致谢 :

过去十多年来，无数咖啡专业人士以及优秀教育工作者贡献了宝贵的时间与专业知识，致力推动精品咖啡协会 (SCA) 认证教育计划。以下专业人士贡献并验证此感官品鉴课程教材 2.0 版的教材：Ian Picco、Edouard Thomas、Brandon Bir、Drew Billups 以及 Gloria Pedrosa。

Acknowledgements:

For more than a decade, countless coffee professionals and gifted educators have contributed their time and expertise to the evolution of the Specialty Coffee Association's certificate education programs. The following professionals contributed to and validated Version 2.0 of course materials for Sensory Skills: Ian Picco, Edouard Thomas, Brandon Bir, Drew Billups, and Gloria Pedrosa.

我们也要感谢担任 AST 高级读者并为此 3.0 版本提供反馈意见的专业人士：Cadence Sim、Joost Leopold 以及 Ludovic Maillard。

We would also like to thank the professionals who served as AST advance readers and provided feedback on Version 3.0: Cadence Sim, Joost Leopold, and Ludovic Maillard.

请注意：本课程指南取代了先前的课程文件，仅供已获得感官品鉴认证的培训师使用，请勿将此文件分享给其他的 AST 讲师或学员。

Note: This guidebook replaces previous curriculum documents. This guidebook is only available to authorized trainers licensed in Sensory Skills. Please do not share this document with other ASTs or learners.

1. 一般信息 General Information

课程信息 Course Information

课程长度：最少 21 小时 Course Length: Minimum 21 hours

可透过以下方式满足最低课程时数：Minimum course hours are met through time spent in the following ways:

- AST 面对面现场授课或透过远距教学。The AST delivering live instruction in-person or through distance learning.
- AST 进行非正式与正式评估。（请注意：这包含学员进行在线笔试的时间。）The AST conducting informal and formal assessments. (Note: This does not include time spent by the learner taking the online written exam.)
- 学员参与可认识及 / 或加强理论或实作课程目标的活动。The learner engaging in activities that introduce and/or reinforce the theoretical or practical course objectives.

先修条件：感官品鉴中级课程 Prerequisites: Sensory Skills Intermediate

强烈建议先修课程：烘焙中级与生豆中级课程 Roasting Intermediate and Green Coffee Intermediate highly recommended

笔试信息 Written Exam Information

在线笔试总题数：40 题（每题一分）

Total Number of Questions on Online Written Exam: 40 (worth one point each)

在线笔试时间总长：42 分钟

Total Time Allowed for Online Written Exam: 42 minutes

及格分数（在线笔试）：80%

Passing Score (Online Written Exam): 80%

实作测验信息 Practical Exam Information

实作测验时间总长：140 分钟

Total Time Allowed for Practical Exam: 140 minutes

及格分数：80% = 答对 56 分 / 总测验分数 70 分

Passing Score: 80% = 56 points correct / 70 total exam points

2. 课程说明与更新 Course Description and Updates

说明 Description

感官品鉴专业级课程以中级课程所介绍的概念和技能为基础，旨在协助学员于从事咖啡和相关产品的感官评估时善尽管理职能。在本交互式课程中，学员除可增进自身对咖啡业界标准与感官科学最佳实务的认识外，还能探索咖啡业进行感官评估的情况、鉴别及评估精品咖啡生豆的质量，并示范如何精确测量及描述咖啡饮品的特点。参与者将学习如何生成可重复且系统性的咖啡感官测量数据，并解读相关结果。课程结束后将透过笔试测验学员的专业课程知识，并根据课程期间进行的各项实作活动，以实作方式测验上述技能。

The Sensory Skills Professional course builds on the concepts and skills introduced in the Sensory Skills Intermediate course and prepares the learner for managerial job functions in the sensory assessment of coffee and related products. In this interactive course, learners gain alignment with coffee industry standards and sensory science best practices, explore the implementation of sensory assessment in a coffee business, identify and evaluate qualities in specialty green coffee, and demonstrate how to accurately measure and describe coffee beverage characteristics. Participants will learn how to generate repeatable and methodical sensory measurements of coffee, along with interpretation of those results. A written exam tests professional course knowledge while a practical exam tests the skills described above based on different working activities carried out during the course.

旧版课程更新 Curriculum Updates from Previous Version

旧版课程指南为 2.0 版，本课程指南为 3.0 版。

The previous Guidebook is referred to as Version 2.0. This Guidebook is referred to as Version 3.0.

在 3.0 版中，目标、内容、活动均已依咖啡价值评估（CVA）的标准与工具予以调整。尽管整体目标维持不变，本课程如今纳入了更多感官科学的重要概念，并透过 CVA 标准以及 SCA 描述性和情感性评估表帮助学习。部分章节已重新排序或改写，以充分诠释并易于理解，给予 AST 的注释也已扩充。

In Version 3.0, the objectives, content, and activities have been adjusted to reflect Coffee Value Assessment protocols and tools. While the overarching goals of the module remain the same, the course now includes the CVA Protocol and the SCA Descriptive and Affective Forms, as well as more key concepts from sensory science. Some sections have been reordered or reworded to improve clarity. AST Notes have been expanded.

更新后的课程教材以及实作测验试卷，请至 AST Portal > My AST Downloads 下载。

Curricula and exam updates are available in the AST Portal under My Downloads.

3. 笔试题目分布（按主题） Written Exam Question Distribution by Topic

有关在线测验试题的重要信息详如下表。The chart below outlines key information regarding the online exam questions.

题库： 每个主题会用于学员在线测验的试题数量。 Question Pool: This is the number of questions per topic that are available to present to the learner during the online exam.

考题数量： 每个主题实际列入在线考试（随机选出）的试题数量。该数量由课程建立者决定，目的是确保各章节和主题所占的比例获适当分配。
Number of Questions Presented: This is the number of questions a learner will randomly receive per topic during the online exam. This number was determined by the course authors to ensure that each section and topic of the course is weighted appropriately.

章节比重：每个章节名称右侧，列有该章节在整份测验中的占比。

Section Weighting: Next to each section title is the percentage of the total exam represented by the questions in that section.

部分主题 / 目标不会列入笔试中，由于这些信息将在未来课程中派上用场，讲师仍应讲授相关内容。

There are some topics/objectives that are not tested during the written or practical exam. The trainer should still address these topics/objectives as the information will be useful in future courses.

考试章节与主题 Exam Sections & Topics	题库 Question Pool	考题 Questions Presented
3.01 章节 感官评估概述 约 4% Section SENSORY ASSESSMENT OVERVIEW About 4%		
主题 1：感官评估复习 1 Topic: Sensory Assessment Review	4	1
主题 2：复习咖啡产业中的感官评估 2 Topic: Sensory Assessment in the Coffee Industry Review	仅供教学，未列入施测内容。 Taught, not tested.	
3.02 章节 生理学与感官属性 约 15% Section PHYSIOLOGY AND SENSORY ATTRIBUTES About 15%		
主题 1：感官感知链 1 Topic: Chain of Sensory Perception	3	1
主题 2：感觉与感知 2 Topic: Sensation and Perception	3	1
主题 3：刺激交互作用对于感知的影响 3 Topic: Impact of Stimuli Interactions on Perception	4	1

主题 4：阈值与敏感度 4 Topic: Thresholds and Sensitivity	3	1
主题 5：四种阈值类型 5 Topic: Four Types of Thresholds	4	1
3.03 章节 偏见与错误 约 16% Section BIAS AND ERROR About 16%		
主题 1：基于心理的偏见 1 Topic: Psychologically Based Biases	11	5
	活动 Activity	
主题 2：性格与态度的影响 2 Topic: Influence of Personality and Attitude	4	1
主题 3：感官评估中的偏见缓解 3 Topic: Mitigation of Bias in Sensory Assessment	3	1
3.04 章节 咖啡品鉴者的风味轮与 WCR 辞典 约 7% Section COFFEE TASTER’S FLAVOR WHEEL AND WCR LEXICON About 7%		
主题 1：WCR 辞典与风味轮分类学 1 Topic: WCR Lexicon and Flavor Wheel Taxonomy	4	1
主题 2：WCR 辞典与咖啡品鉴者的风味轮开发 2 Topic: Development of the WCR Lexicon and Coffee Taster’s Flavor Wheel	4	1
主题 3：应用 WCR 辞典与风味轮 3 Topic: Applying the WCR Lexicon and the Flavor Wheel	活动 / 实作测验 Activity/Practical Exam	
3.05 章节 咖啡中的味觉属性 0% Section GUSTATORY ATTRIBUTES IN COFFEE 0%		
主题 1：酸质与苦味的强度评比 1 Topic: Ranking Acidity and Bitterness Intensity	活动 / 实作测验 Activity/Practical Exam	
主题 2：甜度评比 2 Topic: Ranking Sweetness Intensity	活动 / 实作测验 Activity/Practical Exam	
主题 3：咖啡的应用 3 Topic: Applied to Coffee	活动 / 实作测验 Activity/Practical Exam	
3.06 章节 咖啡中的口感 约 3% Section MOUTHFEEL IN COFFEE About 3%		
主题 1：口感 1 Topic: Mouthfeel	3	1
	活动 Activity	
3.07 章节 评估咖啡中的属性 5% Section ASSESSING ATTRIBUTES IN COFFEE About 5%		
主题 1：属性的感知 1 Topic: Perceptions of Attributes	活动 Activity	
主题 2：SCA 情感性评估 2 Topic: SCA Affective Assessment	活动 Activity	
主题 3：瑕疵、走味与烘焙问题 3 Topic: Defects, Staling, and Roasting Problems	6	3

	活动 / 实作测验 Activity/Practical Exam	
3.08 章节 感官描述性剖析 约 8% Section SENSORY DESCRIPTIVE PROFILING About 8%		
主题 1：感官描述性剖析基础 1 Topic: Sensory Descriptive Profiling Basics	5	2
	活动 Activity	
主题 2：感官描述性方法 2 Topic: Sensory Descriptive Methods	4	1
主题 3：分析数据与诠释结果 3 Topic: Analyzing Data and Interpreting Results	仅供教学，未列入施测内容。 Taught, not tested.	
3.09 章节 杯测与 SCA 标准 约 12% Section CUPPING AND SCA PROTOCOL About 12%		
主题 1：杯测法复习 1 Topic: Cupping Methodology Review	10	5
主题 2：杯测处理的考虑 2 Topic: Processing Considerations with Cupping	3	1
主题 3：SCA 描述性评估 3 Topic: SCA Descriptive Assessment	活动 / 实作测验 Activity/Practical Exam	
3.10 章节 感官评估小组与校正应用 约 16% Section SENSORY PANELS AND CALIBRATION APPLIED About 16%		
主题 1：在业务中建立一个感官评估小组 1 Topic: Setting Up a Sensory Panel in a Business	4	1
主题 2：准备培训课程 2 Topic: Preparing a Training Program	4	1
主题 3：感官评估小组成效检验与校正 3 Topic: Sensory Panel Performance Check and Calibration	5	2
主题 4：评估小组成员的健康与福祉 4 Topic: Health and Welfare of Panel Members	5	2
3.11 章节 应用 – 有效期, 消费者测试，以及新产品开发 约 13% Section APPLICATION – SHELF LIFE, CONSUMER TESTING, AND NEW PRODUCT DEVELOPMENT About 13%		
主题 1：判断有效期 1 Topic: Determining Shelf Life	5	2
主题 2：消费者测试 2 Topic: Consumer Testing	4	1
	活动 Activity	
主题 3：新产品开发 3 Topic: New Product Development	5	2
主题 4：感官测试设计的计划 4 Topic: Plan for Sensory Testing Design	活动 Activity	
总题数 Total Number of Questions	110	40

4. 课程大纲与相关在线笔试考题 Course Curriculum with Corresponding Online Written Exam Questions

课程大纲兹列如下，分为章节、主题与目标。

The course curriculum is outlined below and is divided into Sections, Topics, and Objectives.

所有在线笔试题目均为评测学员是否达成特定目标所拟定。这些题目一律按主题分类，并组成所谓的「题库」，学员受测内容为随机选自题库之中。

由于测验采随机抽题方式，因此当某个主题的目标不只一项时，可能不会悉数列入学员受测内容。

All online written exam questions were developed as an assessment for a specific objective. These questions have been grouped according to topic. All questions within a topic are considered the topic “pool.” From this pool, a certain number of questions will be randomly selected and presented to the learner. If a particular topic has more than one objective, it is possible that the learner will not be tested on all objectives in the topic. This is due to the randomization of the questions from that topic.

3.01 | 章节 | 感官评估概述

2 个主题

| Section | SENSORY ASSESSMENT OVERVIEW

2 Topics

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
3.01.01 感官评估复习 Sensory Assessment Review	1.回顾并描述感官评估的四个阶段 Recall and describe the four stages of sensory assessment	请参考中级课程指南相对应的章节（主题 2.01.01 与 2.01.02），协助学员回顾这些核心概念。如情况允许，可提供更多内容与实务案例。 Refer to corresponding	题目编号 100011694881 请依正确顺序排列感官评估的四个阶段。 诠释 唤起 评估 测量 <u>唤起、测量、评估、诠释</u>	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 16-22, 70-91.

	2.回顾并区别三种感官测试法 Recall and differentiate between the three sensory test methods	<i>Intermediate guidebook sections (Topics 2.01.01 and 2.01.02) to refresh learners on these core concepts. Provide more context and practical examples where possible.</i>	Question ID: 100011694881 Place the four stages of sensory assessment in the correct order. Interpret Provoke Evaluate Measure <u>Provoke, Measure, Evaluate, Interpret</u> 题目编号 100011694882 某家即饮冷萃咖啡业者希望为旗下最新产品进行风味描述。该公司进行评估时，应采用下列何种感官测试法？ <u>描述性</u> 情感性 区别性 决定性 Question ID: 100011694882 A ready-to-drink cold brew coffee company wants to develop flavor notes for their latest product. Which of the following sensory test methods should the company use for this assessment? <u>Descriptive</u> Affective Difference Conclusive 题目编号 100011694883 某家制造商想要评估若让大量咖啡多发酵一小时，咖啡的感官风味是否会否出现显著差异。该制造商进行评估时，应采用下列何种感官测试法？ <u>区别性</u> 情感性 描述性 决定性	
--	--	--	---	--

			Question ID: 100011694883 A producer wants to assess whether fermenting a lot of coffee for an extra hour makes a perceptible difference in the coffee's sensory profile. Which of the following sensory test methods should the producer use for this assessment? <u>Difference</u> Affective Descriptive Conclusive	
			题目编号 100011694884 某咖啡店经理想要评估消费者是否喜欢招牌饮品的新配方。该咖啡店经理进行评估时，应采用下列何种感官测试法？ <u>情感性</u> 描述性 区别性 适应性 Question ID: 100011694884 A café manager wants to assess whether customers like a new signature beverage recipe. Which of the following sensory test methods should the café manager use for this assessment? <u>Affective</u> Descriptive Difference Adaptive	
3.01.02 复习咖啡产业中的感官评估 Sensory Assessment in the Coffee	1.回顾为何感官评估对于有效评估咖啡有其必要 Recall why sensory assessment is	请参考中级课程指南中相对应的章节（主题 2.01.03），协助学员回顾这些核心概念。如情况允	仅供教学，未列入施测内容。 Taught, not tested.	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association,

Industry Review	necessary to effectively evaluate coffee 2.回顾咖啡专业人士使用风味评估做为决策工具的情形 Recall situations in which coffee professionals use flavor assessment as a decision-making tool 3.定义质量管理 Define quality control 4.回顾杯测如何与感官科学产生连结 Recall how cupping relates to sensory science	许，可提供更多内容。 <i>Refer to corresponding Intermediate guidebook sections (Topic 2.01.03) to refresh learners on these core concepts. Provide more context where possible.</i> 杯测是对咖啡进行感官评估的方法。 Cupping is a method for the sensory assessment of coffee.		September 2021), 16-22, 70-91. Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 20-22, 98-100. Britta Folmer, ed., <i>The Craft and Science of Coffee</i>, (San Diego: Elsevier Inc. as Academic Press, 2017), 419.
------------------------	--	--	--	--

3.02 | 章节 | 生理学与感官属性

5 个主题

| Section | PHYSIOLOGY AND SENSORY ATTRIBUTES

5 Topics

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
3.02.01 感官感知链 Chain of Sensory Perception	1.描述感受器与神经的基本功能 Describe the basic function of receptors and nerves 2.将各种感觉与相对应的感受器与神经进行配对 Match each sensation with the corresponding receptors and nerves	感受器察觉到感官信息后，会将其转换为电讯号，再由神经将此讯号传导至大脑。 Receptors detect sensory information and convert it into an electrical signal. Nerves carry this signal to the brain. 感觉接受器（又称「感受器」）： Receptors: - 鼻腔内的嗅上皮用于嗅觉 The olfactory epithelium in the nasal cavity is used in olfaction. - 软颚上的味蕾用于味觉 The taste buds on the soft palate are used in gustation. - 口腔肌肉上的触觉感受器用于触觉感知 The tactile receptors on muscles in the mouth are used for tactile sensation.	题目编号 100011694888 下列叙述是否正确？三叉神经负责传达感觉感知。 <u>正确</u> 错误 Question ID: 100011694888 Is the following statement true or false? The trigeminal nerve conveys somatosensory sensations. <u>True</u> False	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 16-22, 70-91. Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 23-24, 38-55. Britta Folmer, ed., <i>The Craft and Science of Coffee</i> , (San Diego: Elsevier Inc. as Academic Press, 2017), 422 – 423 Morten Meilgaard, Gail Vance Cville, and B. Thomas Carr, <i>Sensory</i>
			题目编号 100011694889 下列关于饮食的例子中，何者涉及三叉神经？（请选择所有适用选项） <u>辣的辛热感</u> <u>薄荷的凉感</u> <u>苏打水的二氧化碳气泡</u> <u>热茶的温度</u> Question ID: 100011694889 Which of the following are examples of sensations in food and beverage that involve the trigeminal nerve? (Select all that apply.) <u>Spicy heat of a chili</u> <u>Coolness of menthol</u> <u>CO₂ bubbles in soda</u> <u>Temperature of hot tea</u>	

		神经 Nerves: - 三叉神经负责传达感觉感知（温度、涩感、口感） The trigeminal nerve conveys somatosensory sensations (temperature, astringency, mouthfeel). - 颜面神经（第七对脑神经）以及舌咽神经（第九对）负责传达味觉感知 The facial nerve (cranial nerve VII) and the glossopharyngeal (IX) nerve convey taste sensations.	题目编号 100011694890 下列叙述是否正确？神经察觉到感官信息后，会将其转换为电讯号。 正确 错误 Question ID: 100011694890 Is the following statement true or false? Nerves detect sensory information and convert it into an electrical signal. True False	<i>Evaluation Techniques, 4th Edition</i> (Boca Raton: CRC Press LLC., 2006), 19.
3.02.02 感觉与感知 Sensation and Perception	1. 辨别感觉与感知 Distinguish between sensation and perception	刺激（或感觉），是由感觉器官识别，然后由感觉器官发送神经讯号到大脑。接着大脑根据先前的经验、情境及意向，对来自感觉的讯号进行解释、组织与整合，形成感知。 The stimulus, or sensation, is recognized by the sensory organ and a nerve signal from the sensory organ is sent to the brain. The brain then interprets, organizes, and integrates the incoming sensation signal into perceptions, based on previous experience, context, and intention.	题目编号 100011694894 下列何者最适合填入以下句子？感觉涉及 _____ 的刺激。 认知 诠释 组织 整合 Question ID: 100011694894 Which of the following BEST completes this sentence? Sensation involves the _____ of stimuli. Recognition Interpretation Organization Integration	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 22.

