table for the other group and create an answer key. Help learners practice setting up a triangulation table of six triads using two coffees. 咖啡应来自不同产地，但拥有相似的风味轮廓。 The coffees should be from different origins but have similar flavor profiles. 一旦杯测桌设置完毕，学员可以开始进行三角杯测，并记录结果。 Once the tables are set, learners complete the triangulation tests and note their results.
2.03.04 三角杯测统计 Triangulation Test Statistics	使用 5% 的显著水平，将活动 2.03.03 的结果应用到三角杯测的统计风险表，以判断是否存在显著差异。您可能需要视班级规模进行数据外推。 Using a significance level of 5%, apply the results from Activity 2.03.03 to the statistical risk table for triangulation tests to determine if a significant difference does or does not exist. Depending on the size of the class, you may need to extrapolate the data. °

	在选定的显著水平表格下方所列数字乃需要的正确回答数（基于评估人数而定），用于不拒绝虚无假设（即声明两种咖啡之间毫无显著差异）。 The number listed under the chosen Significance Level on the table is the number of correct responses needed, based on the number of assessors, to fail to reject the null hypothesis (to state that there is NO significant difference between the two coffees.)
2.04.04 进行 SCA 描述性评估 Performing an SCA Descriptive Assessment	建立一桌至少有六款咖啡的盲测，目的是呈现各种不同的风味和属性强度。桌上应安排来自非洲、美洲以及印度尼西亚 / 东南亚的各种咖啡。咖啡应有不同的后制处理法，避免出现任何瑕疵风味。 Set at least one blind table of six coffees that display a diversity of flavors and attribute intensities. The table should showcase a variety of coffees from Africa, the Americas, and Indonesia/Southeast Asia. Coffees should vary in processing method. Avoid defects for this activity. 如咖啡价值评估标准规范所述，AST 可使用杯测法（五杯样本组合）或批量冲泡来准备这些样本。 As outlined in the Coffee Value Assessment Protocol, the AST may use the cupping method (five-cup sample sets) OR batch brewing to prepare the samples. 如果学员没有相关经验，AST 应介绍该评估表，包括解释强度量表标准以及「选择所有适合项目」（CATA）内容。 If they have not already done so, AST should introduce the form, including explanations of the intensity scales and check all that apply (CATA) boxes. 学员将使用 SCA 描述性评估表，并为所有样本完成描述性评估。 Learners use the SCA Descriptive Form and complete descriptive assessments for all samples. 讨论结果时，应说明咖啡价值（CVA）标准规范中的嗅觉参考可以用来提高 CATA 和强度量表的表现。 When discussing results, point out that the olfactory references in the CVA Protocol can be used to increase effectiveness with the CATA boxes and intensity scales.
2.04.06 进行 SCA 情感性评估 Performing an SCA Affective Assessment	设置一桌至少包括六款咖啡的盲测，呈现各种不同的风味和属性强度。应安排来自非洲、美洲以及印度尼西亚 / 东南亚的各种咖啡。咖啡的后制处理方法也应有所不同，AST 可选择纳入一或两款有不一致及 / 或瑕疵风味的咖啡。 Set at least one blind table of six coffees that display a diversity of flavors and attribute intensities. The table should showcase a variety of coffees from Africa, the Americas, and Indonesia/Southeast Asia. Coffees should vary in processing method. If they choose, ASTs can include one or two non-uniform and/or defective cups. 如咖啡价值评估标准规范所述，AST 应使用杯测法（五杯样本组合）。AST 可邀请学员协助设置杯测。 As outlined in the Coffee Value Assessment Protocol, the AST should use the cupping method (five-cup sample sets). The AST can invite learners to assist with setting up the cupping.

	如果学员没有相关经验，AST 应介绍该评估表，包括解释喜好度量表标准，以及如何正确填写一致性与瑕疵字段。 If they have not already done so, AST should introduce the form, including explanations of the hedonic scales and how to properly fill out the uniformity and defect section. 学员使用 SCA 情感性评估表，并对所有样本进行情感性评估。 Learners use the SCA Affective Form and complete Affective Assessments for all samples. 在讨论结果时，应说明情感性评估测量属个人喜好或对质量的印象。因此，除非杯测者寻求与特定市场偏好一致，否则不需要进行校正。 When discussing results, point out that affective assessments measure individual liking or impression of quality. Therefore, calibration is not desirable unless the cupper seeks to align with a specific market preference.
2.08.02A 进 / 出测试 In/Out Test	设置两张杯测桌，品尝每桌的编码咖啡与控制组咖啡。 Set two tables. Each table tests coded coffees against a control coffee. 选择一款咖啡（任何产地、后制处理法），准备四种不同烘焙程度的咖啡样本：控制烘焙、较控制组浅焙、较控制组深焙，和有焙烤味的咖啡。 Select one coffee (any origin, processing method) to use in this activity. Prepare four samples by roasting the coffee differently – one control roast, one lighter than control, one darker than control, and one baked. 杯测桌 1 Set 1: - 某咖啡：烘焙度 Agtron 值较控制组咖啡浅 3-5 One coffee 3-5 Agtron lighter than the control - 某咖啡：烘焙度 Agtron 值较控制组咖啡深 7-10 One coffee 7-10 Agtron darker than the control - 控制组 Control 杯测桌 2 Set 2: - 某咖啡：烘焙度 Agtron 值较控制组咖啡浅 3-5 One coffee 3-5 Agtron lighter than the control - 某咖啡：烘焙度 Agtron 值较控制组咖啡深 7-10 One coffee 7-10 Agtron darker than the control - 某咖啡：有焙烤味 One coffee that is baked - 控制组 Control

	学员应：Learners should: 1. 建立评估量表 (是 / 否、四种方框、线性比例 ... 等) Create a scale (yes/no, four boxes, linear scale, ...) 2. 同意可接受性的限制。 Agree on limits of acceptability. 3. 训练 (各自评估杯测桌 1，并使用该结果进行校正)。 Train (evaluate Set 1 individually and then calibrate using the results). 4. 测验 (各自评估杯测桌 2，分析结果，评估样本合格或失败，是否符合规格)。 Test (Evaluate Set 2 individually, analyze results, assess whether samples pass or fail or are in/out of specification). 讨论校正目的的结果。 Discuss results for calibration purposes. 讨论量表的有效性、限制、改善的机会等。 Discuss the effectiveness of the scales, limits, opportunities for improvement, etc.
2.08.02B 进 / 出测试 vs 三角杯测 In/Out Test vs Triangulation Testing	根据前一项活动，找出与控制组咖啡差异最小的烘焙方式。 From the previous activity, identify the roast with the smallest difference when compared to the control. 建立六组咖啡 (每组三杯)，比较该烘焙与控制组。 Set up six triads comparing that roast against the control. 收集结果，并判断是否存在显著差异。 Collect results and determine if a significant difference exists. 询问学员该结果是否与先前的进 / 出测试的合格 / 不合格结果一致。 Ask learners if this result lines up with the pass/fail result of the previous in/out test. 讨论这两种方法的优缺点。 Discuss the pros and cons of the two methods.