			题目编号 100011694895 下列哪些关于感知的叙述正确？（请选择所有适用选项） <u>大脑将感觉讯号进行解释、组织与整合成为感知。</u> <u>感知会受到先前的经验、情境及意向影响。</u> <u>感知发生在感觉器官认知到刺激之后。</u> 感知发生在感觉器官认知到刺激之前。 Question ID: 100011694895 Which of the following statements are true about perception? (Select all that apply.) <u>The brain interprets, organizes, and integrates sensation signals into perceptions.</u> <u>Perception can be influenced by previous experience, context, and intention.</u> <u>Perception occurs after the stimulus is recognized by the sensory organs.</u> Perception occurs <i>before</i> the stimulus is recognized by the sensory organs.	
			题目编号 100011694896 下列叙述是否正确？感觉通常发生在感知之前。 <u>正确</u> 错误 Question ID: 100011694896 Is the following statement true or false? Sensation occurs before perception. <u>True</u> False	

3.02.03 刺激交互作用 对于感知的影响 Impact of Stimuli Interactions on Perception	1.阐述刺激之间的交互作用对感知的影响。 State the impact that interactions between stimuli can have on perception	刺激之间可感知的交互作用可以调整感知。例如，相较于带有罗勒风味的糖液，在带有香草风味的糖液里可以感知到更多甜度。 Perceptible interactions between stimuli can modify perception. For example, there can be an increased perception of sweetness in a sugar solution with the flavor of vanillin as compared to the same sugar solution with the flavor of basil. 当两种或更多的味道同时存在时，可能有遮蔽或抑制各种单独味道感知的效果。适应可能会造成品鉴者无法识别出这两种受到抑制的本质味道。	题目编号 100011694902 品鉴者正在比较两种样本。样本 762 是一杯有焦糖风味的糖液。样本 435 是一杯有植物风味、浓度相同的糖液。在样本 762 中会感知到更高层次的哪种味道？ <u>甜</u> 酸 咸 苦 Question ID: 100011694902 A taster is comparing two samples. Sample 762 is a sugar solution with a caramel flavor. Sample 435 is a sugar solution of the same concentration with a vegetative flavor. Sample 762 may have a higher perceived level of which taste? <u>Sweet</u> Sour Salty Bitter	Harry T. Lawless and Hildegarde Heymann, <i>Sensory Evaluation of Food - Principles and Practices, Second Edition</i>, (New York: Springer Science & Business Media, LLC., 2010), 31. Britta Folmer, ed., <i>The Craft and Science of Coffee</i>, (San Diego: Elsevier Inc. as Academic Press, 2017), 424.
--	---	--	---	--

		When two or more tastes are present, they can have a masking or suppressive effect on the perception of each individual taste. Adaptation might cause a taster to fail to recognize the suppressive nature of the two tastes. 这种形式的遮蔽与抑制也有例外，例如：加入另一种味道可以助长加强或产生加乘作用，这些又被称为超加乘效应。 There are exceptions to this pattern of suppression and inhibition where the introduction of an additional taste can encourage enhancement or synergism. These are also called hyperadditive effects.	题目编号 100011694903 将苦味与甜味加入同一杯水溶液中，比起只有甜味且浓度相同的溶液，加入这两种味道的溶液如何被感知？ <u>该溶液尝起来较不甜也较不苦</u> 该溶液尝起来较甜 该溶液尝起来较苦 该溶液尝起来较甜也较苦 Question ID: 100011694903 The tastes of bitter and sweet are both present in the same water solution. How might these two tastes each be perceived as compared to the sweet being tasted alone at the same concentration? <u>The solution would taste both less sweet and less bitter.</u> The solution would taste sweeter. The solution would taste more bitter. The solution would taste both sweeter and more bitter. 题目编号 100011694904 当一种味道的强度透过另一种味道的引入而增加时，下列何者适合形容这种情况？ <u>超加乘效应</u> 抑制效应 适应错误 月晕效应 Question ID: 100011694904 Which term BEST describes situations when the intensity of one taste is increased by the introduction of another taste? <u>Hyperadditive effects</u> Suppressive effects Adaptation error Halo effect	
--	--	---	---	--

			题目编号 100011694905 下列叙述是否正确？当两种或更多的味道同时存在时，它们会对彼此产生抑制效应。 <u>正确</u> 错误 Question ID: 100011694905 Is the following statement true or false? When two or more tastes are present, they can have a suppressive effect on one another. <u>True</u> False	
3.02.04 阈值与敏感度 Thresholds and Sensitivity	1.定义阈值在感官感知中的意义 Define the meaning of a threshold in sensory perception	阈值是一种感觉接受器敏感度的测量方法。品鉴者对某种感觉有较低的阈值，意味着他们对该感觉的敏感度较高。 A threshold is a measurement of the sensitivity of the sensory receptors. A taster with a low threshold for a certain sensation means they have a high sensitivity to that sensation. 心理测量曲线：察觉、认知、强度的增加、饱和以及疼痛。 Psychometric curve: detection,	题目编号 100011694909 下列何者最适合填入以下句子？阈值是一种测量感觉接受器_____的方法。 <u>敏感度</u> 大小 人口数 浓度 Question ID: 100011694909 Which of the following BEST completes this sentence? A threshold is a measurement of the _____ of the sensory receptors. <u>sensitivity</u> magnitude population concentration	Morten Meilgaard, Gail Vance Civille, and B. Thomas Carr, <i>Sensory Evaluation Techniques, 4th Edition</i> (Boca Raton: CRC Press LLC., 2006).

		recognition, increases of intensity, saturation, and pain. 测试一个人对于味觉与嗅觉的敏感度，可以了解受测者辨别特定味道的能力，或其能够察觉到的最低程度。 A person's sensitivity to taste and smell can be tested either for ability to identify certain tastes or for the lowest level the person is able to detect.	题目编号 100011694910 下列叙述是否正确？品鉴者对某种感觉有较低的阈值，意味着他们对该感觉有较高的敏感度。 <u>正确</u> 错误 Question ID: 100011694910 Is the following statement true or false? A taster with a low threshold for a certain sensation means they have a high sensitivity to that sensation. <u>True</u> False	
			题目编号 100011694911 下列叙述是否正确？品鉴者对特定感觉有较高的阈值，意味着他们对该感觉有较高的敏感度。 正确 <u>错误</u> Question ID: 100011694911 Is the following statement true or false? A taster with a high threshold for a certain sensation means they have a high sensitivity to that sensation. True <u>False</u>	

3.02.05 四种阈值类型 Four Types of Thresholds	1.列出并定义感官阈值的四种类型 List and define the four types of sensory thresholds	感官阈值的四种类型为： The four types of sensory thresholds are: 1.察觉阈值：感官刺激可被感知的最低强度。 Detection: Lowest concentration of a sensory stimulus needed to be perceivable. 2.认知阈值：允许一个人识别感官刺激的最低强度，通常略高于察觉阈值。 Recognition: Minimum level of a sensory stimulus permitting identification of the sensation perceived. These are often a bit higher than detection thresholds. 3.差异阈值：一个人能够感觉到的最小物理变化。 Difference: The minimum physical change necessary for a person to sense the change. 4.终端阈值：感官反应已到达饱和的程度，无法更进一步刺激感受器或神经，因为它们已达到最大的反应程度。 Terminal: The level at which the sensory response has reached saturation, beyond which no further stimulation is possible due to maximal responding of receptors or nerves.	题目编号 100011694916 下列何者最适合定义「察觉阈值」？ <u>一个人可感知的感官刺激最低强度</u> 一个人可识别某种感觉的感官刺激最低强度 一个人能够感觉到的最小物理变化 感官反应已到达饱和的程度，无法更进一步刺激感受器或神经。 Question ID: 100011694916 Which of the following statements BEST defines ‘detection threshold’? <u>The lowest concentration of a sensory stimulus needed to be perceivable</u> The minimum level of a sensory stimulus permitting identification of the sensation perceived The minimum physical change necessary for a person to sense the change The level at which the sensory response has reached saturation and no further stimulation is possible 题目编号 100011694917 下列何者最适合定义「认知阈值」？ <u>一个人可识别某种感觉的感官刺激最低强度</u> 一个人可感知的感官刺激最低强度 一个人能够感觉到的最小物理变化 感官反应已到达饱和的程度，无法更进一步刺激感受器或神经。 Question ID: 100011694917 Which of the following statements BEST defines ‘recognition threshold’? <u>The minimum level of a sensory stimulus permitting identification of the sensation perceived</u> The lowest concentration of a sensory stimulus needed to be perceivable The minimum physical change necessary for a person to sense the change The level at which the sensory response has reached saturation and no further stimulation is possible	Harry T. Lawless and Hildegarde Heymann, <i>Sensory Evaluation of Food - Principles and Practices, Second Edition</i>, (New York: Springer Science & Business Media, LLC., 2010), 127-128. Morten Meilgaard, Gail Vance Civille, and B. Thomas Carr, <i>Sensory Evaluation Techniques, 4th Edition</i> (Boca Raton: CRC Press LLC., 2006).
---	--	---	---	--

			题目编号 100011694918 下列何者最适合定义「差异阈值」？ <u>一个人能够感觉到的最小物理变化</u> 一个人可识别某种感觉的感官刺激最低强度 一个人可感知的感官刺激最低强度 感官反应已到达饱和的程度，无法更进一步刺激感受器或神经。 Question ID: 100011694918 Which of the following statements BEST defines ‘difference threshold’? <u>The minimum physical change necessary for a person to sense the change</u> The lowest concentration of a sensory stimulus needed to be perceivable The minimum level of a sensory stimulus permitting identification of the sensation perceived The level at which the sensory response has reached saturation and no further stimulation is possible	
			题目编号 100011694919 下列何者最适合定义「终端阈值」？ <u>感官反应已到达饱和的程度，无法更进一步刺激感受器或神经。</u> 一个人可识别某种感觉的感官刺激最低强度 一个人能够感觉到的最小物理变化 一个人可感知的感官刺激最低强度 Question ID: 100011694919 Which of the following statements BEST defines ‘terminal threshold’? <u>The level at which the sensory response has reached saturation and no further stimulation is possible</u> The lowest concentration of a sensory stimulus needed to be perceivable The minimum physical change necessary for a person to sense the change The minimum level of a sensory stimulus permitting identification of the sensation perceived	

3.03 | 章节 | 偏见与错误

3 个主题

| Section | BIAS AND ERROR

3 Topics

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
3.03.01 基于心理的偏见 Psychologically Based Biases	1.认识偏见与错误会导致品鉴或杯测无效。 Recognize that bias and error can invalidate tasting or cupping exercises 2.识别偏见与错误的三类原因 Identify three categories of causes of bias and error 3.列出并定义导致感官评估出现偏见的常见心理因素 List and define	造成偏见与错误的三类原因包括：生理因素、神经因素与心理因素。 Three categories of causes of bias and error include physiological factors, neurological factors, and psychological factors. 生理因素包含由于生理状况的改变（例如感冒或季节性过敏），以及感官疲劳所导致的感知变化。 Physiological factors include changes in perception due to physical condition (e.g., a cold or seasonal allergy) and sensory fatigue.	题目编号 100011694931 某公司负责人参与咖啡生产的质量管理分析，在品尝某些样本时发出失望的声音。在这种情况下，可能会发生何种心理因素而导致错误？ <u>影响</u> 适应 习惯化 偏袒宽容 Question ID: 100011694931 The owner of a company joins in on a quality control analysis of production coffees and makes sounds of disappointment when tasting certain samples. Which of the following psychological factors might cause an error in this situation? <u>Influence</u> Adaptation Habituation Leniency	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 28-33. Carpenter, Roland P., David H. Lyon and Terry A. Hadsell. <i>Guidelines for Sensory Analysis in Food Product Development and Quality Control</i>, 32-34

	common psychological factors that can create a biased sensory assessment	神经因素包含环境效应以及跨感官交互作用。 Neurological factors include the context effect and crossmodal interaction. 心理因素包含预期效应、月晕效应、排序效应，以及影响 / 社交偏见。 Psychological factors include expectation bias, halo effect, order bias, and influence/social biases. 请参阅附录 C 的心理偏见错误。 <i>Review psychological bias errors in Appendix C.</i>	题目编号 100011694932 品鉴者使用情感性杯测评估表时，将酸质评为高分后，觉得也应给予口感高分。在这种情况下，可能发生了何种心理因素？ <u>月晕效应</u> 预期效应 排序效应 偏袒宽容 Question ID: 100011694932 When using an affective cupping form, a taster scores acidity high and feels they should also give mouthfeel a high score. Which of the following psychological factors may be occurring in this situation? <u>Halo Effect</u> Expectation Order Effect Leniency 题目编号 100011694933 在进行肯尼亚咖啡的品鉴评估时，所有的样本都被认为具有高度酸质。在这种情况下，可能发生了何种心理因素？ <u>预期效应</u> 月晕效应 排序效应 偏袒宽容 Question ID: 100011694933 Because a taster is cupping Kenyan coffees, all samples will have a high perceived acidity. Which of the following psychological factors may be occurring in this situation? <u>Expectation</u> Halo Effect Order Effect Leniency	
--	---	--	--	--

			题目编号 100011694934 品管经理总是将混合豆置于杯测桌左侧，而将单品豆置于杯测桌子右侧。在这种情况下，可能会发生何种心理因素而导致错误？ <u>排序效应</u> 适应 月晕效应 偏袒宽容 Question ID: 100011694934 On a cupping table, the quality control manager always places blends on the left side of the table and single origin coffees on the right side of the table. Which of the following psychological factors might cause an error in this situation? <u>Order Effect</u> Adaptation Halo Effect Leniency	
			题目编号 100011694935 品鉴者正在评估购买一批个人强烈支持的生产者的咖啡，这些生产者当地农场员工开设学校，故品鉴者对这些咖啡的喜好分数高于其它具有相似特点的咖啡。在这种情况下，可能发生了何种心理因素？ <u>偏袒宽容</u> 预期效应 月晕效应 适应 Question ID: 100011694935 A taster is evaluating a coffee for purchase from a group of producers that they strongly support. The producers also operate a school for local farm workers. The taster's favorable scores are higher than other coffees exhibiting similar characteristics. Which of the following psychological factors may be occurring in this situation? <u>Leniency</u> Expectation Halo Effect Adaptation	

			题目编号 100011694936 一位品鉴者在连续三年几乎专注于杯测日晒处理法的咖啡后，对于目前咖啡样本内水果风味的感知，明显低于其他受过训练的品鉴者。在这种情况下，可能发生了何种心理因素？ <u>习惯化</u> 预期效应 月晕效应 偏袒宽容 Question ID: 100011694936 After three years of cupping almost exclusively natural processed coffees, a taster's perception of fruity flavors in current coffee samples is much lower than other trained tasters. Which of the following psychological factors may be occurring in this situation? <u>Habituation</u> Expectation Halo Effect Leniency	
			题目编号 100011694937 品鉴者给予的描述词超出了正在分析的产品范围，是基于该刺激让他们想起以前的经验。在这种情况下，可能发生了何种心理因素？ <u>联想</u> 预期效应 月晕效应 分心因素 Question ID: 100011694937 A taster gives descriptions that go beyond the scope of the product that is being analyzed based on how the stimulus reminds them of previous experiences. Which of the following psychological factors may be occurring in this situation? <u>Association</u> Expectation Halo Effect Distractions	

			题目编号 100011694938 品鉴者将巧克力蛋糕的颜色深度与巧克力风味的强度密切连结，故在巧克力风味强度上给予颜色较深的蛋糕较高分数。在这种情况下，可能发生了何种心理因素？ <u>逻辑</u> 预期效应 月晕效应 分心因素 Question ID: 100011694938 A taster closely relates the darkness of the color in a chocolate cake with the intensity of chocolate flavor. The taster gives cake with darker colors higher scores in intensity of chocolate flavor. Which of the following psychological factors may be occurring in this situation? <u>Logical</u> Expectation Halo Effect Distractions	
			题目编号 100011694939 由于长时间过度或重复接触，因此丧失对于某种刺激的敏感度时，可称之为习惯化。下列哪个名词适合形容在短时间内过度接触某刺激所导致的情况？ <u>适应</u> 月晕效应 联想 预期效应 Question ID: 100011694939 Habituation errors can occur when there is a loss of sensitivity to a stimulus due to repeated exposure over a long period of time. Which of the following is the term used for when overexposure happens in a short period of time? <u>Adaptation</u> Halo Effect Association Expectation	

			题目编号 100011694940 一名品鉴小组成员被告知，某项测试旨在比较自家产品与某竞争对手的获奖咖啡。在这种情况下，可能会发生何种心理因素而导致错误？ <u>刺激</u> 适应 联想 逻辑 Question ID: 100011694940 One member of a tasting panel is told that the goal of a test is to compare their own products with a prize-winning coffee from a competitor. Which of the following psychological factors might cause an error in this situation? <u>Stimulus</u> Adaptation Association Logical	
			题目编号 100011694941 品鉴者在感官测试中无法充分专注于所有感觉时，在这种情况下，可能会发生何种心理因素而导致错误？ <u>分心</u> 适应 联想 逻辑 Question ID: 100011694941 If a taster is not able to focus all their senses fully in a sensory test, which of the following psychological factors might cause an error? <u>Distractions</u> Adaptation Association Logical	

	2.将感官心理学因素的特定例子与相关错误进行配对 Match specific examples of sensory psychological factors with their named errors	在本活动中，学员将练习如何命名基于心理的偏见。 In this activity, learners practice naming psychologically based biases.	本主题共一项活动。 This topic has an activity. 请参阅附录 B - 活动准备指南 8 的指示 See instruction in 8. Appendix B - Activity Preparation Guide	
3.03.02 性格与态度的影响 Influence of Personality and Attitude	1.阐述影响客观感官测量的常见性格与态度因素。 State common personality and attitude factors that can affect objective sensory measurement	在喜好度测试中，性格、态度与信念的影响可能会显而易见，社会制约、性格、心情以及动机也会影响客观测量。 In hedonic measurements, the effects of personality, attitudes and beliefs can be apparent. Objective measurements can also be influenced by social conditioning, personality, mood, and motivation. 外向性格可能导致评估小组成员在评分尺度上使用较广泛的	题目编号 100011694946 某感官评估小组成员性格外向时，可能会导致下列何种结果？ <u>在评分尺度上使用较广泛的范围</u> 较其他成员倾向给予较低的分数 较其他成员倾向给予较高的分数 感到较无动力 Question ID: 100011694946 Which of the following might be the result of a sensory panel member's extroverted personality? <u>The panelist may use a wider range on scales.</u> The panelist might tend to give lower scores than other members. The panelist might tend to give higher scores than other members. The panelist might feel less motivated.	Carpenter, Roland P., David H. Lyon and Terry A. Hadsell. <i>Guidelines for Sensory Analysis in Food Product Development and Quality Control</i> , 35 Morten Meilgaard, Gail Vance Civille, and B. Thomas Carr, <i>Sensory Evaluation Techniques, 4th Edition</i> (Boca Raton: CRC Press LLC., 2006).

		范围。 An extroverted personality can result in panel members using a wider range on scales. 品鉴者对于特定品牌或类型咖啡的态度，会影响感官评估的结果。 A taster's attitude about a particular brand or type of coffee can influence the results of a sensory assessment.	题目编号 100011694947 下列何种因素可能会潜意识地影响感官评估小组成员的客观测量？（请选择所有适用选项） <u>性格</u> <u>动机</u> 性别 年龄 Question ID: 100011694947 Which of the following factors may subconsciously influence objective measurements by sensory panelists? (Select all that apply.) <u>Personality</u> <u>Motivation</u> Gender Age	
			题目编号 100011694948 下列叙述是否正确？团队士气会对感官评估结果造成影响。 <u>正确</u> 错误 Question ID: 100011694948 Is the following statement true or false? Team morale can skew the results of a sensory assessment. <u>True</u> False	

			题目编号 100011694949 下列叙述是否正确？相较于一般消费者，对特定咖啡品牌投注情感的员工更善于权衡品牌特征的优点与缺点。 正确 <u>错误</u> Question ID: 100011694949 Is the following statement true or false? Compared to an average consumer, employees invested in a specific coffee brand are better at weighing desirable characteristics against undesirable ones. True <u>False</u>	
3.03.03 感官评估中的偏见缓解 Mitigation of Bias in Sensory Assessment	1.解释如何在感官评估中缓解偏见 Explain how to mitigate bias in sensory assessment	缓解偏见与错误的最佳方法包括： Best practices to mitigate bias and error include: - 由第三方对样本进行严格编码（双盲法） Strict coding of samples by a third person (double-blinding) - 控制哪些样本进入哪些杯测会，以减少情境效应 Control of which samples get to which sessions to minimize the effect of context	题目编号 100011694953 准备一组感官测试准备样本时，为何要使用平衡、随机的呈现顺序？ <u>可以补足在测试之前已知的测试变量，进而最小化遗留效应与/或排序效应。</u> 刻意混淆品鉴者 有助于确保每个样本有公平的机会被正确评估 以上皆非 Question ID: 100011694953 Why are balanced and randomized presentation orders used when preparing samples for a set of sensory tests? <u>It compensates for test variables that are known before the test takes place, thus minimizing carry-over effect and/or presentation order effects.</u> It purposely confuses the tasters. It helps to make sure there is an equal chance for each sample to be evaluated correctly. None of the above	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 28-33. Harry T. Lawless and Hildegarde Heymann, <i>Sensory Evaluation of Food - Principles and Practices, Second Edition</i>, (New York: Springer Science & Business Media, LLC., 2010), 330-336.

		- 注意样本排列顺序采随机或平衡 Careful randomization or balance of the samples order - 如情况允许，使用复制品 Use of replicates when possible - 在提交杯测结果以前，严格禁止品鉴者互相交流 Strong prohibition on tasters communicating with other tasters before results are submitted - 如情况允许，在一个舒适与不受干扰的环境下品鉴 Whenever possible, a comfortable and distraction-free place to taste 在感官实验室里使用红色灯光，有助于掩盖样本的视觉外观，以减少视觉因素对其它属性的影响。 Using red light in a sensory lab helps to mask the visual appearance of the sample from influencing other attributes.	题目编号 100011694954 在品鉴一系列咖啡样本时，下列何者可以让偏见 / 残留效应最小化？（请选择所有适用选项） <u>将样本顺序随机排列提供给不同的品鉴者</u> <u>使用味蕾清洁剂</u> 缩短样本呈现之间的时间 为每位品鉴者建立特定的样本评估顺序 Question ID: 100011694954 Which of the following minimize bias/carry-over effect when tasting a series of coffee samples? (Select all that apply.) <u>Randomized sample order between tasters</u> <u>Palate cleansers</u> Minimized time between sample presentation Set order of samples for evaluation by each taster	
			题目编号 100011694955 下列何者最能说明为何要在感官实验室使用红色灯光？ <u>掩盖样本的视觉外观，以免其它属性受到影响</u> 不被外部照明影响 更佳地认识及评估样本的香气 更佳地评估样本的视觉属性 Question ID: 100011694955 Which of the following is the BEST reason for using a red light in a sensory lab? <u>To mask the visual appearance of the sample from influencing other attributes</u> To not be influenced by external lighting To better recognize and evaluate the aroma of a sample To better assess the visual attributes of a sample	

3.04 | 章节 | 咖啡品鉴者的风味轮与 WCR 辞典

3 个主题

| Section | COFFEE TASTER'S FLAVOR WHEEL AND WCR LEXICON

3 Topics

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
3.04.01 WCR 辞典与风味轮分类学 WCR Lexicon and Flavor Wheel Taxonomy	1.使用咖啡风味轮与 WCR 感官辞典 Use the Coffee Taster's Flavor Wheel and WCR Lexicon	WCR 感官辞典与咖啡风味轮有助于品鉴者开发他们辨别描述词并与他人一致的能力。 The WCR Lexicon and the Coffee Taster's Flavor Wheel help tasters develop their ability to identify descriptors and align with others. 这些工具可于参考或进行描述性评估时使用。 These tools can be used in when referencing or performing a descriptive assessment. 带领学员浏览 WCR 感官辞典与风味轮，讨论参照物与属性	题目编号 100011712588 下列何者最适合填入以下句子？ 多数 WCR 感官辞典案例中，一项参照物会被分配一项强度分数，并且标记为 _____ 或 _____ 的参考对象。 A. 香气、风味 B. 风味、感觉 C. 香气、味道 D. 味道、风味 Question ID: 100011712588 Which of the following terms BEST complete this sentence? In most cases in the WCR Lexicon, a reference is assigned an intensity score and labeled as either a(n) _____ or a(n) _____ reference. A. aroma, flavor B. flavor, sensation C. aroma, taste D. taste, flavor	World Coffee Research, <i>Sensory Lexicon Unabridged Definition and References, Second Edition</i> . (PDF, Portland: World Coffee Research, 2017).

		之间的差异。 <i>Walk learners through the WCR Lexicon and Flavor Wheel, discussing the difference between references and attributes.</i> 尽管本章聚焦于 WCR 感官辞典，附加的食材参照物也可以在咖啡价值评估规范中找到。 <i>While this section focuses on the WCR Lexicon, additional grocery references can be found in the Coffee Value Assessment Protocol.</i>	题目编号 100011694961 下列何者最适合填入以下句子？（名词可重复使用） 「过熟的香蕉」是一种 <u>A</u> 的范例，而「过熟 / 接近发酵的」是一种 <u>B</u> 的范例。 <u>A. 参照</u> <u>B. 属性</u> 酸质 口感 Question ID: 100011694961 Which of the following terms BEST complete this sentence? (Terms can be used more than once.) ‘Overripe banana’ is an example of a(n) <u>A</u>, while “Overripe/Near Fermented” is an example of a(n) <u>B</u>. <u>A. reference</u> <u>B. attribute</u> acid mouthfeel	
--	--	--	---	--

			题目编号 100011694962 下列何者最适合填入以下句子？(名词可重复使用) 根据 WCR 感官辞典，评估员可以在强度分数比较 ____A____ 在样本中的属性以及参照物的 ____B____。 A 与 B 强度 湿香 风味 品质 Question ID: 100011694962 Which of the following terms BEST complete this sentence? (Terms can be used more than once). According to the WCR Lexicon, the intensity score allows evaluators to compare the ____A____ of the attribute in a sample against the ____B____ of the reference. A & B intensity aroma flavor quality	
			题目编号 100011694963 下列叙述是否正确？WCR 参照物应始终与描述性评估分开使用。 正确 错误 Question ID: 100011694963 Is the following statement true or false? WCR references should always be used separately from descriptive assessment. True False	

3.04.02 WCR 辞典与咖啡品鉴者的风味轮开发 Development of the WCR Lexicon and Coffee Taster's Flavor Wheel	1.解释咖啡风味轮与WCR 感官辞典的由来 Explain the history behind the creation of the Coffee Taster's Flavor Wheel and WCR Sensory Lexicon	WCR 感官辞典是由来自德州农工大学以及堪萨斯州立大学的品鉴小组汇编而成。 Tasting panels from Texas A&M and Kansas State University generated the WCR Sensory Lexicon. 加州大学戴维斯分校则使用定量化描述分析以及自由多重排序法，整理出风味轮上的风味描述词。 UC Davis used quantitative descriptive analysis and free multiple sorting to organize the flavor terms onto the wheel. 当提案一个全新或修订过的参照物时，在提交给 WCR 的文件中必须包含新参照物原料的名称 / 品牌，以及现有的属性术语。 When suggesting a new or revised reference, the name/brand of the proposed new reference material and the existing attribute term must be included in the submission to WCR.	题目编号 100011694968 世界咖啡研究院（WCR）采用哪两所大学的科学品鉴小组制定了感官辞典？ <u>德州农工大学以及堪萨斯州立大学</u> 加州大学戴维斯分校以及俄克拉何马州立大学 麻省理工学院以及堪萨斯州立大学 阿肯色大学以及德州农工大学 Question ID: 100011694968 Word Coffee Research (WCR) utilized scientific tasting panels from which two universities to generate the Sensory Lexicon? <u>Texas A&M and Kansas State University</u> University of California, Davis and Oklahoma State University MIT and Kansas State University University of Arkansas and Texas A&M 题目编号 100011694969 加州大学戴维斯分校使用下列哪一组测试方法，将风味描述词整理到咖啡风味轮上？ <u>定量化描述分析和自由多重排序法</u> 高效液相色谱法（HPLC）和超临界二氧化碳加工法 喜好度评分和偏好排序 对照组的比较测试和配对 Question ID: 100011694969 Which of the following pairs of tests did the University of California, Davis use to organize the flavor terms onto the wheel? <u>Quantitative descriptive analysis and free multiple sorting</u> HPLC and critical CO₂ processing Hedonic rating and preference ranking Difference from control and matching pairs	World Coffee Research, <i>Sensory Lexicon Unabridged Definition and References, Second Edition</i>. (PDF, Portland: World Coffee Research, 2017).
--	--	---	--	--

		感官评估小组将审查提交的资料，以判断该提案的属性是否存在，且并未重复，同时他们也会制定强度分数。 A sensory panel reviews submissions to determine if the proposed attribute exists and doesn't duplicate information. They also generate an intensity score.	题目编号 100011694970 向 WCR 感官辞典建议全新或修订过的参考物时，应附带提交下列哪两者？ <u>新参照物原料的名称 / 品牌，必须是在美国透过主要零售商或在线可以广泛采购到的。</u> <u>现有的属性术语</u> 第三方对该建议参照物感官评估的结果 提交费用 Question ID: 100011694970 When suggesting a new or revised reference for the WCR Lexicon, which two of the following must accompany the submission? <u>The name/brand of the proposed new reference material, which must be widely available for purchase in the United States through major retailers or online.</u> <u>The existing attribute term</u> Results of a third-party sensory assessment of the suggested reference A submission fee	
--	--	--	--	--

			题目编号 100011694971 当受过训练的感官评估小组审查新的属性提交，是否该纳入未来版本的 WCR 感官辞典时，应包含下列哪些步骤？（请选择所有适用选项） <u>判断该提案的属性是否存在</u> <u>判断该提案的属性是否足以与现有的术语区别</u> <u>制定强度分数</u> 进行一项进 / 出测试 Question ID: 100011694971 Which of the following steps are included in the process when a trained sensory panel is reviewing submissions for new attributes to include in future editions of the WCR Sensory Lexicon? (Select all that apply.) <u>Determining whether the proposed attribute exists</u> <u>Determining whether the proposed attribute is sufficiently different from existing terms</u> <u>Determining an intensity score</u> Conducting an in/out test	
3.04.03 应用 WCR 辞典与风味轮 Applying the WCR Lexicon and Flavor Wheel	1. 将风味轮以及 WCR 辞典中的参照物与萃取咖啡的描述性特征配对 Match references from the Flavor Wheel and WCR Sensory Lexicon to descriptive characteristics in brewed coffee.		列入实作测验。 本主题共一项活动。 请参阅附录 B - 活动准备指南 8 的指示 Tested on Practical Exam. This topic has an activity. See instruction in 8. Appendix B - Activity Preparation Guide	

3.05 | 章节 | 咖啡的味觉属性

3 Topics

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
3.05.01 评比酸质与苦味的强度 Ranking Acidity and Bitterness Intensity	1. 评级一杯混合溶液中酸质及苦味的四种等级 Rank four levels of acidity and bitterness in a complex solution		列入实作测验。 本主题共一项活动。 请参阅附录 B - 活动准备指南 8 的指示 Tested on Practical Exam. This topic has an activity. See instruction in 8. Appendix B - Activity Preparation Guide	
3.05.02 评比甜度 Ranking Sweetness Intensity	1. 评级溶液中甜度的四种强度等级 Rank intensity of four levels of sweetness in a solution		列入实作测验。 本主题共一项活动。 请参阅附录 B - 活动准备指南 8 的指示 Tested on Practical Exam. This topic has an activity. See instruction in 8. Appendix B - Activity Preparation Guide	
3.05.03 咖啡的应用 Applied to Coffee	1. 评级咖啡里的酸质与苦味 Rank intensity of acidity and bitterness in coffee		列入实作测验。 本主题共一项活动。 请参阅附录 B - 活动准备指南 8 的指示 Tested on Practical Exam. This topic has an activity. See instruction in 8. Appendix B - Activity Preparation Guide	

3.06 | 章节 | 咖啡的口感

1 个主题

| Section | MOUTHFEEL IN COFFEE

1 Topic

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
3.06.01 口感 Mouthfeel	1.定义口感 Define mouthfeel	ICO 将口感描述为一种来自于口腔中与物理或化学特性相关的刺激感觉的综合体验 ICO describes mouthfeel as a mixed experience derived from sensations in the mouth that relate to physical or chemical properties of a stimulus. 在咖啡中有五种常见口感（触觉）感知： There are five common mouthfeel (tactile) sensations in coffee: • 粗糙（颗粒感、粉状、沙粒状） • rough (gritty, chalky, sandy) • 油滑 • oily	题目编号 100011694975 下列叙述是否正确？口感是指透过咖啡唤起的酸味感知。 正确 错误 Question ID: 100011694975 Is the following statement true or false? Mouthfeel is the perception of sour taste provoked by the brew. True False	International Organization for Standardization. <i>ISO 18794:2018 Coffee — Sensory analysis — Vocabulary</i>. Geneva, ISO, 2018. International Organization for Standardization. <i>ISO 18794:2018 Coffee — Sensory analysis — Vocabulary</i>. Geneva, ISO, 2018. <i>A New System to Assess Coffee Value: Introducing the Beta Version of the Specialty Coffee Association's Coffee Value Assessment (April 2023)</i>, (PDF, London: SCA, 2023), 24.
			题目编号 100011694976 根据 WCR 咖啡感官辞典，脱脂牛奶与发泡鲜奶油之间的口感差异，可用下列哪种名词来形容？ 油滑 干涩 甜度 焦糖 Question ID: 100011694976 According to the WCR Sensory Lexicon, the mouthfeel difference between skim milk and a whipping cream might be described using which of the following terms? Oily Drying Sweetness Caramel	

		• 滑顺 (绒滑、丝滑、糖浆) • smooth (velvety, silky, syrupy) • 口腔干涩 (涩感) • mouth-drying (astringent) • 金属 • metallic 相关定义可参阅咖啡价值评估规范。提醒学员 WCR 咖啡感官辞典包含四种相似的叙述词：油滑、厚实、口腔干涩与金属。 <i>Definitions can be found in the Coffee Value Assessment Protocol. Remind learners that the WCR Coffee Sensory Lexicon contains four similar descriptors: oily, thickness, mouth-drying, and metallic.</i>	题目编号 100011694977 根据咖啡价值评估规范，下列何者并非咖啡内可以找到的口感？ 苦 金属 油滑 干涩 Question ID: 100011694977 According to the Coffee Value Assessment Protocol, which of the following is NOT a mouthfeel sensation found in coffee? Bitter Metallic Oily Mouth-Drying	World Coffee Research, <i>Sensory Lexicon Unabridged Definition and References, Second Edition</i> , 53
	2.认识口感 Recognize mouthfeel sensations	在本活动中，学员将评估各种咖啡中的黏度，并体验 WCR 咖啡感官辞典中的口感参照。 In this activity, learners will evaluate varying viscosities in coffee, as well as experience mouthfeel references from the WCR Sensory Lexicon.	活动 3.06.01 详见附录 B 的指示 Activity 3.06.01 See instruction in Appendix B - Activity Preparation Guide	

3.07 | 章节 | 评估咖啡的属性

3 个主题

| Section | ASSESSING ATTRIBUTES IN COFFEE

3 Topics

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
3.07.01 属性的感知 Perceptions of Attributes	1.理解不同市场对于不同咖啡属性赋予不同的价值 Recognize that different coffee attributes are valued differently in different markets	由于属性本身具有价值，因此一个以属性为基础的框架较少强调普遍的质量标准，而更强调特定属性在多元市场中可能被推崇的方式。不同的文化自然也将对咖啡各方面赋予相当不同的价值。 As attributes are valuable in and of themselves, an attributes-based framework puts less emphasis on universal quality norms and more emphasis on the way particular attributes might be celebrated in diverse markets. Diverse cultures will naturally value aspects of coffees very differently.	列入实作测验。 本主题共一项活动。 请参阅附录 B - 活动准备指南 8 的指示 Tested on Practical Exam. This topic has an activity. See instruction in 8. Appendix B - Activity Preparation Guide	<i>Towards a Definition of Specialty Coffee: Building an Understanding Based on Attributes.</i> (Specialty Coffee Association, 2021) 8-10. Britta Folmer, ed., <i>The Craft and Science of Coffee</i> , (San Diego: Elsevier Inc. as

3.07.02 SCA 情感性评估 SCA Affective Assessment	1.利用 SCA 情感性评估表评估咖啡 Utilize the SCA Affective Form to assess coffees		列入实作测验。 本主题共一项活动。 请参阅附录 B - 活动准备指南 8 的指示 Tested on Practical Exam. This topic has an activity. See instruction in 8. Appendix B - Activity Preparation Guide	Academic Press, 2017), 51-75, 292, 300. <i>A New System to Assess Coffee Value: Introducing the Beta Version of the Specialty Coffee Association's Coffee Value Assessment (April 2023)</i> , (PDF, London: SCA, 2023), 15, 32.
3.07.03 瑕疵、走味与烘焙问题 Defects, Staling, and Roasting Problems	1.认识与咖啡中瑕疵、走味与烘焙问题相关的风味 Recognize flavors associated with defects, staling, and roasting problems in coffee 2.辨识供应链的哪一道步骤造成了各种风味 Identify which step in the supply chain causes each flavor	杯测瑕疵是业界明确定义的不可接受风味，通常是由于不良加工决策所导致的。 Cupping defects are recognizable industry-defined objectionable flavors that are usually the result of poor processing decisions. 这些瑕疵包括霉味、酚味以及马铃薯味（过度发酵已经不再被视为瑕疵，因为业界对于发酵风味何时成为瑕疵一事尚未达成共识。此外，里约臭被视为酚味的一部	题目编号 100011694984 在下列负面风味的例子中，何者与烘焙有关？（请选择所有适用选项） <u>焙烤的</u> <u>烘焙发展不足</u> <u>烧焦的</u> 走味 Question ID: 100011694984 Which of the following are examples of potentially negative flavors associated with roasting? (Select all that apply.) <u>Baked</u> <u>Underdeveloped</u> <u>Burnt</u> Stale	

	分)。 These defects are mold, phenol, and potato. (Over-ferment is no longer considered a defect because there is no consensus regarding when fermented flavors become indicative of a defect. Rio is seen as a subset of phenol). 与这些瑕疵有关的风味并非咖啡批次本身固有的风味，且往往与该批次给人的感受截然不同（尽管偶尔也会出现整批一致地具有瑕疵的情形，例如全部都有霉味）。 The flavors associated with these defects are not an inherent part of the flavor of the coffee lot and typically show up as distinctly different cups within an otherwise acceptable lot (although on occasion, lots can be uniformly defective, ex. all moldy). 不当的烘焙决策可导致负面的风味，如发展不完全、烧焦或有焙烤味的咖啡。 Poor roasting decisions can	题目编号 100011694985 在下列负面风味的例子中，何者与咖啡熟豆的储存方式有关？ (请选择所有适用选项) <u>走味</u> <u>腐臭的</u> 焙烤的 酚类味 Question ID: 100011694985 Which of the following are examples of negative flavors associated with roasted coffee storage? (Select all that apply.) <u>Stale</u> <u>Rancid</u> Baked Phenolic 题目编号 100011694986 下列何种因素不会导致与加速走味的反应？ <u>酶促的或微生物的处理</u> 接触氧气 环境温度 湿度升高 Question ID: 100011694986 Which factor below does NOT cause the staling reaction to occur and accelerate? <u>Enzymatic or microbial processes</u> Exposure to oxygen Environmental temperature Elevated humidity
--	---	---

		result in negative flavors from underdeveloped, burnt, or baked coffee. 走味（咖啡脂质氧化）发生在暴露于氧气、环境温度，和湿度升高的情况下，而包装不当也会加剧咖啡走味变质。 Staling (the oxidation of coffee lipids) occurs with exposure to oxygen, environmental temperature, and elevated humidity. Improper packaging can intensify staling. 使用未充分清洁的设备处理咖啡豆、干燥不足的咖啡、湿度波动，以及咖啡的渗透性质，都会导致咖啡出现霉味。 Processing coffee with poorly cleaned equipment, insufficient drying of coffee, fluctuations in moisture, and the porous nature of coffee can all contribute to moldy cups.	题目编号 100011694987 下列何种化学反应最明显地造成了咖啡走味？ <u>咖啡脂质的氧化</u> 纤维素分解形成多醣 碳水化合物转化为糖 纤维素的热分解作用 Question ID: 100011694987 Which of the following chemical reactions most obviously generates the taste/flavor of stale coffee? <u>The oxidation of coffee lipids</u> Cellulolysis resulting in polysaccharides The conversion of carbohydrates to sugars The thermolysis of the cellulose	
			题目编号 100011694988 下列何种瑕疵的成因，是使用不干净的设备处理咖啡？ <u>霉味</u> 马铃薯味 木质味 未熟青味 Question ID: 100011694988 Which of the following defects can be caused by processing coffee with poorly cleaned equipment? <u>Moldy</u> Potato Woody Unripe	

		题目编号 100011694989 下列何者并非可能造成霉味瑕疵的因素？ <u>采收未成熟的咖啡樱桃</u> 咖啡豆在运送前未干燥 咖啡豆的渗透性质 湿度的波动 Question ID: 100011694989 Which of the following is NOT a possible cause of the mold defect? <u>Picking unripe cherries</u> Coffee not dried before shipment Porous nature of coffee Fluctuation in moisture	
	在本活动中，学员将透过杯测或品尝咖啡，认识到咖啡中的常见负面风味，而这些风味可能是由于瑕疵、走味变质和烘焙问题导致的。 In this activity, learners are exposed to common negative flavors in coffee resulting from defects, staling, and roasting problems via cupping method or brewed coffee.	列入实作测验。 本主题共一项活动。 请参阅附录 B - 活动准备指南 8 的指示 Tested on Practical Exam. This topic has an activity. See instruction in 8. Appendix B - Activity Preparation Guide	

3.08 | 章节 | 感官描述性剖析

3 个主题

| Section | SENSORY DESCRIPTIVE PROFILING

3 Topics

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
3.08.01 感官描述性剖析基础 Sensory Descriptive Profiling Basics	1.说明如何为特定咖啡生成风味概要 State how to generate a flavor profile for a specific coffee	感官剖析仅评估描述性属性的强度，使用单一维度的属性和属性的强度。 Sensory profiling rates only the intensity of descriptive attributes. It uses mono-dimensional attributes and intensity of attributes. 由受过训练的品鉴者组成评估小组个别评估样本时，通常使用线性刻度来标记特定描述性属性的强度。 A panel of trained tasters rate samples individually, typically using a line scale to measure the intensity of certain descriptive attributes. 感官剖析的评估方法，包含定义、应用范围、蜘蛛图以及感官主成份分析图与任何感官测试的共通性。 The sensory profiling method involves definition, domain of	题目编号 100011694995 下列何者最能描述为感官描述性剖析与 SCA 杯测方法的差异？ <u>感官剖析仅评估描述性属性的强度</u> 两者皆是关于咖啡特性强度的评估 SCA 杯测法纯属描述性评估 感官剖析指出了咖啡的质量程度 Question ID: 100011694995 Which statement BEST describes the difference between sensory descriptive profiling and the SCA cupping method? <u>Sensory profiling rates only the intensity of descriptive attributes.</u> Both are coffee profiling of intensities. SCA cupping methodology is purely descriptive. Sensory profiling indicates the quality level of the coffee.	Morten Meilgaard, Gail Vance Civille, and B. Thomas Carr, <i>Sensory Evaluation Techniques, 4th Edition</i> (Boca Raton: CRC Press LLC., 2006). Harry T. Lawless and Hildegarde Heymann, <i>Sensory Evaluation of Food - Principles and Practices, Second Edition</i> , (New York: Springer Science & Business Media, LLC., 2010). Britta Folmer, ed., <i>The Craft and Science of Coffee</i> , (San Diego: Elsevier Inc. as Academic Press, 2017). ISO 13299:2016 <i>Sensory analysis - Methodology -General guidance for establishing a sensory profile</i>
			题目编号 100011694996 在感官描述性剖析评估中，使用下列哪两种属性？ <u>单一维度属性（例如：酸质）</u> <u>属性的强度（例如：酸质的程度）</u> 定性属性（例如：质量的印象） 情感属性（例如：充满活力的、放松的） Question ID: 100011694996 Which two of the following attributes are used in the sensory descriptive profile method? <u>Mono-dimensional attribute (e.g., acidity)</u> <u>Intensity of an attribute (e.g., degree of acidity)</u> Qualitative attribute (e.g., impression of quality) Emotional attribute (e.g., energizing, relaxing)	

		application, spider diagram and sensory PCA map commonalities with any sensory tests. 请参考SCA 风味轮与WCR 咖啡辞典的专业术语。 <i>Review terminology from the SCA Flavor Wheel and WCR Coffee Lexicon.</i>	题目编号 100011694997 下列叙述是否正确？在感官描述性分析评估中，会由受过训练的品鑑者组成评估小组对样本进行个别评分。 <u>正确</u> 错误 Question ID: 100011694997 Is the following statement true or false? In the sensory descriptive profile method, a panel of trained tasters rate samples individually. <u>True</u> False	
			题目编号 100011694998 下列叙述是否正确？感官描述性剖析评估通常使用线性刻度来标记产品中某些描述性属性的强度。 <u>正确</u> 错误 Question ID: 100011694998 Is the following statement true or false? Sensory descriptive profiling methods often use a line scale to measure the intensity of certain descriptive attributes in a product. <u>True</u> False	

			题目编号 100011694999 当评估小组针对特定风味进行校正时，小组组长可能会准备什么以展示各种感官属性或特征？ 参照物 复制品 三角杯测 SCA 情感性评估表 Question ID: 100011694999 To calibrate a panel on specific flavors, what might the panel leader prepare that demonstrates each sensory attribute or characteristic? References Duplicates Triangulation tests SCA Affective Forms	
	2.示范如何为特定咖啡生成感官描述性概要 Demonstrate how to generate a sensory descriptive profile for a specific coffee	在本活动中，AST 将引导学员完成成为特定咖啡生成感官特性概要的过程，并示范其应用。 In this activity, the AST will guide the learners through the process of generating a sensory profile for specific coffee and demonstrate the application.	本主题共一项活动。 请参阅附录 B - 活动准备指南 8 的指示 This topic has an activity. See instruction in 8. Appendix B - Activity Preparation Guide	

3.08.02 感官描述性方法 Sensory Descriptive Methods	1.说明各种使用于生成定量数据的感官描述性方法 State various sensory descriptive methods used to generate quantitative data	感官描述性方法生成用于表征一个咖啡样本，并与其它咖啡样本间进行比较的数值。 Sensory descriptive methods generate values to characterize one coffee sample and to compare between coffee samples. 一些感官描述性方法的范例： Some examples of sensory descriptive methods: - 风味轮廓法 (FPM) - Flavor profile method (FPM) - 定量描述分析 - Quantitative descriptive analysis (QDA) - analysis (QDA) - CATA (请选择适合项目) 映像 - CATA (check all that apply) mapping FPM 与开发 WCR 感官辞典时所用的方法相似，用于描述产品的词汇是透过评估小组成员间达成的共识所决定，受过训练的小组可使用此方法快速产生结果。词汇标准化在评估	题目编号 100011695004 下列何者为描述性测试方法的范例？(请选择所有适用选项) <u>风味轮廓法 (FPM)</u> <u>定量描述分析 (QDA)</u> <u>CATA 映射</u> 喜好度评分 Question ID: 100011695004 Which of the following are examples of descriptive test methods? (Select all that apply.) <u>Flavor profile method (FPM)</u> <u>Quantitative descriptive analysis (QDA)</u> <u>CATA mapping</u> Hedonic ranking 题目编号 100011695005 下列关于风味轮廓法的叙述何者正确？(请选择所有适用选项) <u>评估小组达成共识建立产品描述词</u> <u>评估小组成员应使用标准化词汇</u> <u>该方法可以快速产生结果</u> 该方法常用于消费者测试 Question ID: 100011695005 Which of the following statements are TRUE about the flavor profile method? (Select all that apply.) <u>The panel uses consensus to create product descriptors.</u> <u>Panelists should use standardized vocabulary.</u> <u>It can produce results rapidly.</u> It is used often in consumer testing.	Harry T. Lawless and Hildegard Heymann, <i>Sensory Evaluation of Food - Principles and Practices, Second Edition</i>, (New York: Springer Science & Business Media, LLC., 2010), 231-238.
---	--	--	--	--

		小组成员间是至关重要的。 FPM is similar to what was used in the development of the WCR Sensory Lexicon. The vocabulary used to describe the product is achieved by reaching agreement among panel members. A trained panel can produce results rapidly using this method. Vocabulary standardization among panelists is very important.	题目编号 100011695006 哪种感官评估与开发 WCR 感官辞典时所用的方法最为相似？ <u>风味轮廓法</u> 定性描述性分析 SCA 杯测法 SCA 情感性评估 Question ID: 100011695006 Which form of sensory assessment is MOST similar to what was used in the development of the WCR Sensory Lexicon? <u>Flavor profile method</u> Qualitative descriptive analysis SCA cupping methodology SCA Affective Assessment	
			题目编号 100011695007 下列何者并非属于统计学的、描述性的感官剖析方法？ <u>三角杯测</u> 风味轮廓法 定量描述性分析 CATA (请选择所有适合项目) Question ID: 100011695007 Which of the following is NOT a statistical, descriptive sensory profiling method? <u>Triangulation test</u> Flavor profile method Quantitative descriptive analysis CATA (check all that apply) mapping	

3.08.03 分析数据与诠释结果 Analyzing Data and Interpreting Results	1.说明在正式感官描述性剖析中常用的各种统计方法 State various statistical methods commonly used in formal sensory descriptive profiling	剖析性的分析需要统计工具来确定平均值是否显著不同，并将结果投射到多维度映射图上。 Profiling analysis requires statistical tools to determine whether averages are significantly different and to project results on a multidimensional map. 一些统计工具的范例： Some examples of statistical tools: - ANOVA (变异数分析) - ANOVA (Analysis of Variances) - PCA (主要成分分析) - PCA (Principal Component Analysis) 示范PCA 以及如何读取分析结果，回顾研究结果，了解哪些咖啡的平均值没有显著不同，并进行讨论。 Demonstrate PCA and how to read the analysis. Review study results where coffee averages are not significantly different and discuss.	仅供教学，未列入施测内容。 Taught, not tested.

3.09 | 章节 | 杯测与 SCA 标准

3 个主题

| Section | CUPPING AND SCA PROTOCOL

3 Topics

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
3.09.01 杯测法复习 Cupping Methodology Review	1. 定义与 SCA 杯测法相关的重要术语 Define key terminology related to the SCA cupping methodology 2. 概述杯测规范 Summarize cupping protocols 3. 解释 SCA 描述性以及情感性评估表的主要组成 Explain the key components of the SCA Descriptive and Affective Forms	复习中级课程的相关内容 (2.04 章节) <i>Review relevant content from Intermediate (Section 2.04)</i>	题目编号 100011695025 关于 SCA 描述性评估表上的香气属性，下列哪两项叙述无误？ <u>杯测者可使用「CATA 列表」来描述香气的特征</u> <u>一杯香气强度较低的咖啡在强度评级上会获得 5 分或更低</u> 杯测者可使用九分制喜好度量表描述香气的强度 具有不愉悦香气的咖啡在强度评级上会获得 10 分或更高 Question ID: 100011695025 Which two of the following statements are true regarding the attribute of aroma on the SCA Descriptive Form ? <u>A cupper can use the check-all-that-apply (CATA) list to describe the aroma's character.</u> <u>A coffee that has a low-intensity aroma would receive a 5 or below on the intensity scale.</u> A cupper can use the nine-point hedonic scale to describe the aroma's intensity. A coffee with an unpleasant aroma would receive a 10 or above on the intensity scale.	Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 16-22, 70-91. Mario Roberto Fernández-Alduenda and Peter Giuliano, <i>Coffee Sensory and Cupping Handbook</i> (London: Specialty Coffee Association, September 2021), 104-109, 116-117. <i>A New System to Assess Coffee Value: Introducing the Beta Version of the Specialty Coffee</i>

			题目编号 100011695026 品鉴者在对一个咖啡样本进行描述性评估时，察觉到中等强度的酸质，故在强度评分时，该品鉴者应使用下列哪个范围？ 0 到 4 之间 6 到 10 之间 11 到 15 之间 16 到 20 之间 Question ID: 100011695026 A taster detects a medium-intensity acidity while conducting a descriptive assessment on a coffee sample. Which of the following ranges should the taster use when assigning an intensity rating? Between 0 and 4 Between 6 and 10 Between 11 and 15 Between 16 and 20	<i>Association's Coffee Value Assessment (April 2023), (PDF, London: SCA, 2023), 5-33.</i> <i>ISO TC 34/SC 15N:2113, Coffee -Sensorial Analysis - Vocabulary</i> Britta Folmer, ed., <i>The Craft and Science of Coffee</i>, (San Diego: Elsevier Inc. as Academic Press, 2017).
			题目编号 100011695027 在进行情感性评估时，杯测者对某咖啡的甜度印象非常高，杯测者应该给予下列哪个评分？ 1 5 9 15 Question ID: 100011695027 While conducting an affective assessment, a cupper experiences an extremely high impression of quality for a coffee's sweetness. Which of the following ratings should the cupper use? 1 5 9 15	

			题目编号 100011699837 下列何者最适合填入以下句子？根据 SCA 咖啡价值评估规范，咖啡粉应在评估之前静置浸泡 _____ 分钟。 1-2 <u>3-5</u> 5-7 13-15 Question ID: 100011699837 Which of the following BEST completes this sentence? According to the SCA Coffee Value Assessment Protocol, coffee grounds should be allowed to steep undisturbed for a period of _____ minutes before evaluation. 1-2 <u>3-5</u> 5-7 13-15	
			题目编号 100011695028 根据 SCA 咖啡价值评估规范，应在大约什么温度时进行风味分析？ 摄氏 38 度 / 华氏 100 度 摄氏 49 度 / 华氏 160 度 <u>摄氏 71 度 / 华氏 160 度</u> 摄氏 80 度 / 华氏 176 度 Question ID: 100011695028 According to the SCA Coffee Value Assessment Protocol, at approximately what temperature should flavor be analyzed? 38°C / 100°F 49°C / 120°F <u>71°C / 160°F</u> 80°C / 176°F	

			题目编号 100011695029 根据 SCA 咖啡价值评估规范，8.25 克的咖啡应使用的水量为？ 100 毫升 <u>150 毫升</u> 175 毫升 200 毫升 Question ID: 100011695029 According to the SCA Coffee Value Assessment Protocol, which quantity of water should be used for 8.25 grams of coffee when preparing a cupping bowl? 100 mL <u>150 mL</u> 175 mL 200 mL	
			题目编号 100011695030 下列哪两者最能描述「一致性」？ <u>评定风味不一致的属性</u> <u>咖啡批次的均质性指标</u> 咖啡吞咽后留下的印象 对咖啡质量的一般印象 Question ID: 100011695030 Which two of the following statements BEST describe uniformity? <u>An attribute rated as the number of non-uniform cups.</u> <u>An indicator of the coffee lot's homogeneity.</u> The impression left behind after a brew has been swallowed. The general impression of the quality of a coffee.	

			题目编号 100011695031 在 SCA 描述性评估表中，强度评分为「15」的香气最能描述为 _____ 强度。 <u>高</u> 中 低 正向的 Question ID: 100011695031 An aroma rated '15' on the intensity scale on the SCA Descriptive Form can be BEST described as _____ intensity. <u>High</u> Medium Low Positive	
			题目编号 100011695032 关于 SCA 情感性评估表上的酸质属性，下列叙述何者正确？ <u>一杯具有良好酸质的咖啡，可获得 6 分或更高</u> 一杯具有良好酸质的咖啡，可获得 4 分或更低 高质量的酸质意味着酸质的强度也很高 高质量咖啡一般不讲究酸度 Question ID: 100011695032 Which of the following statements is true regarding the attribute of acidity on the SCA Affective Form? <u>A coffee that has an acidity with a positive impression of quality would receive a 6 or above.</u> A coffee that has an acidity with a positive impression of quality would receive a 4 or below. High quality acidity means the intensity of the acidity is also high. Acidity is generally something not sought after in high quality coffee.	

			题目编号 100011695033 下列哪两者为客观性描述？ <u>该咖啡具有强烈红色果实香气和强烈的酸质</u> <u>该咖啡具有中等强度的可可香气以及厚实的口感</u> 该咖啡具有活泼的酸质以及令人愉悦的余韵 该咖啡既强烈又尖锐 Question ID: 100011695033 Which two of the following sentences are objective descriptions? <u>The coffee has an intense red fruit aroma and an intense acidity.</u> <u>The coffee has a medium intense cocoa aroma and heavy mouthfeel.</u> The coffee has a fine lively acidity and a pleasant finish. The coffee is aggressive and sharp.	
3.09.02 杯测处理的考虑 Processing Considerations with Cupping	1.将产地以及加工处理的概括性变异以及其影响与描述性特质连结起来 Relate generalities of origin and processing variation and their effect on descriptive qualities	与学员讨论，一般而言，何种感官属性以及如何受到常见的加工处理技术影响，以及如何在杯测评估表上缓解偏见。 <i>Discuss with the learners, in general terms, what and how sensory attributes may be affected by common processing techniques, and how to mitigate bias at the cupping table.</i>	题目编号 100011695037 下列何者最适合填入以下句子？在大多数情况下，日晒处理法的咖啡具有较高强度的_____。 <u>口感</u> 酸质 干香 湿香 Question ID: 100011695037 Which of the following terms BEST completes this sentence? In most cases, natural processed coffees have a higher intensity _____. <u>Mouthfeel</u> Acidity Fragrance Aroma	

			题目编号 100011695038 下列何者最适合填入以下句子？在大多数情况下，湿剥处理法的咖啡具有较低强度的 _____。 <u>酸质</u> 口感 干香 湿香 Question ID: 100011695038 Which of the following terms BEST completes this sentence? In most cases, wet-hulled coffee has a lower intensity _____. <u>Acidity</u> Mouthfeel Fragrance Aroma	
			题目编号 100011695039 在大多数情况下，经过较强烈或更长时间发酵的咖啡，具有较高强度的哪两种描述性属性？ <u>水果味</u> <u>发酵味</u> 坚果味 生青味 Question ID: 100011695039 In most cases, a coffee that undergoes more intense or extended fermentation has a higher intensity of which two descriptive attributes? <u>Fruity</u> <u>Fermented</u> Nutty Green	

3.09.03 SCA 描述性评估 SCA Descriptive Assessment	1.与其他品鉴者校正 SCA 描述性评估表上的 「选择所有合适项目」 (CATA) 结果与强度 Calibrate with other tasters on check all that apply (CATA) results and intensities on the SCA Descriptive Form	在本活动中，学员将与其 他品鉴者就强度以及 CATA 结果进行校正。 In this activity, learners will calibrate with other tasters on intensity and CATA results.	本主题共一项活动。 请参阅附录 B - 活动准备指南 8 的指示 This topic has an activity. See instruction in 8. Appendix B - Activity Preparation Guide	
--	--	---	--	--

3.10 | 章节 | 感官评估小组与校正应用

4 个主题

| Section | SENSORY PANELS AND CALIBRATION APPLIED 4 Topics

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
3.10.01 建立一个企业的 感官评估小组 Setting Up a Sensory Panel in a Business	1.示范如何在企业中 建立客观的感官评 估小组 Demonstrate how to set up objective sensory assessment in one's business	当为企业建立感官评估小组 时，应制定一份计划，包含 筛选潜在品鉴者、训练品鉴 者以及校正品鉴者。 When setting up a sensory panel for a business, create a plan for screening the sensitivity of potential tasters, training tasters, and calibrating tasters. 评估小组组长应确保小组有 效运作并完成要求的任务。 The panel leader ensures that	题目编号 100011695044 当为企业建立感官评估小组时，下列哪个步骤是重要的？（请选择所有适用选项） <u>筛选潜在品鉴者</u> <u>训练品鉴者</u> <u>校正品鉴者</u> 淘汰非咖啡专家 Question ID: 100011695044 Which of the following steps are essential when setting up a sensory panel for a business? (Select all that apply.) <u>Screen the sensitivity of potential tasters.</u> <u>Train tasters.</u> <u>Calibrate tasters.</u> Remove non-coffee experts.	Harry T. Lawless and Hildegard Heymann, <i>Sensory Evaluation of Food - Principles and Practices, Second Edition</i> , (New York: Springer Science & Business Media, LLC., 2010). Morten Meilgaard, Gail Vance Civille, and B. Thomas Carr, <i>Sensory Evaluation Techniques, 4th Edition</i> (Boca Raton: CRC Press LLC., 2006).

		the panel performs effectively and completes required tasks. 在挑选评估小组成员时，应考虑小组的人际关系化学反应。此外，选择成员时，配合度和参与意愿是最重要的评估标准。 The interpersonal chemistry of the group should be considered when selecting members of the panel. Availability and willingness to participate are the most important criteria when selecting a member.	题目编号 100011695045 下列何种角色会负责确保各评估小组发挥最佳能力，并有效完成任务？ <u>评估小组组长</u> 感官分析员 感官评估员 研究与开发主管 Question ID: 100011695045 Which of the following roles would be responsible for ensuring that each panel performs to the best of its ability and that the required tasks are completed effectively? <u>Panel leader</u> Sensory analyst Sensory assessor Research and development supervisor	
			题目编号 100011695046 下列叙述是否正确？当为企业挑选感官评估小组成员时，应该考虑团体中的人际关系化学反应。 <u>正确</u> 错误 Question ID: 100011695046 Is the following statement true or false? When selecting members of a sensory panel within a business, the interpersonal chemistry of the group should be considered. <u>True</u> False	

			题目编号 100011695047 下列何者为挑选感官评估小组成员时最重要的评估指标？ <u>配合度和参与意愿</u> 个人健康习惯 良好的性格 良好的感官敏锐度 Question ID: 100011695047 Which of the following is the most important general criteria in the selection of a sensory panel member? <u>Availability and willingness to participate</u> Healthy personal habits Good personality Good sensory acuity	
3.10.02 准备一项培训计划 Preparing a Training Program	1.为企业准备一个感官评估小组或小组成员的培训计划 Prepare a training program for a sensory panel or panelist within one's own business	感官培训应增加品鉴者的自信心、动机和感官能力。在进行描述性评估训练时，拓展感官词汇是一项重要的步骤。 Sensory training should increase self-confidence, motivation, and sensory abilities of the taster(s). Developing a sensory vocabulary is an important step when training for descriptive assessment.	题目编号 100011695052 正确的感官评估小组成员培训内容，应实现下列哪三个目标？ <u>提高自信</u> <u>增加动机</u> <u>加强感官能力</u> 增加品牌忠诚度 Question ID: 100011695052 The proper training of sensory panel members should be designed to accomplish which three of the following goals? <u>Increase self-confidence</u> <u>Increase motivation</u> <u>Increase sensory ability</u> Increase brand loyalty	Morten Meilgaard, Gail Vance Civile, and B. Thomas Carr, <i>Sensory Evaluation Techniques, 4th Edition</i> (Boca Raton: CRC Press LLC., 2006). Alejandra M. Muñoz, Gail Vance Civile, and B. Thomas Carr, <i>Sensory Evaluation In Quality Control</i> (New York: Springer Science+Business Media 1992).

		在针对特定测试培训小组之前，应对小组成员进行训练，内容包括测试的组织格式、该任务的感官过程，以及测验表格或问卷，对感觉器官生理学的正式指导也是相当有帮助的。 Before training a panel for a specific test, panelists must be trained in test organization and format, the sensory process of the task, and the test form or questionnaire. Formal instruction on the physiology of sense organs is also useful.	题目编号 100011695053 在为一项特定的测试培训评估小组之前，必须进行以下哪些领域的培训？ 测验组织和格式 任务的感官过程 测验表格或问卷 <u>以上皆是</u> Question ID: 100011695053 Prior to training a panel for a specific test, general training must take place in which of the following areas? Test organization and format The sensory process of the task The test form or questionnaire <u>All of the above</u>	Roland P. Carpenter, David H. Lyon, and Terry A. Hadsell, <i>Guidelines for Sensory Analysis in Food Product Development and Quality Control – Second Edition</i> (Gaithersburg: Aspen Publishers, Inc. 2000), 82-84
			题目编号 100011695054 下列何者是培训感官小组进行描述性测试的重要步骤？ <u>拓展感官词汇</u> 辨别可做为比较的感官属性 分享公司产品的目标概要 在小组成员之间建立阶级制度 Question ID: 100011695054 Which of the following is an important step in training a panel for descriptive testing? <u>Developing a sensory vocabulary</u> Identifying the sensory attribute that is to serve as a comparison Sharing the target profile for a company product Creating a hierarchy within the panel members	

			题目编号 100011695055 下列叙述是否正确？感官评估小组成员应接受关于感觉器官生理学的正式指导。 <u>正确</u> 错误 Question ID: 100011695055 Is the following statement true or false? Sensory panel members should receive formal instruction about the physiology of sense organs. <u>True</u> False	
3.10.03 感官评估小组成效验收与校正 Sensory Panel Performance Check and Calibration	1.概述感官评估小组成效验收与校正系统 Outline a system for sensory performance check and calibration	感官评估小组成员应以下列标准接受评定： Sensory panelists should be judged on the following criteria: - 可重复性 - Repeatability - 区分能力 - Discrimination - 相关性 / 一致性 - Correlation/Alignment 标准参照物样本用于评估感官评估小组的能力。 Standard reference samples are used to assess the sensory panelists' abilities.	题目编号 100011695061 下列何者为描述一个在感官杯测会开始时使用的标准化产品，用来提醒品鉴者特定的感觉或强度，以便进行比较的最佳名词？ <u>开放式控制</u> 盲测 交互参照产品 编码控制 Question ID: 100011695061 Which of the following is the best term to describe when a standardized product is used at the start of a sensory session to remind tasters about a particular sensation or intensity to be used for comparison? <u>Open control</u> Blind control Cross-reference product Coded control	Carpenter, Roland P., David H. Lyon and Terry A. Hadsell. <i>Guidelines for Sensory Analysis in Food Product Development and Quality Control</i>, 35 Carpenter, Roland P., David H. Lyon and Terry A. Hadsell. <i>Guidelines for Sensory Analysis in Food Product Development and Quality Control</i>, 135

		开放式控制品是在感官杯测试开始时使用的标准化产品，用来提醒品鉴者特定的感觉或强度，以便进行比较。 An open control is a standardized product used at the start of a sensory session to remind tasters of a particular sensation or intensity to be used for comparison. 个体的表现必须与同一小组中其他评估员的表现进行比较。 An individual's performance must be considered against the performance of other assessors on the same panel. 环状测试可用来评估感官评估的一致性。 A ring test can be used to assess the consistency of sensory assessments.	题目编号 100011695062 当无法或不可能为某特定类型的食物（如咖啡）确定一个标准化样本时，个体的表现必须与下列何者进行比较？ <u>同一评估小组的其他成员</u> 该评估员先前的品鉴报告 评估员就相似产品的全国平均值 贸易协会为该产品所制定的标准 Question ID: 100011695062 When it is not practical or possible to identify a standard product for a certain type of food, like coffee, an individual's performance must be considered against which of the following? <u>Other assessors on the same panel</u> The assessor's previous tasting report The national average for assessors of similar products The standard set forth by the trade association for the product 题目编号 100011695063 下列哪个标准可用于衡量个体评估与其他小组成员一致性的程度？ 可重复性 区分能力 相关性 / 一致性 <u>以上皆是</u> Question ID: 100011695063 Which of the following criteria can be used when measuring how well each individual assessment agrees with the rest of the panel? Repeatability Discrimination Correlation/Alignment <u>All of the above</u>	
--	--	--	--	--

			题目编号 100011695064 某家拥有多处据点和独立感官评估小组的公司，想要在这些评估小组之间进行比较测试，下列哪个名词适合用来描述这些测试？ <u>环状测试</u> 团体测试 网状测试 以上皆是 Question ID: 100011695064 When one company has multiple locations and separate sensory panels, the company may want to conduct a comparative test among these panels. Which of the following is a term often used to describe these tests? <u>Ring test</u> Team test Net test All of the above	
--	--	--	---	--

			题目编号 100011695065 下列何者为品鉴者参加感官描述性剖析时，进行分数校正的最佳方式？ <u>在盲测时，品尝已知/经过讨论的参考样本，并根据该样本调整自己的分数。</u> 在盲测时，指出哪个是参考样本，以及其分数。 无需进行校正，因为这是该方法学的一部份。 于品鉴咖啡时大声讨论 Question ID: 100011695065 Which of the following is a best practice for tasters to align their scores when participating in sensory descriptive profiling? <u>In a blind evaluation session, taste reference samples with known/agreed scores and then adjust individual scores to them.</u> Indicate in the blind evaluation session which is the reference sample and what score it has earned. There is no need to calibrate because it's part of the methodology. Discuss out loud while tasting coffees.	
3.10.04 评估小组成员的健康与福祉 Health and Welfare of Panel Members	1.辨识感官测试可能对感官评估小组成员造成的健康风险 Identify the health risks that sensory testing could pose to sensory panel members 2.制定做法与政策以减轻感官测试时可能涉及的健康风险。 Generate practices and policies to	风险来源： Sources of risk: • 设备 Equipment • 产品储存 Product storage • 环境 Environment • 新鲜度 Freshness 了解法规要求是很重要的，例如，在某些地区，负责准	题目编号 100011695071 在某些国家，感官评估的哪个部分可能需要有人具备食品安全处理的认证？ <u>样本制备</u> 实验设计 感官评估 统计分析 Question ID: 100011695071 In some countries or states, which part of sensory assessment might require someone to have certification for safe food handling? <u>Sample preparation</u> Experimental design Sensory assessment Statistical analysis	Roland P. Carpenter, David H. Lyon, and Terry A. Hadsell, <i>Guidelines for Sensory Analysis in Food Product Development and Quality Control – Second Edition</i> (Gaithersburg: Aspen Publishers, Inc. 2000), 88-93

	mitigate possible health risks involved in sensory testing.	备样本的人是否需要具备「食品处理员」的资格？ It is important to be aware of regulatory requirements. For example, in a certain location, are the individuals preparing the samples required to be “food handlers”? 讨论鼓励员工自主提报可能有传染病症状而不受惩罚的公司文化，并考虑为公司制定一项感染疾病报告政策。 Discuss the importance of creating a culture of welcome self-reporting of possible infectious symptoms without consequence. Consider having an Infectious Illness Reporting Policy for your company.	题目编号 100011695072 下列何者并非设备可能构成的健康与安全风险？ <u>对样本的过敏反应</u> 杯测匙的细菌污染 未标示的加热板表面 产品储存超出指定的温度范围 Question ID: 100011695072 Which of the following is NOT an example of equipment being a possible health and safety risk? <u>Allergic response to a sample</u> Bacterial contamination of a spoon An unmarked hotplate surface Product storage out of specified temperature range 题目编号 100011695073 下列何者可能会对感官评估员的健康与安全构成风险？ 设备 产品 环境 <u>以上皆是</u> Question ID: 100011695073 Which of the following can be sources of health and safety risks for sensory assessors? Equipment Products Environment <u>All of the above</u>	
--	---	--	--	--

		题目编号 100011695074 受污染的样本是属于哪一类型的安全与健康风险？ <u>产品</u> 设备 环境 设计 Question ID: 100011695074 Contaminated samples are an example of which kind of health and safety risk? <u>Product</u> Equipment Environment Design	
		题目编号 100011695075 如果评估小组成员有传染性疾病的症状，小组组长应采取下列何种行动？ <u>让生病成员离开评估小组，直到他们痊愈。</u> 忽略该症状，以确保评估小组拥有足够的成员数量。 让该名生病的评分员在其余成员完成评估后评估样本 修改评估规范以顺应该名生病的评估小组成员 Question ID: 100011695075 If a panelist has symptoms of an infectious illness, the panel leader should take which of the following actions? <u>Remove the sick panelist from the panel until they are healthy.</u> Ignore it to ensure the panel has the desired number of panelists. Let the sick panelist evaluate the sample only after the rest of the panel has done their evaluation. Adapt their evaluation protocols to accommodate the sick panelist.	

3.11 | 章节 | 应用 – 有效期、消费者测试，以及新产品开发

4 个主题

| Section | APPLICATION – SHELF LIFE, CONSUMER TESTING, AND NEW PRODUCT DEVELOPMENT

4 Topics

主题 Topic	目标 Objectives	AST 注释 AST Notes	在线笔试题目 Online Written Exam Questions	参考文献 References
3.11.01 制定有效期 Determining Shelf Life	1.制定一个感官和分 析测试计划，以判 定符合产品质量目 标适当有效期。 Develop a plan for sensory and analytical testing to determine an appropriate shelf life that meets a product's quality standards	在设定最佳赏味/有效日期 时，有必要考虑食品质量、安 全性和法规等广泛背景。就食 品安全而言，烘焙咖啡是一项 低含水、低风险产品。因此， 确定咖啡产品的有效期，重点 在于判断咖啡感官质量变得不 可接受的时间点。 It helps to set the Best By/ Expiry dates in the wider context of food quality, safety, and regulation. In the context of food safety, roasted coffee is a	题目编号 100011695081 下列何种为判断产品有效期最简单的感官测试方法？ <u>合格 / 不合格</u> 三角杯测 描述性剖析 情感性评估 Question ID: 100011695081 Which of the following sensory tests is the simplest to use in determining the shelf life of a product? <u>Pass/Fail</u> Triangulation test Descriptive profiling Affective assessment	Andrea Illy and Rinantonio Viani, eds. <i>Espresso Coffee: The Science of Quality</i> . (San Diego: Elsevier Inc. as Academic Press, 2017). Andrea Illy and Rinantonio Viani, eds. <i>Espresso Coffee: The Science of Quality</i> . (San Diego: Elsevier Inc. as Academic Press, 2005).

	2. 辨识与产品效期相关的感官评估的常见分析方法 Identify common analytical methods to support sensory assessments related to shelf life	low moisture, low risk product; so, determining the shelf life of the coffee products is more a matter of determining when the coffee becomes unacceptable in terms of sensory quality. 感官测试的进行通常与分析测量（例如：氧气仪）相关。Sensory tests are usually carried out in relation with analytical measurements (e.g., oxygen meter). 焦点应摆在导致咖啡走味 / 质量恶化的两大因素，与有助支	题目编号 100011695082 感官评估的有效期可佐以下列何种统计学测试？（请选择所有适用选项） <u>氧气分析</u> <u>包装密封压力测试</u> <u>湿度内容</u> HPLC / 色彩光谱学 Question ID: 100011695082 Which of the following analytical tests support a sensory assessment for shelf-life quality? (Select all that apply.) <u>O₂ test</u> <u>Bag seal pressure test</u> <u>Moisture content</u> HPLC / color spectrometry	
--	--	---	---	--

		持感官数据的常见分析测试方法： Focus on two main factors that aid in coffee stalling/sensory degradation and common analytical tests that can be performed to support sensory data: - 氧化 (氧气测试、顶空分析、包装密封压力测试) - Oxidation (O₂ Test, Headspace Analysis, Bag Seal Pressure Test) - 湿度 (水分计、包装密封压力测试) - Moisture (Moisture Meter, Bag Seal Pressure Test) 如有必要，请参考3.07.03 走味 / 不新鲜的咖啡。 <i>If relevant, refer to stale/rancid coffee tasted in 3.07.03.</i> 咖啡在烘焙后会发化学变化，随着时间变得不新鲜。咖啡中的二氧化碳减少，过氧化物生成，同时不良风味也会增加。 Coffee changes chemically after roasting as it stales. CO₂ decreases in coffee, peroxides develop, and there is also an increase in off flavors.	题目编号 100011695083 某品管专家完成了产品包装的定性感官测试，并判断该产品尝起来已氧化。然而，该样本仍在标示的最佳赏味期限内。下列哪两种分析测试有助于支持感官评估？ <u>顶空氧气分析</u> <u>包装密封压力测试</u> 色彩光谱学 三角杯测 Question ID: 100011695083 A quality control professional has completed a qualitative sensory test on a packaged product and determines that it tastes oxidized. However, the sample falls within the stated best-by date. Which two of the following analytical tests could help support the sensory assessment in the following situation? <u>Headspace O₂ analysis</u> <u>Bag seal pressure test</u> Color spectrometry Triangulation test	
			题目编号 100011695084 下列哪个频率是在测试有效期时常见的最低频率？ 每日 每周 <u>每月</u> 每年 Question ID: 100011695084 Which of the following frequencies is a common minimum used in testing for shelf life? Daily Weekly <u>Monthly</u> Yearly	

		测试的频率和确定期随着产品的有效期而变化，烘焙商通常会根据内部的质量标准，将产品的有效期定义在 1 到 12 个月之间。 The frequency of testing and period of determination changes throughout the shelf-life product. Roasters usually define their shelf life between 1 and 12 months. This is done depending on internal quality standards. <i>建议最少以每月一次的频率进行有效期的测试。</i> <i>Recommend a minimum frequency of monthly for shelf-life testing.</i> <i>提出几个不同的场景并讨论用什么类型的测试以及使用何种类型的评估小组（请参阅中级课程的进/出测试方法）。例如：喜好度或是描述性测试？消费者或受过训练的品鉴者？加速或实际情境下的有效期？是否使用参照物样本？</i> <i>Pose a few different scenarios and discuss what type of test to apply and which type of panel to use (see Intermediate for In/Out). ex. Hedonic or descriptive? Consumer or trained tasters? Accelerated or real time shelf life? Use of reference sample or not?</i>	题目编号 100011695085 当受过训练的感官品鉴者进行咖啡熟豆的有效期研究时，应考虑使用下列哪两种感官测试？ <u>三角杯测</u> <u>对照比较测试</u> 喜好度测试 排序测试 Question ID: 100011695085 Which two of the following sensory tests should be considered when trained sensory tasters are conducting a shelf-life study on roasted coffee beans? <u>Triangulation testing</u> <u>Difference from control</u> Hedonic testing Ranking	
--	--	---	---	--

3.11.02 消费者测试 Consumer Testing	1.列出并定义常见于消费者测试的应用 List and define the common applications for consumer tests	消费者测试用于在特定人群中寻求对产品的偏好或接受度。 Consumer tests are used when seeking preference or acceptability of a product within a given population. 使用消费者测试以发掘消费者偏好、判断消费者容忍度、判断增加 / 更改 / 移除哪种产品，并优化质量及 / 或成本。 Use consumer tests to discover customer preferences, determine consumer tolerances, determine which products to add/change/remove, and optimize quality and/or cost. 常见测试方法： Common Test Methods: ● 偏好对比 Paired Preference ● 偏好排序 Ranked Pairs ● 喜好度量表评分 Hedonic Rating	题目编号 100011695090 下列何种测试可比较消费者针对两种产品的偏好？ <u>偏好对比</u> 偏好排序 嗜好性评分 对照比较测试 Question ID: 100011695090 Which of the following tests compares a consumer's preference between two products? <u>Paired preference</u> Ranked preference Hedonic rating Difference from control 题目编号 100011695092 下列何种消费者测试方法可用于了解人们对产品的喜好程度？ <u>喜好度量表评分</u> 三角杯测 偏好排序 偏好对比 Question ID: 100011695092 Which of the following consumer testing methods would be used to discover how well people liked a product? <u>Hedonic rating</u> Triangulation Ranking preference Preferred pair	Alejandra M. Muñoz, Gail Vance Civile, and B. Thomas Carr, <i>Sensory Evaluation In Quality Control</i> (New York: Springer Science+Business Media 1992). Morten Meilgaard, Gail Vance Civile, and B. Thomas Carr, <i>Sensory Evaluation Techniques, 4th Edition</i> (Boca Raton: CRC Press LLC., 2006), Chapter 12.
--	--	--	---	--

		讨论使用于判断重大状况的统计工具。 <i>Discuss statistical tools used to determine significant positions.</i> 认知预算、时间和知识的限制。 <i>Acknowledge limitations in budget, time, and knowledge.</i> 考虑参加大学等级的感官科学课程、聘任 / 咨询专家，及/或购买统计软件。 <i>Consider enrolling in a university level sensory science program, hiring/consulting with an expert, and/or purchasing statistical software.</i> 请学生选择一个情境并设计一种方法，依据他们所在的公司获得消费者 / 客户关于产品或体验的反馈。 <i>Ask the students to select a situation and design an approach to gain consumer/customer feedback on a product or experience within their own company reality.</i>	题目编号 100011695093 何种消费者测试最常被用来测量产品接受度？ <u>喜好度量表评分</u> 偏好对比 偏好排序 剖析 Question ID: 100011695093 Which consumer test is most commonly used to measure product acceptance? <u>Hedonic rating</u> Paired preference Ranking preference Profiling 题目编号 100011695094 下列何者并非可供消费者测试的类型？ <u>对照比较测试</u> 偏好对比 偏好排序 喜好度量表评分 Question ID: 100011695094 Which of the following tests is NOT a type that would likely be given to consumers? <u>Difference from control</u> Paired preference Ranking preference Hedonic rating	
--	--	--	---	--

	2.进行基本消费者测试 Perform basic consumer tests	学员将示范一项偏好对比测试。 Learners will demonstrate a paired preference test.	本主题共一项活动。 请参阅附录 B - 活动准备指南 8 的指示 This topic has an activity. See instruction in 8. Appendix B - Activity Preparation Guide	Harry T. Lawless and Hildegard Heymann, <i>Sensory Evaluation of Food - Principles and Practices, Second Edition</i> , (New York: Springer Science & Business Media, LLC., 2010).
3.11.03 新产品开发 New Product Development	1.在开发新产品时应 用感官测试与结果 Apply sensory testing and use of results when developing new products	在制定新产品测试计划时，应考虑下列事项： When creating a plan to test new products, consider: 哪些分析或感官测试可以提供有用的结果？ What analytical or sensory tests would provide useful results? 由何者进行更为适当，杯测小组还是正式的感官评估小组（包括消费者、受过训练的品鉴者或产品专家）？ Would a cupping group or a more formal sensory panel (of either consumers, trained tasters, or product experts) be appropriate?	题目编号 100011695100 一台新的烘焙机器与旧的机器运转方式不同，且消费者已注意到了该变化。若想确保新、旧机器烘焙出的咖啡拥有相同风味轮廓以及烘焙度，下列哪三种测试最有帮助？ <u>对照比较测试</u> <u>三角杯测</u> <u>颜色光谱分析</u> 氧气分析 Question ID: 100011695100 A new roasting machine operates differently than an old machine and customers have noticed the change. Which three of the following tests would be MOST helpful to ensure that coffee roasted on the new machine has the same flavor profile and roast level as coffees roasted on the old machine? <u>Difference from control</u> <u>Triangulation test</u> <u>Color spectrometry</u> O ₂ analysis	

		应该使用哪种测验问卷或评分量表？ What test questionnaire(s) or rating scale(s) should be used? 应该测试哪些产品？以及如何 进行准备？ What products should we test, and how should we prepare them? 应使用何种分析工具来解释结 果并做出决策？ What analytical tools should we use to interpret results and make decisions?	题目编号 100011695101 某批发业者要求烘焙供货商开发一款混合豆，其感官特性应与该业者目前正在使用的咖啡相同。在设计新的咖啡特性以匹配该客户样本时，下列哪三种测试最有帮助？ <u>对照比较测试</u> <u>三角杯测</u> <u>颜色光谱分析</u> 湿度分析 Question ID: 100011695101 A wholesale customer has asked a roasting company to create a coffee blend that has the same sensory profile as a coffee they are currently using. Which three of the following tests would be MOST helpful when designing new coffee profiles that match the customer's sample? <u>Difference from control</u> <u>Triangulation test</u> <u>Color spectrometry</u> Moisture analysis	
			题目编号 100011695102 某咖啡店经理想在现有的浓缩咖啡菜单中，新增一款与现有牛奶配方一样好喝的替代牛奶。在这种情况下，下列何种测试最有帮助？ <u>消费者测试</u> 进 / 出测试 SCA 描述性评估 三角杯测 Question ID: 100011695102 A café manager wants to add an alternative milk to their espresso beverage menu that is as enjoyable as the original cow milk recipe. Which of the following tests would be MOST useful in this situation? <u>Consumer testing</u> In/out SCA Descriptive Assessment Triangulation test	

			题目编号 100011695103 某咖啡烘焙供货商正收到了旗下产品味道太过雷同的申诉。业者希望修正他们的产品品项，以增加风味轮廓的多样性。下列哪两种感官测试最有帮助？ <u>风味轮廓法</u> <u>三角杯测</u> 进 / 出测试 合格 / 不合格 Question ID: 100011695103 A coffee roasting company is receiving complaints that their offerings taste too much alike. The company would like to revise their product list to offer greater diversity in flavor profiles. Which two sensory tests would be MOST helpful during this project? <u>Flavor profile method</u> <u>Triangulation test</u> In/Out Pass/Fail	
--	--	--	---	--

			题目编号 100011695104 某咖啡店负责人要求咖啡供货商开发一款新的配方豆，将用于所有营业据点作为一款受欢迎的冷萃咖啡饮品。咖啡店负责人希望该款咖啡具有显著的花香以及蓝莓风味特性。下列哪两种感官测试最有帮助？ <u>风味轮廓法</u> <u>消费者测试</u> 进 / 出测试 三角杯测 Question ID: 100011695104 A café owner has asked his coffee supplier to create a new blend profile for use in a popular cold brew coffee beverage in all their locations. The café owner would like for the coffee to have a notable floral and berry flavor profile. Which two sensory tests would be MOST helpful during this project? <u>Flavor profile method</u> <u>Consumer testing</u> In/Out Triangulation test	
3.11.04 感官测试设计的计划 Plan for Sensory Testing Design	1. 制定一项感官测试计划以支持新的产品开发。 Develop a plan for sensory testing to support new product development		本主题共一项活动。 请参阅附录 B - 活动准备指南 8 的指示 This topic has an activity. See instruction in 8. Appendix B - Activity Preparation Guide

7. 附录 Appendices

附录 A：重要术语 Appendix A: Key Terminology

名词 Term	说明* Description*
酸质 Acidity	由咖啡唤起的酸味感知，在强度与特征上可能有所不同。 The perception of sour taste provoked by the brew, which may vary in intensity and character.
余韵 Aftertaste	在口中和喉咙残留的咖啡成分所引起的感知，包含味道与鼻后嗅觉。在咖啡被吐掉或吞咽之后，大脑将这些不同的感官输入结合，形成一个整体印象。 The perception coming from both the taste and the retronasal olfactory component caused by the remnants of the brew inside the mouth and throat, after the brew has been ejected or swallowed. It is perceived as a single impression, as the brain combines the different sensory inputs.

湿香 Aroma	在加入热水开始冲煮咖啡后，与破除咖啡浮渣时，进行评估的鼻前嗅觉感知（咖啡的香气）。 The orthonasal olfactory perception of the coffee brew, assessed right after brewing and while the crust is broken (the smell of the brew).
涩感 Astringent	余韵感受在口中持续的干涩感觉。 An aftertaste sensation consistent with a dry feeling in the mouth.
属性 Attribute	被视为咖啡特征或固有部分的质量或特性。用于感官评估时，属性是若干感官类别（湿香、干香、风味、余韵、酸质、甜味以及口感）中的叙述词。这些类别可在评估咖啡时用于分析以及评分。 A quality or feature regarded as a characteristic or inherent part of a coffee. For the purpose of sensory assessment, an attribute is a descriptor within a number of defined categories (aroma, fragrance, flavor, aftertaste, acidity, sweetness, and mouthfeel) of sensation that are analyzed and rated when assessing a coffee.
基本味道 Basic Tastes	甜、酸、苦、咸及鲜等五种基本味道。 The five basic tastes of sweet, sour, bitter, salty and umami.
破渣 Break	搅拌咖啡液中「咖啡浮渣」或「圆顶」（通常在萃取过程中形成于杯子顶层）的行为，为准备啜吸的步骤之一。 The act of stirring the “crust” or “dome” of coffee slurry usually formed on the top of the cup during brewing, as one of the steps to ready the cup for liquoring.
咖啡浮渣 Crust	萃取后立即在咖啡表层形成的一层湿咖啡粉，破除后可评估咖啡的湿香。 The layer of wet coffee grounds that forms on the top of the brew surface immediately after brewing. This crust is broken to evaluate the coffee aroma.
杯测 Cupping	一种对咖啡进行感官评估的方法，每款咖啡样本会准备数杯，每杯咖啡豆独立研磨并冲泡，然后对每杯咖啡样本品尝数次。 A method for the sensory assessment of coffee, which involves tasting several cups per coffee sample, using a different set of coffee beans for each cup, which is ground and brewed independently.
杯测杯 / 碗 Cupping Glasses/ Bowls	用于杯测咖啡的玻璃或陶瓷容器，容量在 200 毫升至 350 毫升之间。 Tempered glass or ceramic vessels between 200 mL and 350 mL used for cupping between 200 mL and 350 mL.
杯测研磨 Cupping Grind	较滤纸研磨稍粗的研磨度，约有 70% 到 75% 的咖啡粉能通过 850μm 或美国 20 号筛网。 A grind that is coarser than a paper filter grind with 70% to 75% passing through a 850μm or US Size 20 sieve.
描述性测试 Descriptive Test	描述性测试是一种量化的感官测试，旨在对产品所有感知感官属性进行描述和分析。 A descriptive test is a quantitative sensory test that seeks to profile a product on all its perceived sensory attributes.
差别测试 Difference Test	差别（区别性）测试是一种感官测试，用于辨别样本之间是否存在差异（或没有差异）。 A difference (discriminative) test is a sensory test that identifies whether there is a difference (or not) between samples.

对照比较测试 Difference From Control Test	一种差别测试，由品鉴者评估样本与标准或对照产品的整体差异程度，并对样本评分。 A difference test in which the taster rates a sample on the overall degree of difference from a standard or control product.
二选一测试 Duo-Trio Test	一种差别测试，品鉴者会收到一个参考样本和两个已编号的样本，品鉴者必须选出与参考样本最相似者。选择正确答案的机率为 50%。 A difference test in which the taster receives one reference sample and two coded samples. The taster must choose the sample most similar to the reference. The probability of choosing a correct answer by chance is 50%.
风味 Flavor	来自咖啡的味道和咖啡在口中时的鼻后嗅觉感知。脑部将不同的感官输入结合起来，被感知为一种单一「风味」印象。 The perception coming from both the taste of the brew and the brew's retronasal olfactory component, while the brew is in the mouth. It is perceived as a single "flavor" impression, as the brain combines the different sensory inputs.
干香 Fragrance	在咖啡冲泡之前，对咖啡粉的鼻前嗅觉感知。 The orthonasal olfactory perception of the coffee grounds prior to brewing (the smell of the coffee grounds.)
味觉 Gustation	品尝味道的感知，就像「视觉」代表视力的感知，以及「嗅觉」代表气味的感知。味觉主要的生理结构是一组味蕾。 The sense of taste, just as "visual" refers to the sense of sight and "olfactory" to the sense of smell. The main physiological structure of the sense of taste is the set of tastebuds.
进 / 出测试 In/Out Test	一种差别测试，由品鉴者比较样本与已建立的标准，判断样本是否符合指定标准，又称为合格 / 不合格测试。 A difference test in which the taster compares a sample to an established standard to determine whether the sample meets or does not meet specified criteria. This is also known as a pass/fail test.
口感 Mouthfeel	当咖啡在口中时的触觉感知，不包含温度感知。口感包括：咖啡的重量感、黏稠度、质地、以及其它触觉特性，例如涩感（口腔干涩感）。 The tactile perception of the brew while it is in the mouth, excluding the temperature perception. It encompasses the brew's weight and viscosity, its texture, and other tactile properties such as astringency (mouth-drying property).
嗅觉 Olfactory	与气味的感知有关。人类嗅觉系统由鼻子、鼻腔，以及大脑中的「嗅球」所组成，嗅球负责处理鼻腔内覆盖的嗅觉感受器的讯息。 Relating to the sense of smell. The human olfactory system consists of the nose, the nasal cavities, and the "olfactory bulb" in the brain, which processes information from the olfactory receptors lining the nasal cavities.
p 值 P-Value	当您进行统计学中的假设检验时，p 值（经计算得出的概率）有助于判断结果的显著性。通常落于 0 到 1 的范围内。 When you perform a hypothesis test in statistics, a p-value, or calculated probability, helps you determine the significance of your results. It falls within a scale of 0-1.
感官评估小组 Sensory Panel	感官小组是受过培训、校正的团体，能够客观地描述样本之间的差异性。 A sensory panel is a trained, calibrated group that can objectively describe differences between samples.

三角杯测 Triangulation Test	三角杯测是一种区别性的测试方法，品尝者必须在三个一组的样本中，辨别出那个不同或最明显不同的样本。 A triangulation (or triangle) test is a discriminative test method in which the taster identifies the odd/most significantly different sample in a set of three samples.
三合一 Triad	三个一组的样本，用于三角杯测。 The individual set of three samples used in a triangulation test.

*这些术语的参考数据已列入课程内容。References for these terms are listed within the context of the curriculum.

附录 B：活动准备指南 Appendix B: Activity Preparation Guide

编码 Code	指示 Instructions
3.03.01 基于心理的偏见 Psychologically Based Biases	使用名词与定义闪卡介绍感官心理学因素。 Use flashcards with terms and definitions for sensory psychological factors. 学员团体以闪卡进行配对游戏。 Groups of learners play matching games with the flashcards.
3.04.03 应用 WCR 辞典与风味轮 Applying the WCR Lexicon and Flavor Wheel	AST 准备至少六种来自咖啡风味轮参照物的六杯萃取（批量冲泡或手冲）咖啡，每杯咖啡的风味轮廓应清楚地与参照物相应，请使用多个产地和不同处理方法。 The AST prepares six brewed (batch or manual) coffees that represent at least six references from the Coffee Taster's Flavor Wheel. The flavor profile of each coffee should clearly demonstrate the appropriate reference. Use a variety of origins and processing methods. 这是一项盲测评估 - AST 可以在本活动完成后揭晓每杯咖啡的产地以及处理方法。 This is a blind assessment – the AST can reveal the origins and processing methods of each coffee after the activity is complete. 范例 Example: - 果香（莓果）- 衣索匹亚 日晒 Fruity (Berry) – Ethiopia Natural - 花香（红茶）- 衣索匹亚 水洗 Floral (Black Tea) – Ethiopia Washed - 甜度（黄糖）- 哥斯达黎加 蜜处理 Sweet (Brown Sugar) – Costa Rica Honey - 坚果 / 可可（坚果）- 巴西 日晒 Nutty/Cocoa (Nutty) – Brazil Natural - 辛香料（香料）- 苏门答腊 Spices (Brown Spice) – Sumatra - 烘焙（烟熏）- 深焙巴西 日晒 Roasted (Smoky) – Dark Roasted Brazil Natural

3.05.01
酸质与苦味的强度
评比
Ranking Acidity and
Bitterness Intensity

第 1 部分 酸质的强度 Part I - Intensity of Acidity

AST 应准备四种代表不同酸质强度的溶液，并编码以供评估。

AST should prepare four solutions representing different acidity intensities, coded for assessment.

- 所有溶液在添加不同程度的柠檬酸前，应包含下列：

All solutions should include the following, before adding differing levels of citric acid:

- 水
Water
- 固定苦度（咖啡因* 0.3 克 / 公升）
Fixed bitterness (0.3 g/L caffeine*)
- 固定甜度（蔗糖 0.6 克 / 公升）
Fixed sweetness (6 g/L sucrose)

样本 SAMPLES	调配比例 RATIO
最酸 MOST ACIDIC	0.6 克 / 公升（柠檬酸） 0.6 g/L (citric acid)
第 2 酸 2nd MOST ACIDIC	0.3 克 / 公升 0.3 g/L
第 3 酸 3rd MOST ACIDIC	0.15 克 / 公升 0.15 g/L
最不酸 LEAST ACIDIC	0.08 克 / 公升 0.08 g/L

学员将评估各编码的样本，要求学员指出除了酸味 / 酸质以及苦度（甜度），还存在哪些其它口感，然后学员应按照最不酸到最酸的顺序，为这些样本进行排名。Learners will assess each coded sample. Ask learners to name the other taste sensation present in addition to sourness/acidic and bitterness (sweetness). Learners should then rank the samples in order from the least acidic to the most acidic.

第2部分 苦味的强度 Part II - Intensity of Bitterness

AST 应准备四种代表不同苦度的溶液，并编码以供评估。

AST should prepare four solutions representing different bitterness intensities, coded for assessment.

- 所有溶液在添加不同程度的咖啡因*前，应包含下列：
 - All solutions should include the following, before adding differing levels of caffeine*:
 - 水
Water
 - 固定酸质（0.2 克 / 公升柠檬酸）
Fixed acidity (0.2 g/L citric acid)
 - 固定甜度（蔗糖 0.6 克 / 公升）
Fixed sweetness (6 g/L sucrose)

样本 SAMPLES	调配比例 RATIO
最苦 MOST BITTER	0.8 克 / 公升（咖啡因*） 0.8 g/L (caffeine*)
第 2 苦 2nd MOST BITTER	0.4 克 / 公升 0.4 g/L
第 3 苦 3rd MOST BITTER	0.2 克 / 公升 0.2 g/L
最不苦 LEAST BITTER	0.1 克 / 公升 0.1 g/L

学员将评估各编码的样本，并按照最不苦到最苦的顺序进行排名。

Learners will assess each coded sample and rank the samples in order from the least bitter to the most bitter.

*请注意：在添加咖啡因时应注意（高剂量咖啡因具毒性）。尽管这些材料大多可在超市、杂货店或在线购买，AST 可能还是需要透过学校 / 实验室名义，向供货商登记以取得咖啡因。

*Note: Use caution when dosing caffeine (it is toxic in high quantities). While most of these materials can be obtained at a supermarket, grocery store, or online, the AST may need to register with a laboratory supplier as a school/laboratory to obtain caffeine.

3.05.02
甜度评比
Ranking Sweetness
Intensity

第 1 部分 甜味的强度 Part I – Intensity of Sweetness

AST 应准备四种代表不同甜度的溶液，并编码以供评估。

AST should prepare four solutions representing different sweetness intensities, coded for assessment.

- 所有溶液在添加不同程度的蔗糖（粗砂糖）前，应包含下列：
 - All solutions should include the following, before adding differing levels of sucrose (granulated sugar):
 - 水
Water
 - 固定酸质（0.2 克 / 公升柠檬酸）
Fixed acidity (0.2 g/L citric acid)

样本 SAMPLES	比率 RATIO
最甜 MOST SWEET	35 克 / 公升（粗砂糖） 35 g/L (granulated sugar)
第 2 甜 2nd MOST SWEET	20 克 / 公升 20 g/L
第 3 甜 3rd MOST SWEET	10 克 / 公升 10 g/L
最不甜 LEAST SWEET	5 克 / 公升 5 g/L

学员将评估各编码的样本，并按照最不甜到最甜的顺序进行排名。

Learners will assess each coded sample and rank the samples in order from the least sweet to the most sweet.

3.05.03 咖啡的应用 Applied to Coffee	AST 可自行选择冲泡方式来制作三种咖啡，这些咖啡的酸质、甜度以及苦味需有显著差异，可以使用任何产地或处理方法。AST 亦可选择在本活动使用活动 3.04.03 的咖啡。 AST should brew three coffees using a method of their choice. The coffees should have distinct differences in intensity of acidity, sweetness, and bitterness. Any origin or processing method can be used. If they choose, the AST can feature the coffees from Activity 3.04.03 in this activity. 这是一项盲测评估 - AST 可以在本活动完成后揭晓每杯咖啡的产地以及后制处理方法。 This is a blind assessment – the AST can reveal the origins and processing methods of each coffee after the activity is complete. 学员将： Learners will: - 按照酸质的强度对这三款咖啡进行排名（由最低到最高）。 - Rank intensity of acidity between the three coffees (from lowest to highest). - 按照苦味的强度对这三款咖啡进行排名（由最低到最高）。 - Rank intensity of bitterness between the three coffees (from lowest to highest). - 按照甜度的强度对这三款咖啡进行排名（由最低到最高）。 - Rank intensity of sweetness between the three coffees (from lowest to highest). - 判断各杯咖啡的酸质是否为干的（草本、草味、酸涩）或甜的（多汁、果香、明亮）。 - Determine whether the acidity of each coffee is dry (herby, grassy, tart) or sweet (juicy, fruit-like, bright). AST 可以鼓励学员在本活动使用 15 分制强度评分量表。AST 在与学员讨论结果时，也可以参考 15 分制强度评分量表，例如：「这种酸度为低强度（0 到 5）、中强度（5 到 10），或高强度（10 到 15）？」 ASTs can encourage learners to use 15-point intensity scales during the activity. The AST can also reference the 15-point intensity scale when discussing results with learners. Example: “Is this acidity low intensity (0-5), medium intensity (5-10), or high intensity (10-15)?”
---	---

3.06.01
口感
Mouthfeel

第 1 部分 - 评估咖啡不同口感强度 Part I – Evaluate Different Mouthfeel Intensities of Coffee

AST 应使用一款咖啡豆制作三批相同的咖啡（任何产地或处理法皆可）。

AST should brew three identical batches of one coffee (any origin or processing method).

1. 为每一批咖啡标记一个三位数编码。

Label each batch of coffee with a three-digit code.

2. 制作三组样本，在每个样本杯上标记上述任一三位数编码。

Create three sets of cups. Label the cups in each set with one of the three-digit codes.

3. 使用以下的配方在三个咖啡批次中添加增稠剂（在大多数药房中可以找到，例如，雀巢营养资源 Thickenup Clear）。

Add thickening agent (found in most pharmacies, e.g., Nestle Nutrition Resource Thickenup Clear) to the batches of coffee using the following recipes.

第 1 批次 Batch 1	不添加增稠剂（只有咖啡） No thickener added (just coffee)
第 2 批次 Batch 2	增加 1 克 / 公升 Add 1 g/L
第 3 批次 Batch 3	增加 3 克 / 公升 Add 3 g/L

4. 确定咖啡与增稠剂充分混合。

Make sure the coffee and thickening agent are well mixed.

5. 以适当的杯子提供带有编码的咖啡（每位学员每个样本皆各有一杯）。

Serve the coded coffee in the appropriate cups (each learner receives one cup of each sample).

学员将评估各样本的口感，并按口感强度由轻盈到厚实（最不浓到最浓）进行排序。

Learners will evaluate the mouthfeel of each sample and rank mouthfeel intensity from lightest (least intense) to heaviest (most intense).

AST 接着检视答案，并讨论口感强度的变化如何影响风味以及质量感知。

AST then reviews the answers and discusses how the change in mouthfeel intensity impacted flavor and perception of quality.

第 2 部分 - 评估常见的口感 Part II – Assess Common Mouthfeel

AST 应准备三种具有咖啡常见口感感知的溶液：

AST should prepare three solutions with the common mouthfeel sensations found in coffee:

	- 金属味 Metallic - 油滑味 Oily - 口腔干涩 (涩味) Mouth Drying / Astringent - 参照物用品以及准备指示可参考 WCR 感官辞典。Refer to the WCR Sensory Lexicon for reference supplies and preparation instructions. 学员将评估该溶液，并注意他们体验到的各种口感。Learners will assess the solutions, noting how they experience each mouthfeel sensation.
3.07.01 属性的感知 Perceptions of Attributes	- 要求学员填写一份属性感知的问卷，了解他们对各种咖啡中的描述性属性的质量印象。 Ask each learner to fill out a Perceptions of Attributes Questionnaire that captures their impressions of quality on various descriptive attributes in coffee. - 讨论并记录在品评方面的共识点，探索意见分歧的原因，并与精品咖啡的属性定义和情感性评估连结，后者允许不同的质量印象。 Discuss and note areas of consensus, exploring reasons for differences of opinion. Connect this to the importance of the attributes definition of specialty coffee and affective assessment, which allows for different impressions of quality.
3.07.02 SCA 情感性评估 SCA Affective Assessment	设置至少一桌包括六款咖啡的盲测，呈现各种不同的风味和属性强度。应安排来自非洲、美洲以及印度尼西亚 / 东南亚的各种咖啡，咖啡的后制处理方法也应有所不同。 Set at least one blind table of six coffees that display a diversity of flavors and attribute intensities. The table should showcase a variety of coffees from Africa, the Americas, and Indonesia/Southeast Asia. Coffees should vary in processing method. 如咖啡价值评估规范中所述，AST 应使用杯测法（五杯样本组合）。AST 可邀请学员协助设置杯测。 As outlined in the Coffee Value Assessment Protocol, the AST should use the cupping method (five-cup sample sets). The AST can invite learners to assist with setting up the cupping. 学员使用 SCA 情感性评估表，并对所有样本进行情感性评估。 Learners use the SCA Affective Form and complete Affective Assessments for all samples. 在讨论结果时，应说明情感性评估测量属个人喜好或对质量的印象。因此，除非杯测者寻求与特定市场偏好一致，否则不需要进行校正。 When discussing results, point out that affective assessments measure individual liking or impression of quality. Therefore, calibration is not desirable unless the cupper seeks to align with a specific market preference. AST 亦可以安排一个或多个不一致或有瑕疵的样本，以利学员获得使用 SCA 情感性评估表最下方不一致与瑕疵评分区块的实际经验。 If they choose, the AST can introduce one or more non-uniform or defective cups to the assessment so that learners can gain experience using the uniformity and defect sections at the bottom of the SCA Affective Form.

3.07.03
瑕疵、走味与烘焙
问题
Defects, Staling,
and Roasting
Problems

AST 在感官专业实操测验中，应准备可以反映瑕疵、走味，与烘焙问题特征的样本。AST 也可以纳入与冲煮有关的负面风味（萃取不足与过度的咖啡）。AST should prepare samples that reflect the defects, staling, and roasting problems featured in the Sensory Professional Practical Exam. If they choose, the AST may also include negative flavors associated with brewing (under- and over-extracted coffees).

表格 1 Table 1:

- 自 FlavorActiv 公司所出的 Coffee Library 中选择六种负面 / 瑕疵参照物，并进行编码。
Choose six negative/defect references from the FlavorActiv Coffee Library, blindly coded for assessment.
- 将一颗 FlavorActiv 的风味胶囊与 500 毫升的冲泡咖啡混合，以制作参照物。
Mix one capsule of FlavorActiv with 500 mL of brewed coffee to create the references.
- 品尝加入 FlavorActiv 胶囊的咖啡与干净的控制杯
Taste the FlavorActiv cups against the clean control cups.
- 本活动控制杯应为风味温和的无瑕疵咖啡。
The control coffee for this activity should be mild and uniform with no defects.

请注意：本活动学员不需有辨识样本的经验，在活动之前，AST 应口头指导学员，说明各种风味的样貌。

Note: Learners are not expected to have experience on identifying the samples of this activity. Before the activity, ASTs should provide verbal guidance to learners on what to expect from each flavor.

- 表格 / 参照物范例 Table/Reference Example:

表格 1	A	B	FlavorActiv
第 1 组	控制组 风味温和的水洗法咖啡 Control, washed mild	酚类 Phenol	药味的（邻甲酚）或酚类 Medicinal, (O-Cresol) or Phenol
第 2 组		霉味 Mold	霉味的 / 潮湿（2,4,6-三氯苯甲醚）Mouldy/Damp (2,4,6 Trichloroanisole)
第 3 组		马铃薯 Potato	生马铃薯（2-异丙基-3-甲氧基吡嗪）Raw Potato (2-Isopropyl-3-Methoxypyrazine)
第 4 组		负面的，与走味相关的无瑕疵风味（纸板）Negative, non-defective flavor associated with staling (cardboard)	纸 Paper
第 5 组			
第 6 组			

请注意：FlavorActiv 胶囊为本活动建议的感官参照物。如果 AST 无法取得这些胶囊，得以使用具有相同属性的生豆或烘焙咖啡。

Note: FlavorActiv capsules are the recommended sensory references for this activity. If unable to source these capsules, the AST may source green or roasted coffees that exhibit the same attributes.

表格 2 Table 2:

- 请遵循下表所列的指示来准备样本。Follow instructions listed in the table below to prepare the samples.
- 可以使用杯测或大量冲泡的方式来准备样本。Samples can be prepared by cupping or batch brew.

表格 2 TABLE 2	A	B	样本的规格 Specifications for Samples
第 1 组 Set 1	控制组 风味温和的水洗法咖啡 Control, washed mild (控制组的咖啡烘焙程度 = 杯测标准) (control roast = cupping standard)	走味 Stale	久放走味 / 腐臭味的样本 (已研磨的咖啡粉存放在未密封的包装里超过 2 个月以上) Aged stale/rancid sample (pre-grounded coffee storage on unsealed packed for 2+ months)
第 2 组 Set 2		过度萃取 Over-extracted	萃取率超过 22% More than 22% extraction yield
第 3 组 Set 3		萃取不足 Under-extracted	萃取率低于 18% Less than 18% extraction yield
第 4 组 Set 4		烧焦 / 超过预期的焙度 Burnt / darker than expected	烘焙过度发展 (Agtron 值超过 35) Overdeveloped (35+ Agtron)
第 5 组 Set 5		烘焙发展不足 Under-developed	烘焙发展不足 (Agtron 值超过 100) Underdeveloped (100+ Agtron)
第 6 组 Set 6		焙烤的 Baked	焙烤的 (与控制杯的颜色接近，但发展期较长) Baked (close to same color as control but elongated RD)

学员将品鉴与辨识与烘焙、走味或冲煮有关的瑕疵或负面风味的咖啡。

Learners will taste and identify the cups that contain defects or negative flavors associated with roasting, staling, or brewing.

3.08.01
感官描述性剖析基
础
Sensory Descriptive
Profiling Basics

第 1 部分 - 生成描述性词汇 (第 1 天) Part I – Generating the Vocabulary (Day 1)

AST 应准备下列物品：AST should prepare the following:

- 四种显著不同的咖啡样本，例如：
 Four noticeably different coffee beverage samples. Examples:
 - 四款现成的即饮冰咖啡，或
 Four ready to drink cold coffee products, OR
 - 四款不同的替代 / 非乳制饮品，将非乳制奶类（例如杏仁、黄豆、椰子、燕麦等）与热咖啡依一定比例混合制成。
 Four different alternative/non-dairy milk beverages made by mixing non-dairy milk (like almond, soy, coconut, oat, etc.) with a brewed coffee using a consistent ratio.
- 将样本以三位数字进行编码，再以盲测方式呈现给学员。
 Code the samples for assessment using three-digit codes. Present the samples blind to learners.

请学员使用个人的描述语，为每款样本生成详尽的词汇。

Using their own words, learners will generate an exhaustive vocabulary for each sample.

接着 AST 应该：AST should then:

- 收集每位学员的描述语：
 Collect the sample terms from each learner:
 - 去除所有主观性描述词（指出质量印象的描述词）
 Remove all qualitative descriptors (those that indicate an impression of quality).
 - 分组讨论决定哪些描述语是多余的，可以进行小组重组。
 Decide as a group which terms are redundant and can be re-grouped.
 - 分组讨论哪些描述语最适合描述样本，并于达成共识后去除无法取得共识的描述语。
 Decide as a group which terms bring consensus to describe the samples best; remove the terms not finding consensus.
 - 为每个样本选出 5 到 7 个描述语，并给出明确的定义和参照物。
 Select 5-7 terms for each sample and give clear definition and reference to each.
- 准备一份描述性剖析问卷。例如，每杯咖啡一页，每种属性有一个线性强度量表（0 到 15）。
 Prepare a descriptive profiling questionnaire sheet. For example, one page for each coffee with one linear intensity scale (0 to 15) for each attribute.
- 为每个样本提供与样本数量相同的描述性剖析问卷给学员。
 Give learners as many profiling questionnaire sheets as samples to evaluate.

第 2 部分 - 校正与生成描述性概要 (第 2 天) Part II – Calibrating and Generating a Descriptive Profile (Day 2)

AST 应准备下列物品：AST should prepare the following:

- 相同的咖啡饮品 (与第 1 部分相同) · 使用不同的三位数编码
Same coffee beverages (from Part I) with different three-digit codes
- 按顺序呈现样本 (与第 1 部分顺序相同, 以便学员更易理解)
Present samples, one after the other (same order of Part I presentation to make it easier for learners)
- 请学员以线性量表 (0 到 15) 评级每个样本的各个属性
Ask learners to rate individual attributes for each sample on a linear scale (0 to 15)
- 收集并整理每位学员的数据。
Collect and collate the data from each learner.
- 分析并评论每个属性的评分分布情形 (例如, 与各属性的分散程度相较的一致性)。
Analyze and comment on spread of ratings (ex. alignment compared to dispersion for each attribute).
 - 指示说明: 为此需要进行两种计算: 标准偏差与平均值。将所有分数输入到电子表格中 (Google Sheets、Excel 等), 使用标准偏差函数 =STDEV, 选取要计算的所有分数, 将标准偏差四舍五入到最接近的整数 (例如, $1.75 = 2$, $2.35 = 3$)。使用平均函数 =AVG 或 =Average, 找到各属性的小组平均分数, 并将其四舍五入到最接近的整数。AST 现在可以使用平均值加或减标准偏差, 来设定可接受范围 (例如, 若平均值为 7 而标准偏差为 2, 则评分在 5 到 9 之间的学员就是已校正的)。
Instruction: To do so, two calculations will need to be done: the standard deviation and the average. Input all scores into a spreadsheet (google sheets, excel, etc.). Using the standard deviation function =STDEV highlight all scores to be calculated. Round up the standard deviation to the nearest whole number (i.e. $1.75 = 2$, $2.35 = 3$). Using the average function =AVG or =Average, find the group's average score for each attribute and round this to the nearest whole number. The AST now sets the range of acceptability by using the average plus or minus the standard deviation (i.e. if 7 is the average and 2 is the standard deviation, any learner that scores the attribute from 5-9 is calibrated).
- 从校正品鉴结果中, 预测哪些属性已充分校正且足以生成描述性概要, 而哪些属性仍需进一步校正。如果标准偏差为 4 或更多, 则需要进一步的校正 (在这些案例中, 样本规模可能太小或品鉴者需要在特定属性上重新校正)。
From the calibration tasting results, predict which attributes are sufficiently calibrated for the descriptive profile and which ones need further calibration. If the standard deviation is 4 or greater, further calibration needs to occur (in these cases, the sample size could be too small or the tasters need to recalibrate on specific attributes).
- 与学员讨论何时评估小组组长可以删除过于异常的评分。
Discuss with learners when the panel leader may choose to remove odd ratings.

请注意: 向学员解释在现实情况中, 此过程可能需要多次的杯测会才能达到一致性 / 校正。

Note: Explain to the learners that in the real world this process may take many sessions to find an alignment / calibration.

3.09.03 SCA 描述性评估 SCA Descriptive Assessment	第 1 部分 - 参照物组 Part I - Reference Set AST 应准备一款水洗咖啡豆（来自任何产地）作为参照物。如咖啡价值评估规范所述，AST 可使用杯测法（五杯样本组合）或批量冲煮来准备样本。 AST prepares a washed coffee (from any region) as a reference. As outlined in the Coffee Value Assessment Protocol, the AST may use the cupping method (five-cup sample sets) OR batch brewing to prepare the sample. 学员将盲测并评估该参照咖啡，使用 SCA 叙述性评估表记录。 Learners will taste and evaluate the reference coffee blindly, using the SCA Descriptive Form to document notes. 活动结束后，每个人应分享他们对每个属性的强度评分，并透过讨论至少对各属性的一般强度「范围」达成共识（例如，是在 0 到 5 之间、5 到 10 之间，或 10 到 15 之间？），每个人也应分享他们的选择合适选项（CATA）的结果，并且在一般风味上达成共识。 After the activity is complete, everyone should share their intensity ratings for each attribute and, through discussion, reach consensus on at least the general “range” of intensity for each attribute (ex. Is it between 0 and 5, between 5 and 10, or between 10 and 15?) Everyone should also share their check all that apply (CATA) findings and align on general flavors. 第 2 部分 - 描述性评估 Part II – Descriptive Assessment AST 应准备一桌包含六款咖啡的杯测，使用与第 1 部分相同的准备方法。 AST should prepare a set table that includes six coffees. Use the same preparation method used in Part I. - 一杯为重新编码的参照咖啡。 One coffee should be the reference coffee, recoded. - 一杯有些许显著的感官属性（任何产地 / 处理方法）。 One coffee should have few distinctive sensory attributes (any origin/processing method). - 四杯有较多显著的感官属性（使用各式各样产地 / 处理方法）。 Four coffees should have more distinctive sensory attributes (use a variety of origins/processing methods). 学员将盲测并评估六款咖啡，使用 SCA 描述性评估表记录。 Learners will taste and evaluate all six coffees blindly, using the SCA Descriptive Form to document notes. 练习结束后接着进行讨论，比较学员的 CATA 结果与强度分数，揭晓每款咖啡的产地与处理方法。学员可以透过查看他们在第 1 部分与第 2 部分对参照咖啡的强度评分与 CATA 结果，来评估个人的一致性，这些结果应为相似或相同的。 The exercise is followed with another debriefing discussion comparing learners’ CATA results and intensity scores. Reveal the origin and processing method for each coffee. Learners can evaluate their consistency by looking at their intensity ratings and CATA results for the reference coffee in Parts I and II. The results should be similar or identical.
--	---

3.11.02 进行基本消费者测试 Perform Basic Consumer Tests	AST 自行选择冲煮方式，准备两款咖啡（任何产地、处理法）并为其编码以供评估，在不同的站点以随机顺序向学员呈现这些咖啡。 Using a brew method of their choice, the AST prepares two coffees (any origin, processing method) and code them for assessment. Present the coffees to learners in a random order at separate stations. 学员将品鉴这两款样本，并且辨识他们偏好哪款咖啡。 Learners will taste both samples and identify which coffee they prefer. 收集小组的结果，并与三角杯测统计表比较。若「N 值」太低，AST 应提供一个理论上的范例。 Collect the group's results and compare to the Triangulation Test Statistics Table. If the 'n value' is too low, AST should give a theoretical example.
---	---

3.11.04 感官测试设计计划 Plan for Sensory Testing Design	AST 将学员分组，并给予各组设定一种情境（详见下列范例）。学员将设计一个感官测试设计计划，以提供数据来协助解决问题。 AST divides learners into groups and give each group a scenario (see examples below). Learners then design a plan for a sensory test that provides data to help address the issue. 范例：Examples: - 新烘焙师表现不如前者，而我的客户也已注意到了这个变化，我该如何重现相同的咖啡风味呢？ My new roaster does not perform like the old one and my customers have noticed the change. How do I recreate the same coffee profiles? - 我在朋友店内品尝了一杯质量令人印象深刻的咖啡，所以我向该进口商购买了相同的咖啡生豆。但是，交由我的烘豆师进行烘焙之后，风味品尝起来不太一样，该如何制作出相同的风味呢？ I tasted a coffee at a friend's business and was so impressed with the quality that I purchased the same coffee from the importer. When I roasted it in my roastery, it did not taste the same. How can I create similar results? - 我供应的咖啡风味太过于相似了，该如何进行多样化调整呢？ The coffees I am offering taste too much alike. How do I diversify? - 客户抱怨我的咖啡太苦了，该如何进行修正呢？ My customers complain that my coffees are too bitter. How can I correct this? 学员将制定计划，包括：Learners should create plans that include: - 明确陈述的目标 A clearly stated objective - 最适合该情境的测试类型以及原因 The type of test that is best for the scenario and why - 最适合该情境的评估小组类型以及原因 The type of panel that is best for the scenario and why - 一份测试问卷的基本初稿，包含任何评分量表 A basic sketch of a test questionnaire, including any rating scales - 测试何种咖啡 / 产品以及如何准备的提案 A proposal of what coffees/products to test and how to prepare them - 用以诠释和做决策所使用的分析工具类型 The type of analytical tools to use for interpretation and making decisions
--	--

附录 C：心理偏见错误 Appendix C: Psychological Bias Errors

心理学的因素 Psychological Factor	说明 Description	范例 Example	建议的行动 Recommended Action	页* Page*
联想 Association	当遇到相同刺激时，心理尝试将感知与先前的经验连结。 The mind tries to relate the perception to a previous experience when the same stimulus was encountered.	对一个人而言，肉桂可能联想起牙膏，而另一个人则想到苹果派。 Cinnamon may remind one person of toothpaste, while another thinks of apple pie.		p.31
预期效应 Expectation	当一位评估员预期会发现差异，并受到与感官体验无关的讯息影响。 When an assessor expects to find a difference and is influenced by information that is extraneous to the sensory experience.	代码 A 或 1 或「nb」四舍五入后为 100 和 450 之间的数值，可能与较高的评分相关联。看到生豆或知道咖啡的产地可能影响您的判断（例如，牙买加蓝山咖啡 vs. 巴西咖啡）。 Code A or #1 or round 'nb' 100, 450 can be associated with higher scores. Seeing the green beans or knowing the origin can influence your judgement (e.g., Jamaican Blue Mountain vs. Brazilian coffee).	最小化此错误的最佳方式为避免分享可能产生偏见的信息。 The best way to minimize this error is to avoid sharing information that may create bias.	p.32
逻辑 Logical	当评估员相信两个或多个属性在逻辑上相互关联。 When an assessor believes that two or more attributes are logically linked.	给予较深的颜色较高的强度评分。 A darker color will be assigned higher intensities.	训练将有助于品鉴者克服这种偏见。 Training will help tasters overcome this.	p.32

月晕效应 Halo Effect	对某一属性进行评分时所做的判断可能会影响其它评分，当询问有关产品质量的多个问题时，回答可能不会完全独立。 The judgement made when rating one attribute may influence other ratings. When more than one question is being asked about the quality of a product, responses may not be completely independent.	在进行情感性评估时，品鉴者将咖啡的香气评分为「9」，接着品鉴者可能会倾向给其它属性高分。 When conducting an affective assessment, the taster rates the aroma of a coffee as '9.' The taster may then be inclined to assign high ratings to the other attributes as well.	将测试限制在单一问题或属性上可以解决这个问题，同时也可以透过培训评估小组的方式来克服这种情况。 Limit the test to one question or attribute. This can also be overcome with panel training.	p.32
排序效应 Presentation Order Effect	前面的样本可能会影响接续样本的评分。 The preceding sample can affect the scoring of the following sample.	在品鉴了深焙的咖啡后，可能会觉得中度烘焙的咖啡非常酸。 A medium roast will seem very acidic after tasting a dark roast.	应保持呈现顺序为均衡且随机的，以确保每种可能的顺序组合都以相同的次数呈现。 The presentation order should be balanced and randomized, so that each of the possible order combinations is presented an equal number of times.	p.32
偏袒宽容 Leniency	品鉴者给出他们认为会让评估小组组长满意的分数。 Tasters give scores they think will make the panel leader happy.	随着为新的客户开发新产品的期限届至，备感压力的评估小组组长向成员们表示：「我希望这些样本就是客户想要的，我们真的需要这笔生意。」 The panel leader is on a deadline to develop a new product for a new large customer and tells his panel, "I hope these samples are what they are looking for, we could really use the business."	该评估小组不应该在评估前接收到有关产品或期望结果的讯息。 The panel should receive no prior information about the product or desired outcomes.	p.33
适应 Adaptation	短期内过度接触可能会导致品鉴者对该刺激的敏感度暂时性降低。 Short-term overexposure can lead to a temporary reduction in taster sensitivity to that stimulus.	在进行当天的第五次杯测时，品鉴者表示：「我不知道，这些咖啡似乎不如今天早些的咖啡来得香。」 During the fifth cupping of the day..."I don't know, these coffees don't seem as aromatic as the coffees from earlier today."	要遵守良好的杯测规范，在每场杯测会上品鉴合理数量的样本、休息并适度清洁味蕾。 Adhere to a good test protocol, taste a reasonable number of samples in each session, take breaks, and cleanse the palate.	p.33

习惯化 Habituation	长期接触相同的感官刺激后，敏感度会降低。（常见于品管评估小组） Loss of sensitivity after long-term exposure to a given sensory stimulus (common in QC panels).	在经过三年专门杯测具有果香的咖啡后，品鉴者表示：「还记得这些咖啡以前多么果香吗？现在我顶多会称这些咖啡算是中度果香。」（事实上，客观地来说它们与第一年具有相同程度的果香） During the third year of cupping exclusively fruity coffees..."Remember when these coffees used to be really fruity? I'd call these moderately fruity at best." (The reality is they are objectively just as fruity as during the first year).	尝试品鉴具有典型与极端特质的新参考产品。 Taste new reference products with typical and extreme qualities.	p.33
暗示效应，或来自其他评估员的影响 Suggestion Effect or "Influence from Other Assessors"	评论或行为可以影响其他评估小组成员。 Comments or behavior can influence other panelists.	如果某位主管说：「样本 A 极具香气」，其他评估小组成员也有可能跟从。 If a supervisor says, "Sample A is so aromatic," the other panelists are likely to follow.	遵守安静工作的法则。训练评估小组成员避免做出偏误的陈述或非口语的提示。 Observe the rule of silent work. Train panelists to avoid making biasing statements or non-verbal cues.	p.33
刺激误差 Stimulus Error	当评估员接收关于测试目标或产品身份的讯息，会影响他们的评估。 When the assessors receive information about test objectives or product identities that influence their evaluation.	你知道所有杯测的咖啡均为肯尼亚的咖啡，而且您也热爱肯尼亚咖啡。 You know that all the coffees in a cupping are Kenyan coffees and you love Kenyan coffees.	应保持标准的呈现方式，且勿让评估员知道该样本的背景信息。 Keep a standard format for presentation and do not let assessors know background information of the samples.	p.32
分心因素 Distractions	测试环境中的干扰或不适，会限制评估员专注于完成任务的能力。 Distractions or irritations in the testing environment limit the ability of the assessors to concentrate on the task at hand.	在评估过程中，杯测室内不断响起电话铃声。 A phone keeps ringing in the cupping room during an evaluation.	设计环境以及测试规范应减少分心因素。 Design the environment and testing protocols to limit distractions.	p.33
